

OPERATION MANUAL

AC Servo Drive

FDA7000 Series

Ver 1.4 (Soft. Ver. 1.15 ~)

FDA7000 Series

Servo Drive User Manual

Essential notes before use**A. Checking Motor ID certainly.**

: Enter the motor ID indicated on the motor name plate to the parameter of “P01-01”.

For details on the motor ID, refer to Chapter 3 of this manual.

B. Checking Drive AMP-Type certainly.

AMP-Type [FDA70-]	01	02	04/ 04B	05	08	10	15/ 15B	20/ 20B	30/ 30B	45
P01-11 [Drive ID]	1	2	4	5	8	10	15	20	30	45

C. Checking Encoder ID certainly.

Encoder Type	Manual setting	INC 2000	INC 2500	INC 3000	INC 5000	INC 6000	INC 2048	ABS 11/ 13bit	INC 17/ 33bit	ABS 17/ 33bit
P01-12 [Encoder ID]	Enc-0	Enc-A	Enc-b	Enc-C	Enc-d	Enc-E	Enc-F	Enc-G	Enc-P	Enc-R

♥ When you set the encoder ID to “Enc-0”, you can change the value of P01-13 (Encoder pulse rate). But if you set the encoder ID to “Enc-A ~ Enc-R”, you cannot change the value of P01-13.

D. Operate servo system after autotuning is off. (P02-17)

: Always cancel the autotuning during normal operation after gain setting using autotuning.

E. Motor handling

: Avoid impacting to the encoder in connecting coupling to the Motor shaft or operating.

F. Recommended specification of Encoder wiring.

Encoder type	Page of wiring explanation
Incremental encoder	2-13
Absolute encoder 11bit	2-14
Absolute/Incremental encoder 17bit	2-15

G . Separate GND24 (CN1-24, 25) and GND (CN1-1, 8, 26, 33, 34, 36).

: When connect commonness, malfunction of servo drive and burnout can occur.

H . Treatment of the servo motor attached holding brake .

: The brake built in the servo motor is a normal closed type brake. Which is used only to hold and can not be used for braking. Use the holding brake only to hold a stopped servo motor.

I. Do not supply AC at N, P connector when connect the power line to Small and Medium capacity servo drive.

: If main power is DC power, because N connector (-) voltage and P connector (+) voltage, burnout of servo drive when N, P connector is supplied AC power.

Choose positively necessary AC and DC power, and use.

Chapter 1

Model check and handling

Chapter 1 explains the details to check before using the servo drive and motor that you have purchased. Before assembling the product, check whether name plate is as ordered. Mishandling can disable normal operation or can significantly reduce the operating life depending on the situation. Because it can damage the servo in the worst case, please read the details and precautions of each article for handling.

1.1 Model check.....	1-1
1.2 Servo drive specification.....	1-2
1.3 Combination table of servo drive and motor	1-3

1. Model check and handling

HIDEN^s

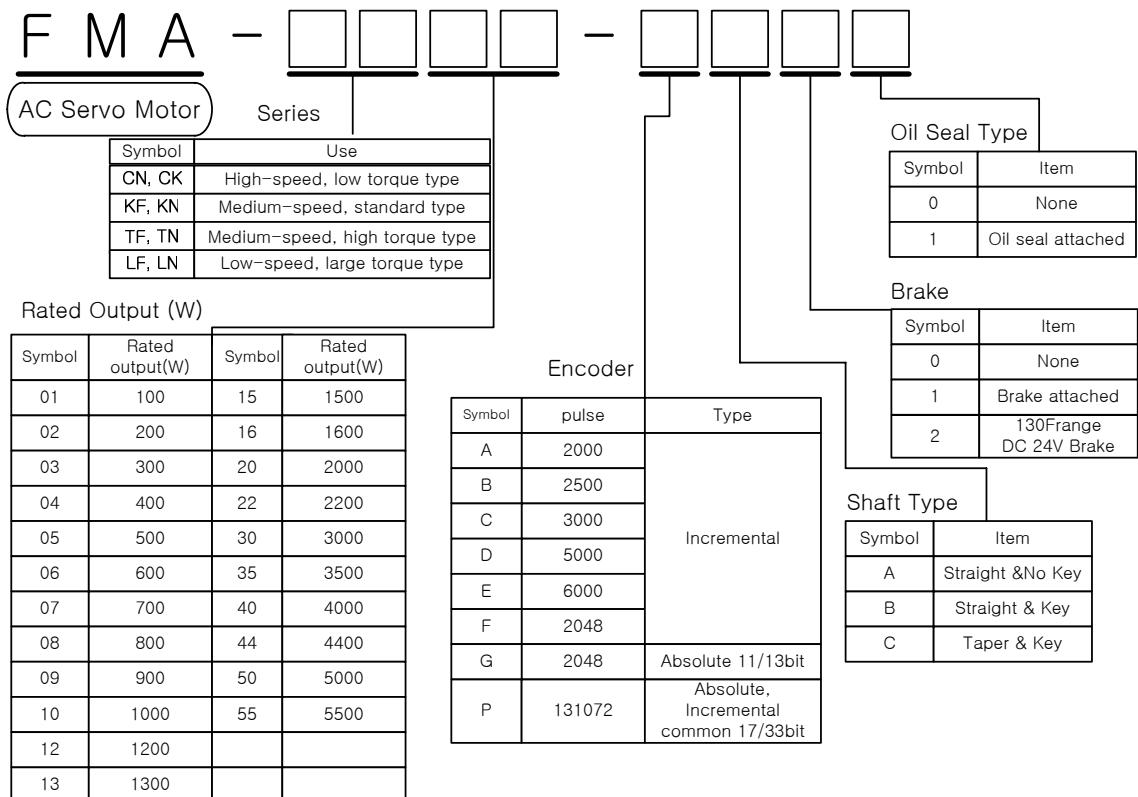

1.1 Model check

1.1.1 Servo drive model classification

(Note) Since the drive models for serial and general incremental encoder are separated as shown above, please check the model name before using the product.

1.1.2 Servo motor model classification

1. Model check and handling

HIDEN^s

1.2 Servo drive specification

Servo Drive [FDA70-]		01	02	04/ 04B	05	08	10	15/ 15B	20/ 20B	30/ 30B	45											
Main circuit power	Input voltage, frequency (Note) 1	3 phase AC200~230V, 50/60Hz ± 5% Single phase AC230V, 50/60Hz ± 5%					3 phase AC200~230V, 50/60Hz ± 5%															
	Permitted voltage variance rate	3 phase AC170 ~ 253V (Input voltage range +10/-15%) 2 phase AC207 ~ 253V (Input voltage range +10/-10%)					3 phase AC170 ~ 253V (Input voltage range +10/-15%)															
Control circuit power	Input voltage, frequency	No separate input part	Single phase AC200~230V, 50/60Hz ± 5%																			
	Permitted voltage variance rate		Single phase AC170 ~ 253V (Input voltage range +10/-15%)																			
Detector	Detector type	17/33 bit serial encoder, 11/13 bit absolute encoder, incremental 2000 ~ 6000 [ppr] 15 line type																				
	Output signal type	Differential Line Driver output																				
	Detector accuracy	Maximum of 131072 [pulse] per 1 encoder revolution																				
	Detector power	DC 5[V], 0.3 [A] or below																				
Drive system		Sine wave PWM control (IPM use)																				
Speed control specific ation	Speed control range	Internal speed command 1:5000, analog speed command 1:2000																				
	Frequency response characteristics	600 [Hz]																				
	Speed command input	DC 0 ~±10 [V], maximum speed (Can be adjusted with parameter)																				
	Speed fluctuation rate	± 0.01 % or below (Rated load: 0 ~ 100 %) ± 0.01 % or below (Rated power voltage: ± 10 %) ± 0.1 % or below (Temperature variance : 25 ± 25 °C)																				
	Acceleration /deceleration time	Straight, S type acceleration/deceleration possible (0 ~ 100 [sec])																				
Position control specific ation	Position input frequency	500 [kpps]																				
	Position input type	Direction + Pulse, CW pulse + CCW pulse 2 phase pulse (A phase + B phase)																				
	Position input method	Open Collector, Line Driver method																				
Torque control specific ation	Torque command input	DC 0~±10 [V], maximum command (Can be adjusted with parameter)																				
	Torque linearity	4 [%] or below																				
	Limited speed command	DC 0~±10[V] , maximum speed (Can be adjusted with parameter)																				
Internal function	Protection function	Over-current, recovery over-voltage, over-load, motor mis-wiring, Encoder problem, insufficient voltage, over-speed, over-tolerance etc.																				
	Regenerated resistance(W/Ω)	50/50	70/50			250/25			500/12.5													
	Monitor output	Speed, torque (-5 ~ +5 [V])																				
	Dynamic brake	Built in																				
	Additional function	Test function (Jog and no motor operation), alarm record, CW/CCW revolution, encoder signal division output																				
Option		Motor power cable, Encoder cable, CN1 connector, CN2 connector																				
		Digital loader																				
Environmental specific ation	Operating ambient temperature	0 ~ 50 [°C] (There should be no freezing)																				
	Ambient humidity	90[%] or below (There should be no steam)																				
	Storage temperature	-20 ~ +80 [°C]																				
	Insulating resistance	DC 500[V] 10 [MΩ] or above																				
Weight(Kg)		1.0	1.0	1.5	1.9	1.9	1.9	4.3	4.4	4.5	4.6											

(Note) 1 This indicates the input voltage and frequency range that assures the motor rated output and rated revolution speed. This is not assured during voltage drops.

1. Model check and handling

* “[04E]” and “[05E]” drive models are for a more precise torque and speed position control, and categorized as specially ordered product. The motors that can be applied to “[04E]” and “[05E]” drive model are limited to the motors within the [], and for more details, please contact your point of purchase.

1.4 Installation

1.4.1 Installation of servo drive

1) Operating environment

Ambient temperature	0-50°C (There should be no freezing) Note)
Ambient humidity	90% RH or lower (There should be no vapor)

Note) Inside control panel temperature specifications : To ensure maximum operating life and reliability of the drive, maintain the average control panel temperature at 40°C or lower.

2) Installation direction and intervals

- Install FDA7000 can be seen from the front.
- If the drives are installed in a closed control panel, maintain an interval of more than 10 mm between drives and more than 40 mm between top and bottom. If multiple number of control panels are installed in parallel, about 100 mm space is required on the upper side. In case of installing fans, avoid heat.
- Regenerative resistor, heating source, away from the drive.

3) Prevention of ingress of dust

- Exercise caution when drilling control panels to prevent chips produced by drilling from getting into the drive.
- Take appropriate measures to prevent oils, water and metal powder from getting into the drive from openings in the control panels and the fan installed on the ceiling.
- If the drive is used in a place with large amount of toxic gases and dust, protect the drive with an air purge.

1.3.2 Servo motor installation

1) Operating environment

Ambient temperature	0-40°C (There should be no freezing)
Ambient humidity	80% RH or lower (There should be no vapor)
External vibration	X, Y = 19.6 m/s ² (2G)

2) Caution when assembling load system (Prevent impact on shaft)

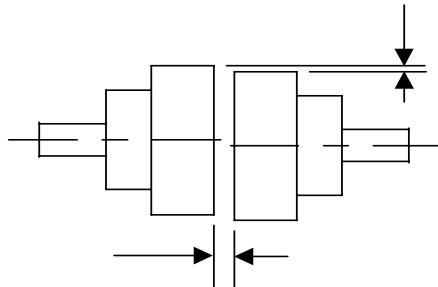

It is important to accurately match the motor shaft with the shaft center of the connecting

1. Model check and handling

HIDEN®

machine. Mismatched shaft center causes vibration, and may cause damage to the bearing. Use a rubber hammer to install couplings to prevent excessive force from being applied to the shaft and bearing.

Check 4 places in turn. The difference between maximum and minimum should be 0.03 or lower.

3) Load tolerance on shaft

- Use flexible couplings, and maintain the shaft center deviations within the specified tolerance.
- Use pulleys and sprockets with the allowable load.

MOTOR MODEL		RADIAL LOAD		AXIAL LOAD		REFERENCE DIAGRAM
Series	Type	N	Kgf	N	kgf	
CN	CN01~CN05	196	20	68	7	
	CN06~CN08	245	25	98	10	
	CN09~CN15	490	50	196	20	
	CN20~CN30	686	70	343	35	
	CN30A~CN50A	1470	150	490	50	
KN	KN03~KN07	245	25	98	10	
	KF08~KN11	490	50	196	20	
	KF15~KN22	686	70	343	35	
	KN22A~KN55	1470	150	490	50	
TN	TN05~TN09	490	50	196	20	
	TN13~TN17	686	70	343	35	
	TN20~TN75	1470	150	490	50	
LN	LN03~LN06	490	50	196	20	
	LN09~LN12	686	70	343	35	
	LN12A~LN40	1470	150	490	50	
KF	KF08~KF10	490	50	196	20	
	KF15	686	70	343	35	
	KF22~KF50	1470	150	490	50	
TF	TF05~TF09	490	50	196	20	
	TF13	686	70	343	35	
	TF20~TF44	1470	150	490	50	
LF	LF03~LF06	490	50	196	20	
	LF09	686	70	343	35	
	LF12~LF30	1470	150	490	50	

4) Accuracy of attachments

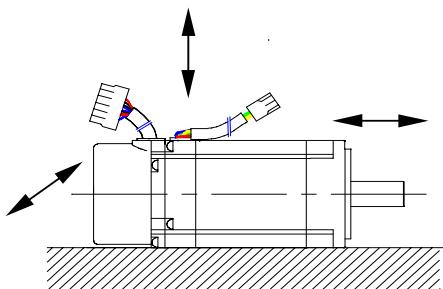

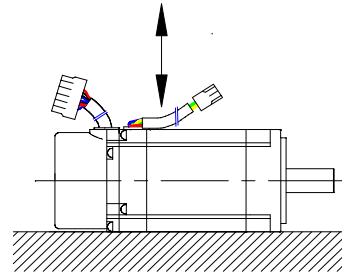

The accuracies of the shaft and attachments of the AC servo motor are shown on the following table.

Item	Accuracy (T.I.R.)	Reference Diagram
Perpendicularity of flange attachment plane and output shaft (A)	0.04mm	
Eccentricity of flange fitting outer diameter (B)		
Vibration of shaft end (C)		

(Note) T.I.R : Total Indicator Reading

5) Impact resistance

The AC servo motor withstands two times of impacts with an acceleration of 10G when up-and-down impacts are applied after setting the motor shaft horizontally. However, a precision detector is attached to the end of the shaft on the opposite side of the load, take caution not to apply impact directly to this end.

6) Vibration resistance

The AC servo motor withstands a vibration acceleration of 2.0G when vibration is applied in up and down, left and right, and front and back directions after setting the motor shaft horizontally.

7) Vibration grade

The vibration grade of the AC servo motor is V15 at the rated rpm.

8) Direction of installation

- Motor can be installed horizontally or at the top or bottom of the shaft.
- Keep the motor cable downward.
- If the motor is installed vertically, install a cable trap so that oils or water do not flow into the motor.

- 9) Cable disconnection
 - Take caution not to stress or damage to the cables.
 - If the motor is used as a mobile motor, use flexible cables.

1.5 Handling

1.5.1 Handling precaution

: Mishandling can lead to unexpected accidents or damage. The key items are listed as follows. Reference the related details and use the drive correctly.

1) Handling

- Do not apply any pressure to the encoder which is the motor detector.
Hitting the shaft with a hammer or falling can cause damages.
- Do not directly connect commercial power (AC220V) to the motor. Over-current can reduce the magnetic efficiency of the motor. Always connect to the defined servo drive for operation.

2) Wiring

- Connect the grounding terminal of the drive and motor to the drive side and ground all at once to the closest point. Use the class-3 earth (100Ω or below) to prevent electric shock and mis-operation.
- The U, V, W and FG terminal of the drive and motor must be aligned. Because the 2 lines are replaced with the commonly used motor, the rotating direction cannot be changed.
- If you connect the commercial power to the U, V, W and FG terminal of the drive, it can be damaged.
- Connect the 200V level power to the R, S and T terminal and the power besides the 200V level must be installed with a transformer.
- Always connect the standard regenerated resistance to the P and B terminal of the drive.

Chapter 2

Wiring and connection

Chapter 2 explains the main circuit wiring, I/O signal connection examples and connection to peripheral devices of the servo drive.

2.1 Main circuit and peripheral device connection.....	2-1
2.2 Main circuit terminal.....	2-3
2.3 CN1 I/O signal explanation.....	2-8
2.4 CN2 wiring and signal explanation	2-13

2.1 Main circuit and peripheral device connection

This part explains the peripheral device and main circuit wiring. Keep the following danger and caution details during wiring.

Danger

- Do not open the surface cover when connecting the power or during operation. It can cause electric shock.
- Do not operate the drive when the surface cover is removed.
It can cause electric shock because the high voltage terminal and charge part are exposed.
- Even when the power is turned off, do not remove the surface cover unless it is for wiring or periodic check.
It can cause electric shock because the inside of the servo drive is charged.
- Execute the wiring work and check more than 10 minutes after the power has been disconnected and checked of the voltage with tester etc.
- Ground the grounding terminal of the drive and motor both to the drive side and ground at once in the closest point.
To protect electric shock and mis-operation, use at least class-3 ground ($100\ \Omega$ max.).
- The wiring work and checking work must be executed by specialized technician.
- The wiring must be done after the main unit is installed. It can cause electric shock or injury.
- Do not operate the key with wet hands. It can cause electric shock or injury.
- Make sure you do not damage the wire, apply excessive stress on the wire, put heavy object on top of the wire or have the wire pressed again an object. It can cause electric shock or injury.

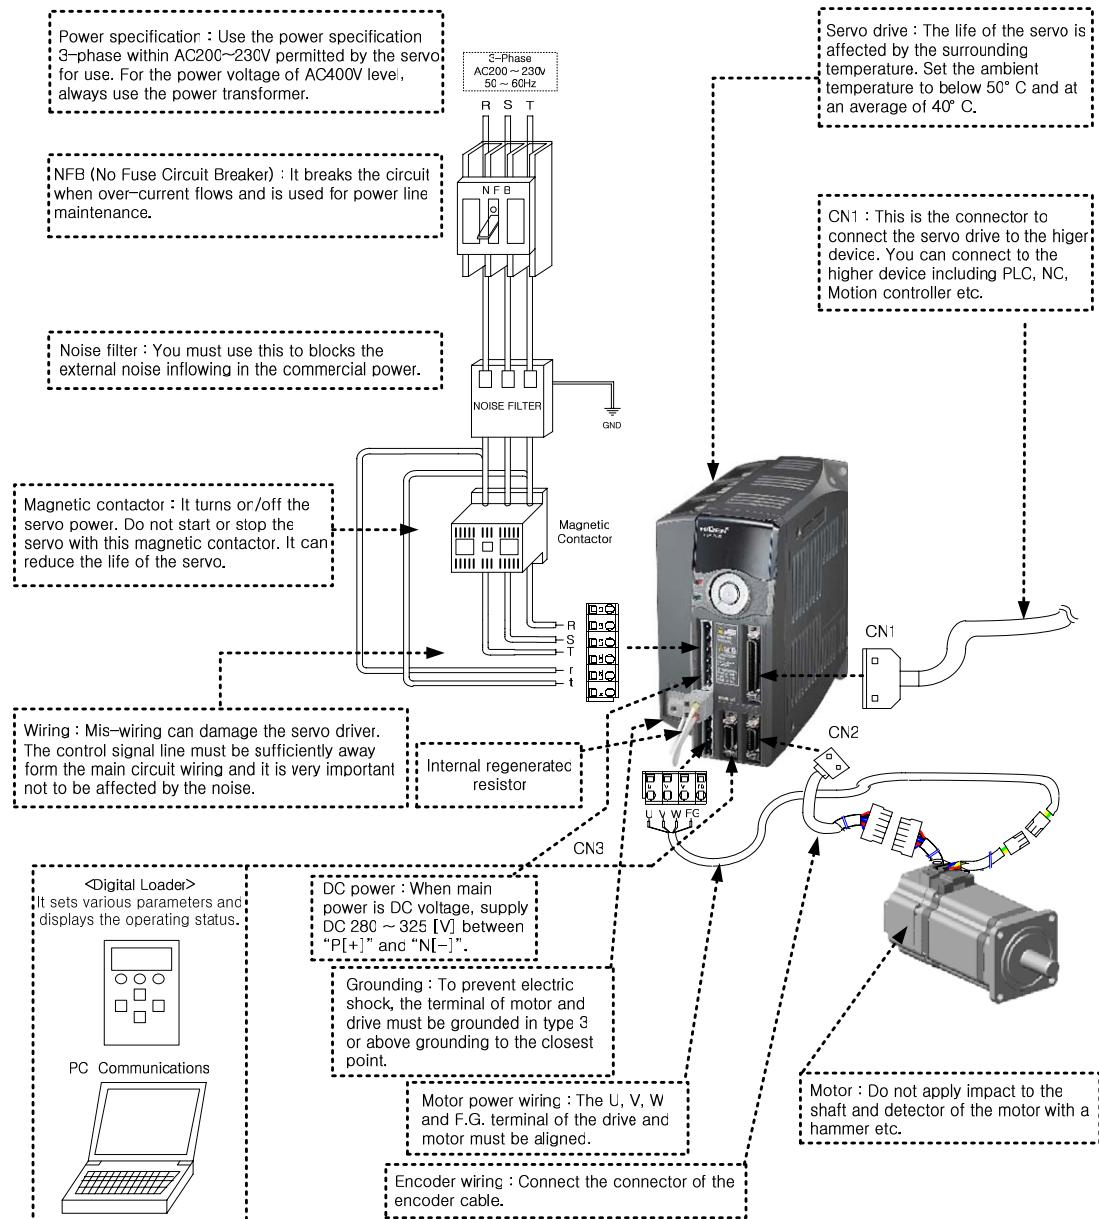

Caution

- Use wiring that complies with the standard. Otherwise, the servo motor may not operate.
- Do not install power condenser, surge absorber or radio noise filter on the output side of the servo drive.
- Correctly connect the output side (Terminal U,V,W,FG), or the motor can operate abnormally.
- When attaching the DC relay for control output signal on the control output signal part, be careful of the diode direction for surge absorption. The signal may not be outputted due to problems and the protection circuit will not operate during emergency stop. For diode direction, refer to the user manual.

2. Wiring and connection

HIDEN^s

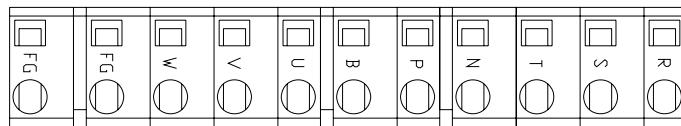

2.1.1 Main circuit and peripheral device connection

- ◆ At the U, V and W terminal, connect the U, V and W phase of the servo motor.
- ◆ Ground the FG terminal. Connect the grounding wire of the servo motor with this terminal.
- ◆ When main supply is DC voltage, supply DC280~325[V] between “P[+]” and “N[-]”.
- ◆ Don't supply AC power supply between “P[+]” and “N[-]”.

2.2 Main circuit terminal

2.2.1 Small type terminal connection

[FDA7001 ~ FDA7002 connection terminal]

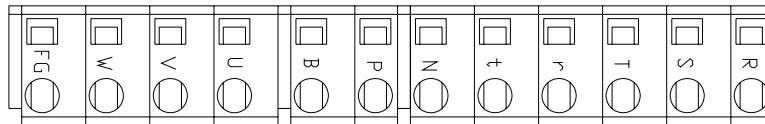

The usage and wiring method of FDA7001~FDA7002 are as follows.

- 1) As the main power of the power circuit, connect the R,S and T terminal to 3 phase AC200~230[V]. It is possible to use 2 phase 220V, then the output is lower than rated.
- 2) Connect the regenerated resistance between the terminals P and B.
- 3) At the U, V and W terminal, connect the U, V and W phase of the servo motor.
- 4) Ground the FG terminal. Connect the grounding wire of the servo motor with this terminal.
- 5) When main power is DC voltage, supply DC280~325[V] between “P[+]” and “N[-]”.
- 6) Don't supply AC power between “P[+]” and “N[-]”.

AC SERVO Operating device	FDA7001	FDA7002
Wire thickness	AWG #16(1.25mm ²)	
Open/close device	GMC-12(13A) level product	
Breaker	ABS33b(5A) level product	
Noise filter	NFZ-4030SG(30A)	
External regenerated resistance	50W 50Ω	

- ♥ Open/close device and breaker : LS Industrial Systems, <http://www.lsisc.biz>
- ♥ Noise filter : Samil Components, <http://www.samilemc.com>

2.2.2 Medium type terminal connection

[FDA7004/7004B ~ FDA7010 connection terminal]

The usage and wiring method of FDA7004/7004B~FDA70010 are as follows.

- 1) As the main power of the power circuit, connect the R,S and T terminal to 3 phase AC200~230[V].**
- 2) As the auxiliary power of the power circuit, connect the r and t terminal to single phase AC200 ~ 230[V].**
- 3) Connect the recovery resistance of internal type during shipment between the terminals P and B.**
- 4) At the U, V and W terminal, connect the U, V and W phase of the servo motor.**
- 5) Ground the FG terminal. Connect the grounding wire of the servo motor with this terminal.**
- 6) When main power is DC voltage, supply DC280~325[V] between “P[+]” and “N[-]”.**
- 7) Don't supply AC power between “P[+]” and “N[-]”.**

AC SERVO Operating device	FDA7004B	FDA7004	FDA7005	FDA7008/ FDA7010
Wire thickness	AWG #16(1.25mm ²)	AWG #14 (2.0mm ²)	AWG #12 (3.5mm ²)	
Open/close device	GMC-12(13A) level product		GMC-40(35A) level product	
Breaker	ABS33b(5A) level product			ABS33b (10A) level product
Noise filter	NFZ-4030SG(30A)			
Regenerated resistance	50W 50Ω External resister	70W 50Ω Internal resister		

♥ Open/close device and Breaker : LS Industrial Systems, <http://www.lsis.biz>

♥ Noise filter : Samil Components, <http://www.samilemc.com>

2. Wiring and connection

HIDEN^s

※ For the wiring of small/medium capacity socket, execute in the following order.

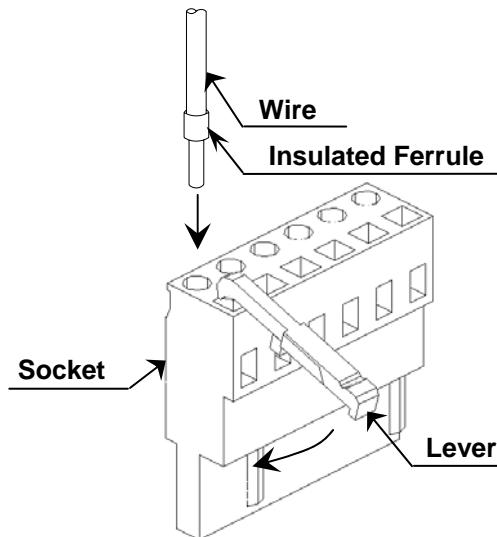

- ⓐ After checking the wire thickness indicated in 2.2.1, remove the wire coating.

- The coating of the wire to be used should be 8 ~ 9mm or less.
- The thickness of the wire permitted by the socket is as follows.

Wire type	Permitted wire thickness
Single wire	φ0.5 ~ φ0.8[mm]
Twisted wire	AWG28 ~ AWG12

- ⓑ Even though you can use the wire as is after removing the coating, for safety purposes put a ferrule end to press with the crimping tool for ferrules insulated.

- ⓒ Open the terminal (plug) wire inserting hole with the lever as shown in the following picture.

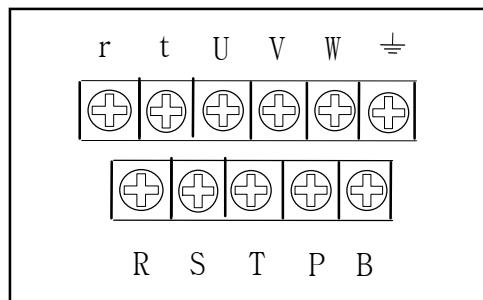

- ⓓ Insert the core part of the wire to the opening part. Release the lever after inserting the wire.

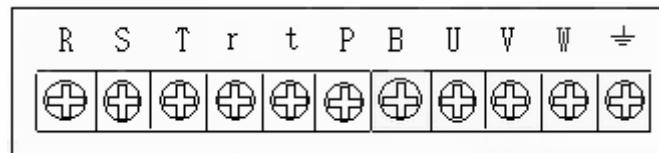

- ⓔ Lightly pull it out to see whether there is any problem in the connected condition of the socket and the wire.

- ⓕ When the coating of the wire is not completely inserted, it can cause electric shock.
Therefore check whether there are any exposed core wires.

2.2.3 Large type terminal connection

[FDA7015 ~ FDA7045 connection terminal]

[FDA7015B ~ FDA7030B connection terminal]

The usage and wiring method of FDA7015~FDA7045, FDA7015B~FDA7030B are as follows.

- 1) As the main power of the power circuit, connect the R,S and T terminal to 3 phase AC200~230[V].
- 2) As the auxiliary power of the power circuit, connect the r and t terminal to single phase AC200 ~ 230[V].
- 3) Connect the regenerated resistance between the terminals P and B.
- 4) At the U, V and W terminal, connect the U, V and W phase of the servo motor.
- 5) Ground the FG terminal. Connect the grounding wire of the servo motor with this terminal.

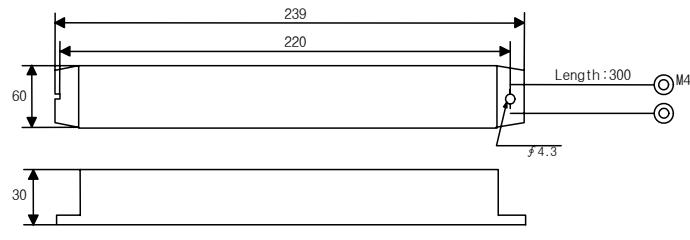

2. Wiring and connection

HIDEN^s

AC SERVO operating device	FDA7015/ FDA7015B	FDA7020/ FDA7020B	FDA7030/ FDA7030B	FDA7045

2.3 CN1 I/O signal explanation

2.3.1 CN1 terminal arrangement

CN1 is the connector located on the top right part of the front side of the servo device. This connector is used for connecting the host controller that commands the operating device and the operation.

The pin arrangement and name of the CN1 connector are as shown in the following picture.

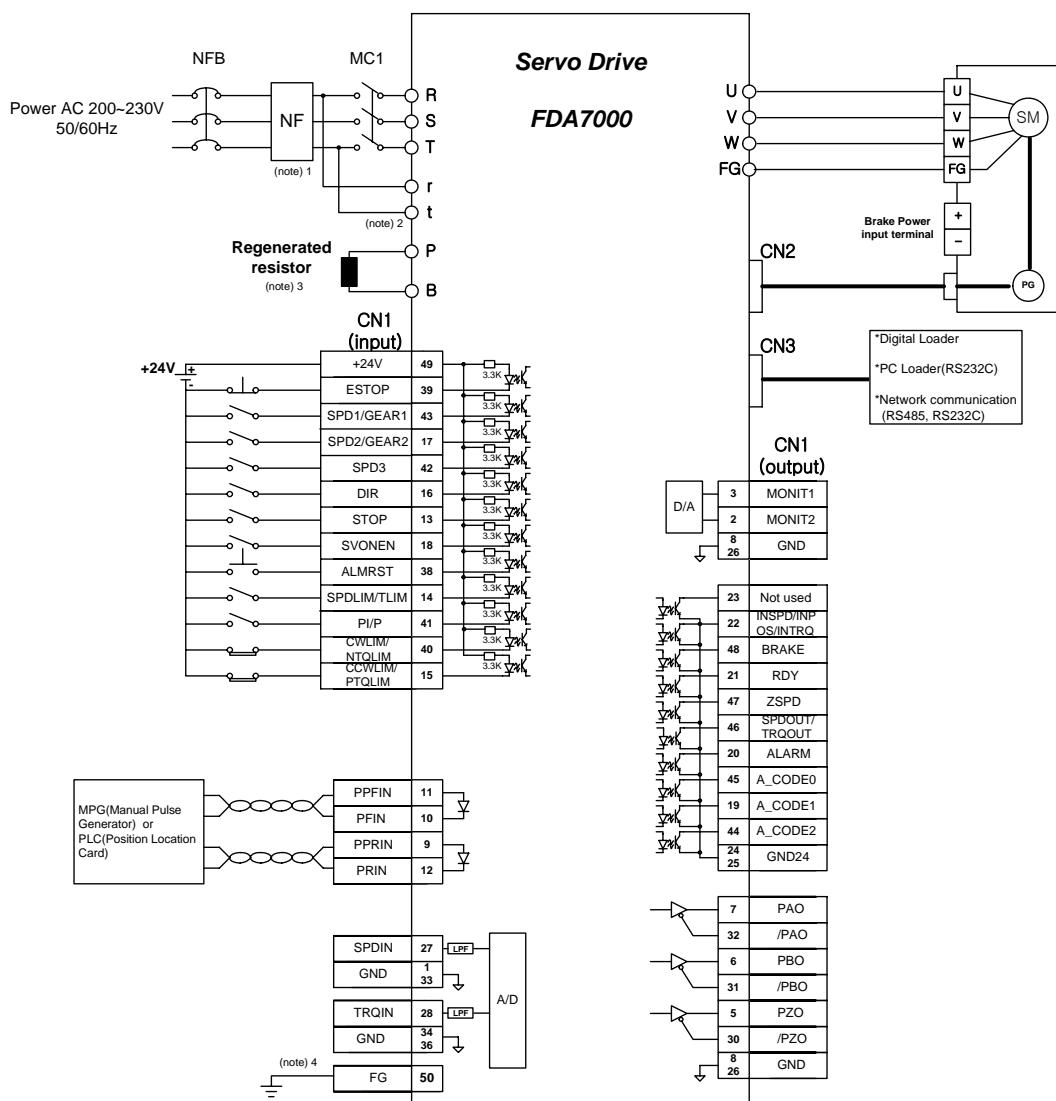

2	MONIT2	1	GND	26	GND
4	BAT-	3	MONIT1	28	TRQIN
6	PBO	5	PZO	30	/PZO
8	GND	7	PAO	32	/PAO
10	PFIN	9	PPRIN	34	GND
12	PRIN	11	PPFIN	36	GND
14	SPDLIM/ TLIM	13	STOP	38	ALMRST
16	DIR	15	CCWLIM/ PTQLIM	40	CWLIM/ NTQLIM
18	SVONEN	17	SPD2/ GEAR2	42	SPD3
20	ALARM	19	A_CODE1	44	A_CODE2
22	INSPD/INP OS/INTRQ	21	RDY	46	SPDOUT/ TRQOUT
24	GND24	23	-	48	BRAKE
		25	GND24	50	FG

- ♥ The above table indicates the reference signal of manufactured default. For the function of partial pin among the signals, the signal allocation can be changed in P07 mode (input function setting) and P08 mode (output function setting).
- ◆ The connector for CN1 is optional.
 - Manufacturer: 3M, CASE product name: 10350-52F0-008
 - Connector (for soldering) : 10150-3000VE

2. Wiring and connection

HIDEN^s

2.3.2 CN1 I/O wiring

(Note) 1: NF stands for Noise Filter and it must be used to prevent the noise from intruding from the outside.

(Note) 2 : For the FDA7004/7004B~45 type, connect the single phase AC220V[V] to the r, t terminal, auxiliary power.

FDA7001~02 type does not have the supplementary power r, t terminal.

(Note) 3: The recovery resistances of FDA7004~FDA7010 are installed inside the driver as an internal type. The regenerated resistance of the FDA7001, 7002, 7004B, FDA7015 type or above is the separately installed type, check the capacity and apply accordingly.

(Note) 4: Connect the ground wire of CN1 cable to the F.G. (Frame Ground) terminal.

2.3.3 Variable input signal function table (Based on manufactured default)

Signal content	Term	Pin No.	Function and usage explanation
Servo drive Enable	SVONEN	18	It decides whether the servo motor can be operated or not. (ON: Enable OFF: not Enable)
Speed selection 1/ Electronic gear selection 1/	SPD1/ GEAR1/	43	- Internal command speed selection by 3 signal (SPD1, SPD2, SPD3) combination Speed control - Electronic gear ratio selection by 2 signal (GEAR1, GEAR2) combination Position control
Speed selection 2/ Electronic gear selection 2/	SPD2/ GEAR2/	17	
Speed selection 3	SPD3	42	
Direction selection	DIR	16	Selects the Speed/Position/Torque input direction. (OFF: Positive direction selected ON: Negative direction selected)
CCW limit / Positive torque limit	CCWLIM/ PTQLIM	15	Limit signal input on CCW (Speed control)/ Positive torque generation prohibited (Torque control) (ON: Cancel OFF: Prohibited)
CW limit / Negative torque limit	CWLIM/ NTQLIM	40	Limit signal input on CW (Speed control)/ Negative torque generation prohibited (Torque control) (ON: Cancel OFF: Prohibited)
Speed limit / Torque limit	SPDLIM/T LIM	14	Speed limit use input contact point (Torque control)/ Selects whether to use torque limit (Analog torque input and digital torque input can be used according to the combination of TRQ1, TRQ2 and TRQ3 Speed control.)
Alarm reset	ALMRST	38	This cancels the alarm condition.
Emergency stop	ESTOP	39	In case of external emergency, it overrides all input condition of the servo drive and quickly decelerates the motor to free run the motor. You can select the ON/OFF contact point in parameter P02-26.
PI/P control	PI/P	41	It selects the type of speed controller. (OFF:PI control ON:P control)
Stop/Start	STOP	13	It starts or stops the motor operation. You can select the ON/OFF contact point in parameter P02-25. ※ When setting P02-25 to "OFF" (Close: Stop Open: Start)

♥ For details on the input contact point function change, refer to the P07 mode of Chapter 3.

2.3.4 Variable output signal function table (Based on manufactured default)

Signal content	Name	Pin number	Function and usage explanation
-	-	23	You can directly set the input contact point function from P7-01. (Manufactured default : Not use)
Brake operation	BRAKE	48	This is the output signal to operate the external brake. When on, the brake power is supplied to enable motor operation.
Servo ready	RDY	21	No alarm, power good condition when the power is on.
Speed/Position /Torque reach completion	INSPD/INP OS/INTRQ	22	It goes on when it reaches the commanded Speed/Position/Torque.
Speed/torque limiting	SPDOUT/ TRQOUT	46	When used for speed control mode, it indicates the condition of the torque the servo motor is limiting. When used for torque control mode, it indicates the condition of the speed the servo motor is limiting.
Zero speed condition	ZSPD	47	This indicates the stopped condition of the servo motor.
Alarm condition	ALARM	20	When the alarm is detected, it goes off. During normal operation, it goes on.
Alarm 0 CODE	A_CODE0	45	It outputs alarm CODE0.
Alarm 1 CODE	A_CODE1	19	It outputs alarm CODE1.
Alarm 2 CODE	A_CODE2	44	It outputs alarm CODE2.

♥ For details on the output contact point function change, refer to the P08 mode of Chapter 3.

2.3.5 Fixed I/O signal function table

Signal content	Name	Pin number	Function and usage explanation
F+ input pulse F- input pulse R+ input pulse R- input pulse	PPFIN PFIN PPRIN PRIN	11 10 9 12	Depending on the set value of pulse logic, it receives and operates according to the specific position command type of negative or positive logic. Refer to Chapter 3 for details of the pulse type.
Analog speed command	SPDIN	27	When operating in speed mode, enter the analog speed command.
Analog speed limit			When operating in torque mode, enter the analog speed limit.

2. Wiring and connection

HIDEN^s

Analog torque command	TRQIN	28	When operating in torque mode, enter the analog torque command.
Analog torque limit			When operating in speed mode, enter the torque limit.
Monitor output 1	MONIT1	3	Designated variable value is outputted in 0~±5[V] range through the DA converter. [Monitor selection] 0: Speed, 1: Speed command, 2: Torque, 3: Torque command, 4: Pulse, 5: Command pulse
Monitor output 2	MONIT2	2	Designated variable value is outputted in 0~±5[V] range through the DA converter. [Monitor selection] 0: Speed, 1: Speed command, 2: Torque, 3: Torque command, 4: Pulse, 5: Command pulse
Encoder output	PAO,/PAO PBO,/PBO PZO,/PZO	7,32 6,31 5,30	After dividing the motor encoder signal from CN2 as much as the division rate set in the division setting menu, it outputs in line drive method.
+24[V] Power input	+24VIN	49	As the external I/O contact point power, enter +24[VDC]±10% 1.0[A] or above for the external power. (User preparation) ◆ When using the I/O contact point power simultaneously, recalculate the power capacity according to the output contact points.
+24[V] GND	GND24	24 25	Connect the ground of power+24[VDC]±10% for external I/O contact point. (User preparation)
0[V]	GND	1,8 26,33 34,36	Common power ground terminal of speed, command, torque limit command, speed, torque monitor output, encoder output terminal.
Battery + Battery -	BAT+ BAT-	29 4	When using the absolute encoder, connect the battery from the host controller. Do not connect the drive side and both sides of the host controller.
+12[V] output -12[V] output	+12 -12	35 37	When simply outputting speed command and torque limit, use the ±12[V] power.
FRAME GROUND	FG	50	Ground the cable ground wire of CN1.

♥ Function of fixed I/O contact point cannot be changed.

2.4 CN2 wiring and signal explanation

CN2 is the connector located on the bottom right side of the front cover of the servo drive. This connector is used for connecting the servo drive and the encoder of the servo motor. The PIN arrangement shown from the connector in the user's point of view is as follows. The encoder signals may differ depending on the type of encoder.

2.4.1 Incremental encoder

2	/PW	1	PW	11	/PZ
4	/PV	3	PV	13	/PB
6	/PU	5	PU	15	/PA
8		7		17	
10		9	GND	19	Vcc
				20	

[Based on soldering side of user connector]

- ◆ Connector for CN2 is optional.
 - Manufacturer : 3M, CASE product name : 10320-52F0-008,
 - Connector (For soldering) : 10120-3000VE

The 15 line type incremental encoder arrangement of CN2 and FMA-Series AC servo motor is shown as the following table.

CN2 PIN No. (Drive)	Signal name (Drive)	MOTOR(□60,80series) Connector pin No. for encoder.	MOTOR(□130,180series) Connector pin No. for encoder.
1	PW	11	P

- ♥ Connect the grounding wire of the encoder wiring cable for F.G
- ♥ Applied cable specification: AWG24 x 5Pair TWIST,SHIELD CABLE (Maximum length 20m)

2. Wiring and connection

HI-GEN^s

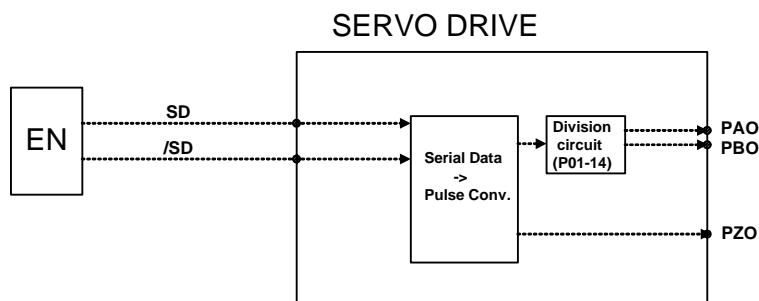

※ A wiring example of CN2 of motor side (□60,80) and FDA7000(A) when applying the 17bit absolute/incremental encoder

- ◆ Applied cable specification: AWG24 x 9Pair TWIST, SHIELD CABLE (Maximum length 20m)
 - ◆ You do not need to connect the incremental 17bit encoder no. 7 (BT+) and no. 8 (BT-) terminals,

2.4.4 17bit absolute encoder data transmission

The output signal of absolute encoder is the incremental division output PAO, /PAO, PBO, PBO, PZO, /PZO

Signal name	Condition	Signal content
PAO	When turning on the power and initializing	Serial data Initial incremental pulse
	During normal operation after initialization is complete	Incremental pulse
PBO	When turning on the power and initializing	Initial incremental pulse
	During normal operation after initialization is complete	Incremental pulse
PZO	Always	Origin pulse

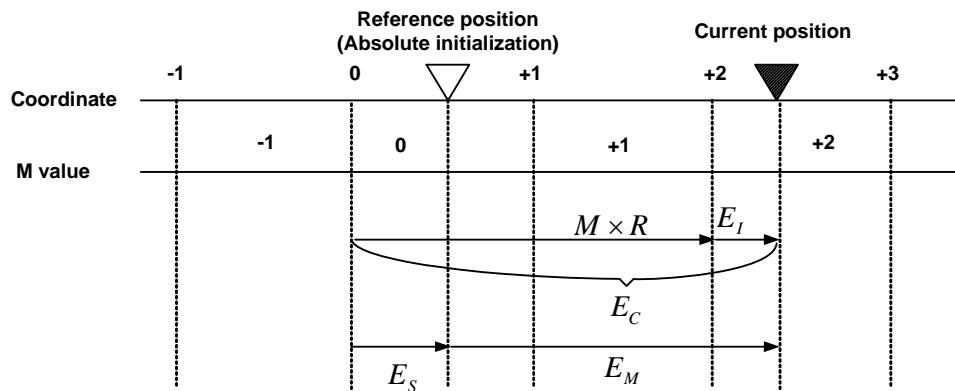

① PAO serial data specification

Data transmission method	Asynchronous
Baud Rate	9600[bps]
Start bit	1 bit
Stop bit	1 bit
Parity	Excellent
Character Code	ASCII Code 7 bit
Data Format	8 Character

♥ Outputted revolution in line 5.

② Absolute data content

- ⓐ Serial data : This indicates where the motor axis is positioned after several revolutions from the reference position (Absolute encoder initialized value).
- ⓑ Initial incremental indication : It outputs the pulse in the same speed as the revolution as about 1250 rpm (17 bit serial encoder application and P01-14=16384(4096[pulse])) from the origin position to current motor position of the motor axis.

* Absolute data E_M is calculated as follows.

$$E_C = M \times R + E_I$$

$$E_M = E_C - E_S$$

E_C : Current position read from encoder

M : Serial data (multi turns data)

E_I : Initial incremental pulse (Generally showed in “-“ value)

E_S : Initial incremental pulse read from absolute encoder initialization point

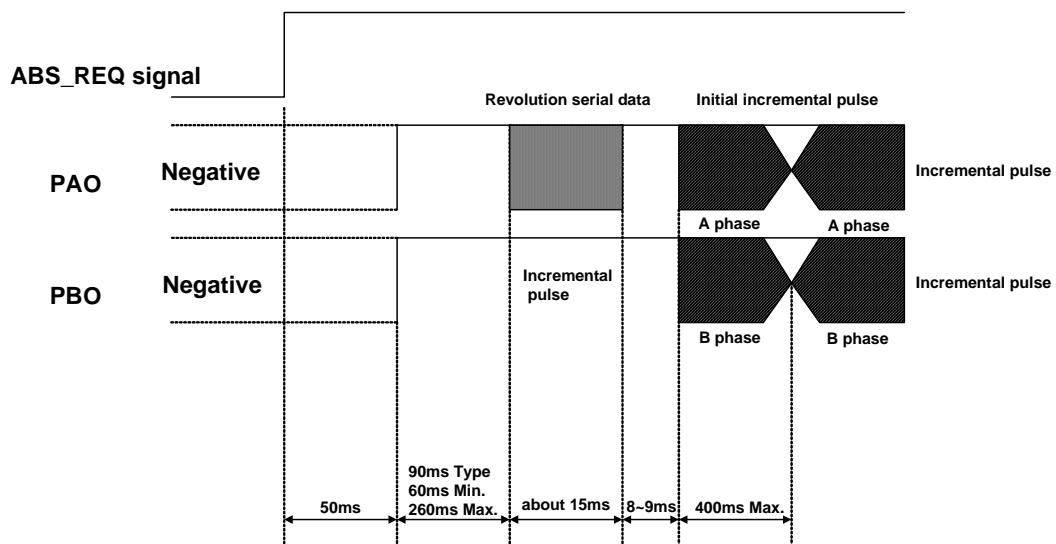

(Generally shown in “-“ value and this value is stored and used in the host controller.)

E_M : Current position necessary from customer system

R : Pulse for 1 encoder revolution (Value with division ratio [P01-14] applied)

③ Absolute data transmission sequence

- ④ a) Maintain the ABS_REQ signal to “H” Level.
- ④ b) After 50ms, it switches to standby condition to receive the serial data. The up/down counter for incremental pulse count is cleared to “0”.
- ④ c) It receives the serial data 8 byte.
- ④ d) After receiving the initial serial data and about 400ms past, it operates as general incremental encoder.

Chapter 3

Parameter setting

Chapter 3 explains the individual servo parameter setting according to the usage. The parameter setting can be executed with the internal mount loader and digital loader, and refer to Chapter 5 for details on how to use the internal mount load and digital loader. The parameter NO. with the symbol (*) marked indicates that the value can only be corrected when the SVONEN input contact point is “OFF”.

3.1 Status display parameter	3-1
3.2 Motor and operating device setting.....	3-5
3.3 General control parameter setting	3-8
3.4 Speed control parameter setting.....	3-15
3.5 Input contact point digital speed and torque setting.....	3-20
3.6 Position control parameter setting	3-21
3.7 Torque control parameter setting	3-23
3.8 Input contact point function setting	3-25
3.9 Output contact point function setting	3-30
3.10 Analog monitor function setting.....	3-35

3.12 Alarm display setting.....	3-38

3. Parameter setting

HIDEN^s

The menu setting can be executed with the digital and internal mount loader. Refer to Chapter 5 for details on how to use the internal mount load and digital loader.

The acronym and meaning used in this manual are as follows.

Acronym	Meaning
PC	Position Controller
CC	Current Controller
SC	Speed Controller
LMT	Limit
ENB	Enable
INIT	Initialize
PROG	Program
CMD	Command
ACCEL	Acceleration
DECCEL	Deceleration
SPD	Speed
POS	Position
COMPEN	Compensation
ABS	Absolute
REV	Revolution
ADJ	Adjustment
MAX	Maximum
TRQ	Torque
MULTI	Multiple
NF	Notch Filter
COM	Communication
TC	Time Constant
FF	Feedforward
ERR	Error
ELCTR	Electric
NUM	Numerator
DEN	Denominator

3.1 Status display parameter

StE-01	Display Select	Unit -	Display range 100~ 1330	Manufactured default 1203	Speed/Torque/ Position control
--------	----------------	--------	----------------------------	------------------------------	-----------------------------------

When the power of the servo drive is turned on, this sets the menu to display on the display window. The first and second space indicates the upper menu number of each menu, and third and fourth space indicates the lower menu number. For example, if it is set as StE-01 = 1203, the “12” means the StE menu and “03 refers to the StE-03.

3. Parameter setting

P01-16*	Serial Select	Unit -	Display range 0 ~ 2	Manufactured default 0	Speed/Torque/ Position control
----------------	---------------	-----------	------------------------	------------------------------	-----------------------------------

You can use the analog speed, torque and pulse input using the serial communication and communication card(Ether Net). Refer to the following.

Set value	Content
0	Analog speed, torque and pulse command through CN1
1	Speed, torque and position data command by serial communication.
2	Speed, torque and position data command by communication card.

P01-17*	Serial I/O	Unit -	Display range 0 ~ 2	Manufactured default 0	Speed/Torque/ Position control
----------------	------------	-----------	------------------------	------------------------------	-----------------------------------

Set this when using the I/O contact point by communication.

Set value	Content
0	I/O contact point use through CN1
1	I/O contact point use by communications (RS232C/RS485)
2	I/O contact point use by communications card (Ether Net)

3. Parameter setting

HIDEN^s

P01-18*	Serial ID	Unit -	Display range 1 ~ 31	Manufactured default 1	Speed/Torque/ Position control
P01-19	Parameter Lock	Unit -	Display range ON/OFF	Manufactured default OFF	Speed/Torque/ Position control

P01-20*	Absolute Origin	Unit -	Display range ON/OFF	Manufactured default OFF	Speed/Torque/ Position control
---------	-----------------	-----------	-------------------------	--------------------------------	-----------------------------------

* When applying the 2048 or 17 bit absolute encoder, you can execute the encoder origin point. If you enter “ON” for the parameter, it will change to “OFF” and reset the Multi-turn data.

3.3 General control parameter setting

P02-01*	Control Mode	Unit -	Display range 0 ~ 5	Manufactured default 1	Speed/Torque/ Position control
---------	--------------	-----------	------------------------	------------------------------	-----------------------------------

The conversion of control mode cannot be changed when SERVO ON states.

Set value	Type contact point condition	Applied control mode
0	-	Torque control mode
1	-	Speed control mode
2	-	Position control mode
3	ON	Speed control mode
	OFF	Torque control mode
4	ON	Speed control mode
	OFF	Position control mode
5	ON	Position control mode
	OFF	Torque control mode

P02-02	Mode Change Time	Unit ms	Display range 100.0 ~ 10000.0	Manufactured default 500.0	Speed/Torque/ Position control
--------	------------------	------------	----------------------------------	----------------------------------	-----------------------------------

When the servo drive is set to multiple control mode, decelerate the servo motor during the set control mode conversion time for the conversion contact point input of the control mode to convert to control mode when the speed is zero.

3. Parameter setting

HIDEN^s

P02-03	CCW TRQ LMT	Unit %	Display range 0.0 ~ 300.0	Manufactured default 300.0	Speed/Torque/Position control
P02-04	CW TRQ LMT	Unit %	Display range -300.0 ~ 0.0	Manufactured default -300.0	Speed/Torque/Position control

P02-05	CCW Speed Limit	Unit rpm	Display range 0.0 ~ 6000.0	Manufactured default Maximum value of applied motor	Speed/Torque/Position control
P02-06	CW Speed Limit	Unit rpm	Display range -6000.0 ~ 0.0	Manufactured default -Maximum value of applied motor	Speed/Torque/Position control
P02-07	Brake Speed	Unit rpm	Display range 0.0 ~ 9999.9	Manufactured default 50.0	Speed/Torque/Position control
P02-08	Brake Time	Unit ms	Display range 0.0 ~ 10000.0	Manufactured default 50.0	Speed/Torque/Position control

♥ Operating conditions brake (P02-07, P02-08)

- 1) In case of SERVO OFF by ALARM occurrence.
- 2) In case that SERVO OFF that do not use STOP contact point of CN1 connector.

Which of the operating speed (P02-07) and operating time (P02-08) of the user menu is satisfied, the brake will operate.

(NOTE) Brake action that use STOP in SERVO ON state refers P02-30 of user menu.

P02-09	DB Mode	Unit -	Display range 0 ~ 3	Manufactured default 2	Speed/Torque/Position control
---------------	---------	--------	---------------------	------------------------	-------------------------------

DB mode control is to stop the servo motor abruptly during an emergency stop. The user menu P02-09 sets the stop operation of the servo motor when the servo is turned off or during an emergency stop. (Caution !) However, this function is not available in Large type drive.

Set value	Operation explanation
0	Maintain by decelerating the dynamic brake when the servo is off.
1	Free-run operation at set zero speed (P03-14) decelerating the dynamic brake when the servo is off.
2	Maintain free-run operation by decelerating in free-run condition when the servo is off
3	Maintain dynamic brake at set zero speed (P03-14) decelerating in free-run condition when the servo is off

3. Parameter setting

HIDEN^s

P02-10	Notch Filter 1	Unit -	Display range 0 ~ 2	Manufactured default 0	Speed/Torque/ Position control
---------------	----------------	-----------	------------------------	------------------------------	-----------------------------------

The operation of the notch filter is set to operate the notch filter to reduce the resonance of the machinery.

Set value	Operation explanation
0	Do not use the notch filter 1.
1	Operate the notch filter 1 in the set resonance frequency and resonance bandwidth.
2	This is the method of reducing the resonance after automatically detecting the resonance frequency, it automatically detects the frequency of which the vibration is generated and reduces the resonance (Automatically switches from mode 2 → 1).

P02-11	NF Frequency 1	Unit Hz	Display range 50.0 ~ 2000.0	Manufactured default 300.0	Speed/Torque/ Position control
---------------	----------------	------------	--------------------------------	----------------------------------	-----------------------------------

This sets the notch filter frequency 1 to reduce the resonance of the machinery.

P02-12	NF Bandwidth 1	Unit %	Display range 10.0 ~ 99.9	Manufactured default 95.0	Speed/Torque/ Position control
---------------	----------------	-----------	------------------------------	---------------------------------	-----------------------------------

It shows the certain gain bandwidth where the notch filter 1 operate to reduce the resonance of machinery.

P02-13	Notch Filter2	Unit -	Display range 0 ~ 1	Manufactured default 0	Speed/Torque/ Position control
---------------	---------------	-----------	------------------------	------------------------------	-----------------------------------

Set the notch filter 2 to reduce the resonance of the machinery.

Set value	Operation explanation
0	Do not use the notch filter 2.
1	Operate the notch filter 2 in the set resonance frequency and resonance bandwidth.

P02-14	NF Frequency 2	Unit Hz	Display range 50.0 ~ 2000.0	Manufactured default 500.0	Speed/Torque/ Position control
---------------	----------------	------------	--------------------------------	----------------------------------	-----------------------------------

This sets the notch filter frequency 2 to reduce the resonance of the machinery.

3. Parameter setting

HIDEN®

P02-15	NF Bandwidth 2	Unit %	Display range 10.0 ~ 99.9	Manufactured default 95.0	Speed/Torque/ Position control

3. Parameter setting

HIDEN^s

P02-19	Inertia Ratio	Unit -	Display range 1.0 ~ 50.0	Manufactured default 2.0	Speed/Torque/ Position control
---------------	---------------	--------	-----------------------------	-----------------------------	-----------------------------------

P02-20	Gain ADJ Speed 1	Unit rpm	Display range 100.0 ~ 5000.0	Manufactured default 800.0	Speed/Torque/ Position control
P02-21	Gain ADJ Speed 2	Unit rpm	Display range 10.0 ~ 500.0	Manufactured default 100.0	Speed/Torque/ Position control

When executing the control gain conversion by operation speed of the servo motor, it decides the speed converted by the control gain.

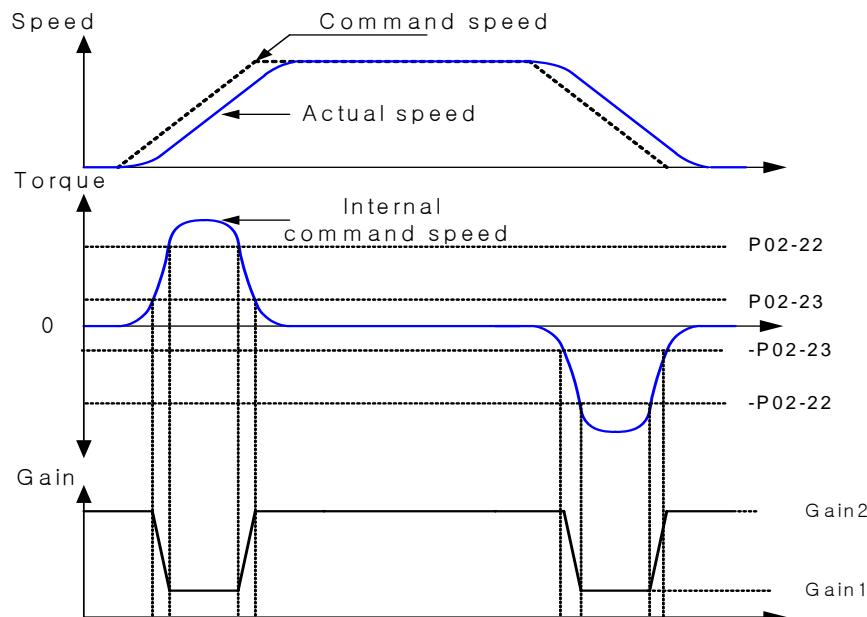

P02-22	Gain ADJ TRQ 1	Unit %	Display range 50.0 ~ 300.0	Manufactured default 150.0	Speed/Torque/ Position control
P02-23	Gain ADJ TRQ 2	Unit %	Display range 0.0 ~ 300.0	Manufactured default 50.0	Speed/Torque/ Position control

When executing the control gain conversion by operating torque of the servo motor, it decides the torque converted by the control gain.

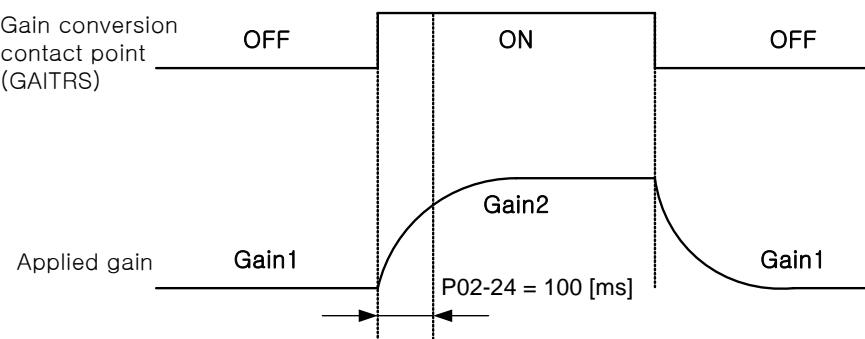

3. Parameter setting

HIDEN^s

P02-24	Contact Gain TC	Unit ms	Display range 0.0 ~ 10000.0	Manufactured default 100.0	Speed/Torque/Position control
---------------	-----------------	---------	-----------------------------	----------------------------	-------------------------------

When executing the control gain conversion by the external input contact point, it decides the control gain conversion time.

P02-25	Temporary Stop	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/Position control
---------------	----------------	--------	------------------------	--------------------------	-------------------------------

As the stop function, it sets the operation type of the set input contact point. Depending on the menu value, the stop operation is converted.

3. Parameter setting

HIDEN^s

P02-26	Emergency Stop	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	----------------	-----------	---------------------------	--------------------------------	-----------------------------------

As the emergency stop, it sets the operation of the set input contact point. Depending on the menu value, the emergency stop operation is converted.

P02-27	Direction Select	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	------------------	-----------	---------------------------	--------------------------------	-----------------------------------

As the direction function, it sets the operation of the set input contact point. Depending on the menu value, the direction select is converted.

P02-28	Ripple COMPEN	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	---------------	-----------	---------------------------	--------------------------------	-----------------------------------

In case of speed ripple during operation, this function can reduce the speed ripple. You can select from the following set values.

ON	Use speed ripple compensation function
OFF	Do not use speed ripple compensation function

P02-29*	Parameter INIT	Unit -	Display range ON/OFF	Manufactured default OFF	Speed/Torque/ Position control
----------------	----------------	-----------	-------------------------	--------------------------------	-----------------------------------

P02-30	Servo OFF Delay time	Unit ms	Display range 0.0 ~ 1000.0	Manufactured default 10.0	Speed/Torque/ Position control
---------------	----------------------	------------	-------------------------------	---------------------------------	-----------------------------------

When using the servo motor to control a vertical movement machine, the structure movable part may be moved toward the downward depending on brake timing due to the gravity or external force. By using this parameter to delay turning the servo off that movement can be protect.

P02-31	CW Limit	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	----------	-----------	---------------------------	--------------------------------	-----------------------------------

As the CW Limit function, it sets the operation type of the set input contact point. Depending on the menu value, the CW Limit operation is converted.

3. Parameter setting

HIDEN^s

P02-32	CCW Limit	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	-----------	--------	---------------------------	--------------------------------	-----------------------------------

As the CCW Limit function, it sets the operation type of the set input contact point. Depending on the menu value, the CCW Limit operation is converted.

P02-33	Servo ON/OFF	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	--------------	--------	---------------------------	--------------------------------	-----------------------------------

As the Servo ON/OFF function, it sets the operation type of the set input contact point. Depending on the menu value, the Servo ON/OFF operation is converted.

(note) After this parameter alteration selects motor ID (P01-01), drive ID (P01-11), Encoder ID (P01-12), use. If execute SERVO ON when parameter does not conform, there is damage danger servo motor and drive.

3.4 Speed control parameter setting

P03-01*	Speed Gain Mode	Unit -	Display range 1 ~ 5	Manufactured default 1	Speed control
----------------	-----------------	--------	------------------------	------------------------------	---------------

When the servo drive is set to speed control mode, it sets the speed control gain mode.

Set value	Operation explanation
1	Use speed controller gain 1 (P03-05, P03-06).
2	Use speed controller gain 2 (P03-07, P03-08).
3	Apply variable gain using gain 1 (P03-05, P03-06) and gain 2 (P03-07, P03-08) according to set speed (P02-20, P02-21) for the speed controller gain.
4	Apply variable gain using gain 1 (P03-05, P03-06) and gain 2 (P03-07, P03-08) according to set torque (P02-22, P02-23) for the speed controller gain.
5	Select gain 1 (P03-05, P03-06) or gain 2 (P03-07, P03-08) by the external contact point signal for the speed controller gain.

P03-02	PI-IP Control %	Unit %	Display range 0.0 ~ 100.0	Manufactured default 100.0	Speed/position control
P03-03	Friction COMPEN	Unit %	Display range 0.0 ~ 100.0	Manufactured default 0.0	Speed/position control

When the servo motor is attached on the machinery with severe friction with ball screw etc., this sets the friction compensation coefficient to reduce the dead zone that occurs during conversion of turning direction.

3. Parameter setting

HIDEN^s

P03-04	Load COMPEN	Unit %	Display range 0.0 ~ 100.0	Manufactured default 0.0	Speed/position control
---------------	-------------	--------	------------------------------	-----------------------------	------------------------

This sets the external load compensation coefficient to improve the response of the servo motor for the sudden load change.

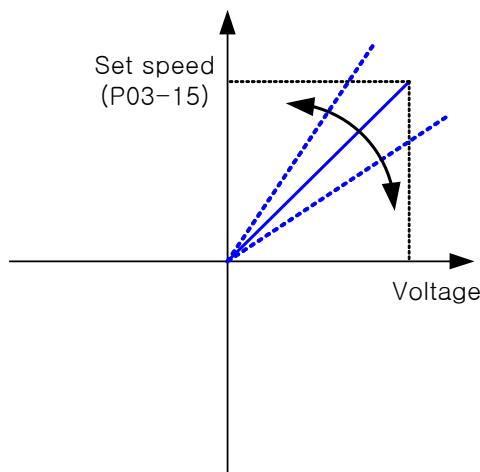

P03-05	SC Loop Gain 1	Unit Hz	Display range 0.0 ~ 1000.0	Manufactured default By capacity	Speed/position control
P03-06	SC TC 1	Unit ms	Display range 0.0 ~ 10000.0	Manufactured default By capacity	Speed/position control
P03-07	SC Loop Gain 2	Unit Hz	Display range 0.0 ~ 1000.0	Manufactured default By capacity	Speed/position control
P03-08	SC TC 2	Unit ms	Display range 0.0 ~ 10000.0	Manufactured default By capacity	Speed/position control
P03-09	Analog CMD TC	Unit ms	Display range 0.0 ~ 2000.0	Manufactured default 0.0	Speed control
P03-10	ACCEL Time	Unit ms	Display range 0.0 ~ 90000.0	Manufactured default 0.0	Speed control
P03-11	DECEL Time	Unit ms	Display range 0.0 ~ 90000.0	Manufactured default 0.0	Speed control
P03-12*	S-Mode TC	Unit ms	Display range 0.0 ~ 9000.0	Manufactured default 0.0	Speed control
P03-13	In Speed Range	Unit rpm	Display range 0.0 ~ 9999.9	Manufactured default 10.0	Speed control
P03-14	Zero Speed Range	Unit rpm	Display range 0.0 ~ 9999.9	Manufactured default 10.0	Speed control

3. Parameter setting

HIDEN^s

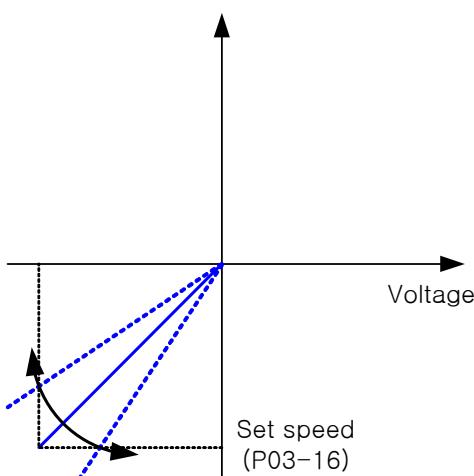

P03-15*	+ 10[V] RPM	Unit rpm	Display range 0.0 ~ 9999.9	Manufactured default Applied motor rated speed	Speed/Torque control
----------------	-------------	----------	-------------------------------	---	----------------------

This sets the command speed range of the +10[V] analog voltage when the servo drive is in speed control or torque control mode.

P03-16*	-10[V] RPM	Unit rpm	Display range -9999.9 ~ 0.0	Manufactured default -Applied motor rated speed	Speed/Torque control
----------------	------------	----------	--------------------------------	--	----------------------

This sets the command speed range of the -10[V] analog voltage when the servo drive is in speed control or torque control mode.

3. Parameter setting

HIDEN^s

P03-17	Auto Offset	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque control
---------------	-------------	--------	---------------------------	-----------------------------	----------------------

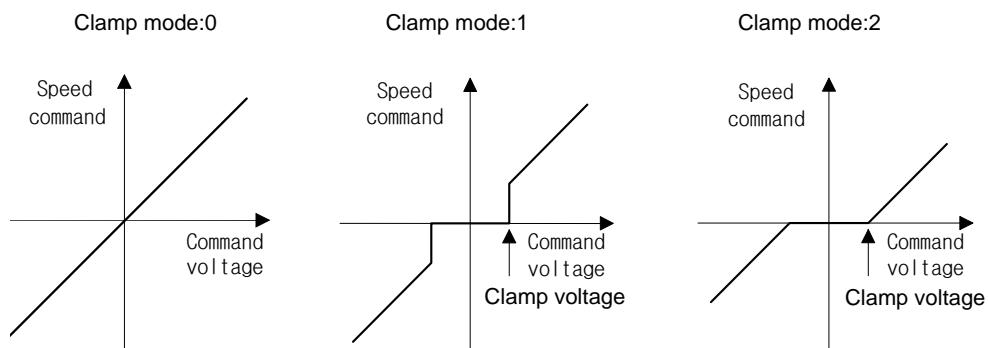

It automatically adjusts the offset voltage of the servo drive for the analog 0 [V] input of the host controller. At first, servo off and then supply the zero speed voltage to the speed input pin of CN1 connector. And then set P03-17 on and adjust the offset voltage automatically so that it can detect the connected voltage to zero speed. When the offset voltage adjustment is complete, the P03-17 is automatically turned off and the offset voltage is automatically updated to the parameter of P03-18.

P03-18	Manual Offset	Unit mV	Display range -1000.0 ~ 1000.0	Manufactured default 0.0	Speed/Torque control
P03-19*	Override ENB	Unit -	Display range ON / OFF	Manufactured default OFF	Speed control

The override mode operation is set to ON when minute speed is adjusted when the user is combining the speed command with the speed by digital contact point or analog speed command.

P03-20	Clamp Mode	Unit -	Display range 0 ~ 2	Manufactured default 0	Speed control
---------------	------------	--------	------------------------	---------------------------	---------------

Clamp mode is only applied in the speed control mode. Clamp mode can be used when stopping the servo motor without dropping the analog command voltage to 0[V]. Once it is clamped, it will return to its clamped location even when it turns by external force.

3. Parameter setting

HIDEN^s

P03-21	Clamp Voltage	Unit mV	Display range -1000.0 ~ 1000.0	Manufactured default 0.0	Speed control
P03-22*	F/Back TC	Unit ms	Display range 0.0 ~ 2000.0	Manufactured default 0.0	Speed control
P03-23	Zero SPD VIB REJ	Unit rpm	Display range 0.0 ~ 1000.0	Manufactured default 0.1	Speed/position control
P03-24*	Feedforward TRQ	Unit -	Display range 0 ~ 2	Manufactured default 0	Speed/position control

When torque command operation mode is set to “2”, the feedforward TRQ can be used. The feedforward TRQ input enables fast decision making during speed control. But if the feed forward input is too high, it can cause an overshoot or undershoot. Apply appropriately.

Set value	Operation explanation
0	The function by analog torque command is operated by input contact point (SPDLIM/TLIM).
1	The analog torque command continually operates in torque limit value irrelevant from the contact point input.
2	The analog torque command operates as feedforward torque item. (Precision control)

3.5 Input contact point digital speed and torque setting

P04-01	Speed 1 Digital input speed 1	Unit rpm	Setting range -9999.9 ~ 9999.9	Manufactured default 10.0	Speed/Torque control
P04-02	Speed 2 Digital input speed 2	Unit rpm	Setting range -9999.9 ~ 9999.9	Manufactured default 100.0	Speed/Torque control
P04-03	Speed 3 Digital input speed 3	Unit rpm	Setting range -9999.9 ~ 9999.9	Manufactured default 200.0	Speed/Torque control
P04-04	Speed 4 Digital input speed 4	Unit rpm	Setting range -9999.9 ~ 9999.9	Manufactured default 500.0	Speed/Torque control
P04-05	Speed 5 Digital input speed 5	Unit rpm	Setting range -9999.9 ~ 9999.9	Manufactured default 1000.0	Speed/Torque control
P04-06	Speed 6 Digital input speed 6	Unit rpm	Setting range -9999.9 ~ 9999.9	Manufactured default 2000.0	Speed/Torque control
P04-07	Speed 7 Digital input speed 7	Unit rpm	Setting range -9999.9 ~ 9999.9	Manufactured default 3000.0	Speed/Torque control
P04-08	Torque 1 Digital input torque 1	Unit %	Setting range -300.0 ~ 300.0	Manufactured default 0.0	Torque control
P04-09	Torque 2 Digital input torque 2	Unit %	Setting range -300.0 ~ 300.0	Manufactured default 2.0	Torque control
P04-10	Torque 3 Digital input torque 3	Unit %	Setting range -300.0 ~ 300.0	Manufactured default 20.0	Torque control
P04-11	Torque 4 Digital input torque 4	Unit %	Setting range -300.0 ~ 300.0	Manufactured default 50.0	Torque control
P04-12	Torque 5 Digital input torque 5	Unit %	Setting range -300.0 ~ 300.0	Manufactured default 75.0	Torque control
P04-13	Torque 6 Digital input torque 6	Unit %	Setting range -300.0 ~ 300.0	Manufactured default 100.0	Torque control
P04-14	Torque 7 Digital input torque 7	Unit %	Setting range -300.0 ~ 300.0	Manufactured default 120.0	Torque control

3. Parameter setting

HIDEN^s

3.6 Position control parameter setting

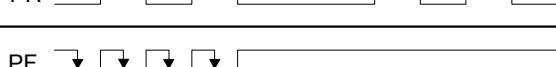

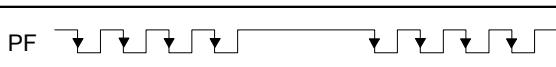

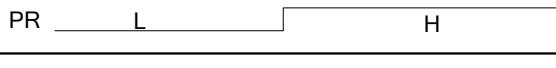

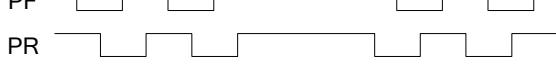

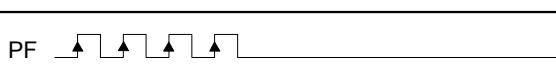

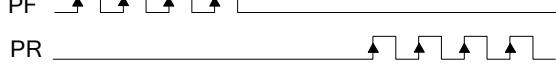

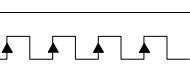

P05-01*	POS Gain Mode	Unit -	Display range 1 ~ 5	Manufactured default 1	Position control
----------------	---------------	-----------	------------------------	------------------------------	------------------

When the servo drive is set to position control mode, this parameter sets the position control gain type.

Set value	Operation explanation
1	Use the position loop gain 1. (P05-05).
2	Use the position loop gain 2. (P05-06).
3	Apply variable gain using gain 1 (P05-05) and gain 2 (P05-06) according to set speed (P02-20, P02-21) for the position controller gain.
4	Apply variable gain using gain 1 (P05-05) and gain 2 (P05-06) according to set speed (P02-22, P02-23) for the position controller gain.
5	Select gain 1 (P05-05) or gain 2 (P05-06) according to external contact point signal of the position controller gain.

P05-02*	POS Pulse Type	Unit -	Display range 0 ~ 5	Manufactured default 1	Position control
----------------	----------------	-----------	------------------------	------------------------------	------------------

Set the position command pulse mode.

[Pulse Logic]	Command pulse row mode			Remark
		In CCW direction	In CW direction	
Negative Logic	0	PF  PR 		A phase + B phase
	1	PF  PR 		CCW pulse CW pulse
	2	PF  PR 	L H	Direction + Pulse
Positive Logic	3	PF  PR 		A phase + B phase
	4	PF  PR 		CCW pulse CW pulse
	5	PF  PR 	L H	Direction + Pulse

3. Parameter setting

HIDEN^s

P05-03	Position control Speed Mode	Unit -	Display range ON / OFF	Manufactured default OFF	Position/speed control
---------------	--------------------------------	-----------	---------------------------	--------------------------------	---------------------------

If the servo drive is set to position control mode, set P05-03 on to apply the acceleration/deceleration (P03-10, P03-11) and S shape mode operation (P03-12) setted in user menu P03.

P05-04	Feedforward	Unit %	Display range 0.0 ~ 100.0	Manufactured default 0.0	Position control
P05-05	PC P Gain 1	Unit Hz	Display range 0.0 ~ 500.0	Manufactured default By capacity	Position control
P05-06	PC P Gain 2	Unit Hz	Display range 0.0 ~ 500.0	Manufactured default By capacity	Position control
P05-07	PI-P Pulse ERR	Unit pulse	Display range 0 ~ 99999	Manufactured default 0	Position control

In position control mode, when the error between command pulse and actual movement pulse exceeds the set value of P05-07, it converts to P control mode to reduce the overshoot.

P05-08	In Position	Unit pulse	Display range 0 ~ 99999	Manufactured default 100	Position control
P05-09	Follow ERR	Unit pulse	Display range 0 ~ 99999	Manufactured default 30000	Position control
P05-10	POS CMD TC	Unit ms	Display range 0.0 ~ 2000.0	Manufactured default 0.0	Position control
P05-11	FF TC	Unit ms	Display range 0.0 ~ 2000.0	Manufactured default 0.0	Position control
P05-12*	ELCTR Gear NUM 1	Unit -	Display range 1 ~ 99999	Manufactured default 1	Position control
P05-13*	ELCTR Gear DEN 1	Unit -	Display range 1 ~ 99999	Manufactured default 1	Position control
P05-14*	ELCTR Gear NUM 2	Unit -	Display range 1 ~ 99999	Manufactured default 1	Position control
P05-15*	ELCTR Gear DEN 2	Unit -	Display range 1 ~ 99999	Manufactured default 2	Position control
P05-16*	ELCTR Gear NUM 3	Unit -	Display range 1 ~ 99999	Manufactured default 1	Position control

3. Parameter setting

HIDEN®

P05-17*	ELCTR Gear DEN 3	Unit -	Display range 1 ~ 99999	Manufactured default 4	Position control
P05-18*	ELCTR Gear NUM 4	Unit -	Display range 1 ~ 99999	Manufactured default 1	Position control
P05-19*	ELCTR Gear DEN 4	Unit -	Display range 1 ~ 99999	Manufactured default 8	Position control

P05-20	Bias SPD COMPEN	Unit rpm	Display range -1000.0 ~ 1000.0	Manufactured default 0.0	Position control
---------------	-----------------	----------	-----------------------------------	-----------------------------	------------------

To reduce the position decision time in position control mode, it adds the internal compensated speed of the servo drive.

P05-21	Bias Pulse Band	Unit pulse	Display range 0 ~ 500	Manufactured default 10	Position control
---------------	-----------------	------------	--------------------------	----------------------------	------------------

The bias pulse band is the value of bias compensation speed (P05-20), when the error pulse exceeds the set value of P05-21. It adds the internal compensated speed (P05-20).

P05-22	Backlash Pulse	Unit pulse	Display range 0 ~ 99999	Manufactured default 0	Position control
---------------	----------------	------------	----------------------------	---------------------------	------------------

3.7 Torque control parameter setting

P06-01*	Analog TRQ TC	Unit ms	Display range 0.0 ~ 2000.0	Manufactured default 0.0	Torque control
----------------	---------------	---------	-------------------------------	-----------------------------	----------------

When the host controller commands the torque of the servo drive in analog voltage, this sets the low band pass filter TC of the analog torque command.

P06-02	TRQ ACCEL Time	Unit ms	Display range 0.0 ~ 9000.0	Manufactured default 0.0	Torque control
P06-03	TRQ DECEL Time	Unit ms	Display range 0.0 ~ 9000.0	Manufactured default 0.0	Torque control

User sets the acceleration/deceleration time of the torque command in the torque control mode of the servo drive.

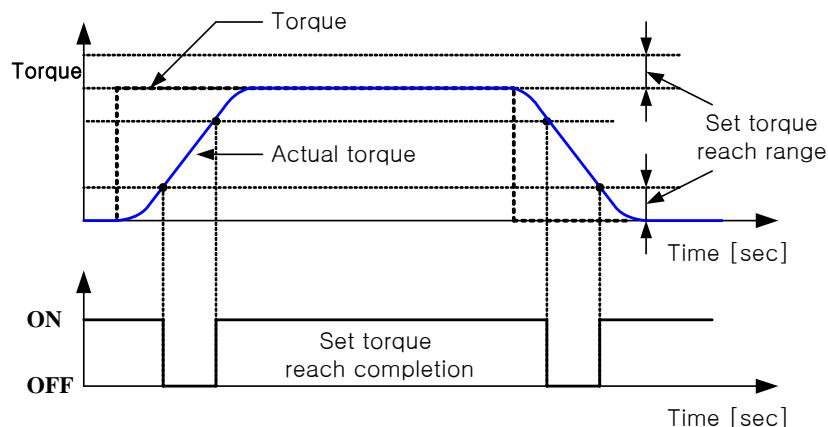

3. Parameter setting

HIDEN^s

P06-04*	TRQ S-Mode	Unit ms	Display range 0.0 ~ 2000.0	Manufactured default 0.0	Torque control
----------------	------------	---------	----------------------------	--------------------------	----------------

If you adjust the S-mode operation time constant under the condition of satisfying the operation characteristics of the machine system, you can reduce the vibration and impact of the machinery.

P06-05	In TRQ Range	Unit %	Display range 0.0 ~ 100.0	Manufactured default 10.0	Torque control
---------------	--------------	--------	---------------------------	---------------------------	----------------

P06-06	Stop TRQ Range	Unit %	Display range 0.0 ~ 100.0	Manufactured default 10.0	Torque control
P06-07	10[V] TRQ	Unit %	Display range 0 .0~ 300.0	Manufactured default 100.0	Speed/Torque control

This sets the command torque range applicable to the 10 [V] analog voltage in speed or torque control mode of the servo drive.

P06-08	Auto Offset	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque control
---------------	-------------	--------	------------------------	--------------------------	----------------------

It automatically adjusts the offset voltage of the servo drive for analog 0[V] input of the host controller.

P06-09	Manual Offset	Unit mV	Setting range -1000.0 ~ 1000.0	Manufactured default 0.0	Speed/Torque control
---------------	---------------	---------	--------------------------------	--------------------------	----------------------

3.8 Input contact point function setting

P07-01*	CN1_18 Digital INPUT 1	Unit -	Setting range 0 ~ 30	Manufactured default 1	Speed/Torque/ Position control
----------------	---------------------------	-----------	-------------------------	------------------------------	-----------------------------------

In P07-01 menu, you can set the individual pin function (0~20) and set the pin (25~30) by control mode. But in P07-02~P07-12 menu, you can only set the individual pin function setting (0~20). To set the pin by control mode, enter the value of "25~30" in the P07-01 menu so that the menu of P07-01 ~ P07-12 is automatically reset with the applicable mode pin setting. For more details, please refer to the "[CN function table]" in the next page.

* After "25 ~ 30" input to P07-01 menu, P07-01 menu changes as "1" after 1 ~ 2 second.

P07-02*	CN1_43 Digital INPUT 2	Unit -	Setting range 0 ~ 20	Manufactured default 9	Speed/Torque/ Position control
P07-03*	CN1_17 Digital INPUT 3	Unit -	Setting range 0 ~ 20	Manufactured default 10	Speed/Torque/ Position control
P07-04*	CN1_42 Digital INPUT 4	Unit -	Setting range 0 ~ 20	Manufactured default 11	Speed/Torque/ Position control
P07-05*	CN1_16 Digital INPUT 5	Unit -	Setting range 0 ~ 20	Manufactured default 3	Speed/Torque/ Position control
P07-06*	CN1_41 Digital INPUT 6	Unit -	Setting range 0 ~ 20	Manufactured default 4	Speed/Torque/ Position control
P07-07*	CN1_15 Digital INPUT 7	Unit -	Setting range 0 ~ 20	Manufactured default 13	Speed/Torque/ Position control
P07-08*	CN1_40 Digital INPUT 8	Unit -	Setting range 0 ~ 20	Manufactured default 14	Speed/Torque/ Position control
P07-09*	CN1_14 Digital INPUT 9	Unit -	Setting range 0 ~ 20	Manufactured default 12	Speed/Torque/ Position control
P07-10*	CN1_39 Digital INPUT 10	Unit -	Setting range 0 ~ 20	Manufactured default 16	Speed/Torque/ Position control
P07-11*	CN1_13 Digital INPUT 11	Unit -	Setting range 0 ~ 20	Manufactured default 15	Speed/Torque/ Position control
P07-12*	CN1_38 Digital INPUT 12	Unit -	Setting range 0 ~ 20	Manufactured default 19	Speed/Torque/ Position control

This sets the input contact point function to control the operation of the servo drive from the host controller. When you set the function applicable for each input contact point, the servo drive executes the set functions. Connect to the pin allocated as the input contact point of the CN1 connector and you can set and use the desired function from the menu. You can arrange the input contact point in multiple arrangements so that other pins can have the same function.

3.9 Output contact point function setting

P08-01*	CN1_23 Digital OUTPUT 1	Unit -	Display range 0 ~ 30	Manufactured default 0	Speed/Torque/ Position control
----------------	----------------------------	-----------	-------------------------	------------------------------	-----------------------------------

In the P08-01 menu, you can set the individual pin function (0~18) or set the pin (25~30) by control mode. But in P08-02~P08-10 menu, you can only set the individual pin function (0~18). Enter the “25~30” value in the P08-01 menu to use the pin setting by control mode, and the menu of P08-01 ~ P08-10 will automatically be reset with the pin setting of the applicable mode. For more details, please refer to the “[Output contact point function table]” in the next page.

P08-02*	CN1_48 Digital OUTPUT 2	Unit -	Display range 0 ~ 18	Manufactured default 3	Speed/Torque/ Position control
P08-03*	CN1_22 Digital OUTPUT 3	Unit -	Display range 0 ~ 18	Manufactured default 6	Speed/Torque/ Position control
P08-04*	CN1_47 Digital OUTPUT 4	Unit -	Display range 0 ~ 18	Manufactured default 5	Speed/Torque/ Position control
P08-05*	CN1_21 Digital OUTPUT 5	Unit -	Display range 0 ~ 18	Manufactured default 7	Speed/Torque/ Position control
P08-06*	CN1_46 Digital OUTPUT 6	Unit -	Display range 0 ~ 18	Manufactured default 9	Speed/Torque/ Position control
P08-07*	CN1_20 Digital OUTPUT 7	Unit -	Display range 0 ~ 18	Manufactured default 14	Speed/Torque/ Position control
P08-08*	CN1_45 Digital OUTPUT 8	Unit -	Display range 0 ~ 18	Manufactured default 15	Speed/Torque/ Position control
P08-09*	CN1_19 Digital OUTPUT 9	Unit -	Display range 0 ~ 18	Manufactured default 16	Speed/Torque/ Position control
P08-10*	CN1_44 Digital OUTPUT 10	Unit -	Display range 0 ~ 18	Manufactured default 17	Speed/Torque/ Position control

This sets the output contact point function to check the operation of the servo drive by the host controller. When you set the function applicable for each output contact point, the servo drive outputs the signal according to the set function. Connect to the output contact point of the CN1 connector to use the desired function set from the menu. If you duplicate the output contact point function setting, you can have the same output signal from different pins.

3.10 Analog monitor function setting

The internal speed, command speed, torque, command torque, feedback pulse and command pulse of the servo can be monitored externally through analog monitor 1 and monitor 2. The output voltage range is -5 ~ +5[V]. The following are the parameters related to the monitor use.

P09-01	Monitor 1	Unit -	Display range 0 ~ 5	Manufactured default 0	Speed/Torque/ Position control
P09-05	Monitor 2	Unit -	Display range 0 ~ 5	Manufactured default 1	Speed/Torque/ Position control

This sets the parameter to monitor the internal variable of the servo drive in analog output.

Set value	0	1	2	3	4	5
Monitoring variable	Actual speed [rpm]	Command speed [rpm]	Actual torque [%]	Command torque [%]	Feedback pulse [pulse]	Command pulse [pulse]

When the monitoring scale value is 1, the maximum speed output is +5[V] and maximum torque (3*Rated torque) is +5[V].

P09-02	Monitor ABS 1	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control
P09-06	Monitor ABS 2	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control

OFF : Output by distinguishing the sign

ON : Output in absolute value without distinguishing the sign

P09-03	Monitor Scale 1	Unit -	Display range 0.1 ~ 2000.0	Manufactured default 1.0	Speed/Torque/ Position control
P09-07	Monitor Scale 2	Unit -	Display range 0.1 ~ 2000.0	Manufactured default 1.0	Speed/Torque/ Position control

[Basic ratio]

Actual speed, command speed : Maximum speed / 5[V]

Actual torque, command torque : 3*Rated torque / 5[V]

Feedback pulse, command pulse : 20000[pulse] / 5[V]

3. Parameter setting

HIDEN^s

P09-04	Monitor Offset 1	Unit mV	Display range -1000.0 ~ 1000.0	Manufactured default 0.0	Speed/Torque/ Position control
P09-08	Monitor Offset 2	Unit mV	Display range -1000.0 ~ 1000.0	Manufactured default 0.0	Speed/Torque/ Position control

3.11 Jog operation parameter setting

JOG-01	Key Jog Mode	Unit -	Display range ON / OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	--------------	-----------	---------------------------	--------------------------------	-----------------------------------

This sets the key jog operation mode by left and right key. If you set JOG-01 to ON, it switches to the jog mode without external command to turn on the servo. At this time, press the left or right button to turn in the CCW direction or CW direction at the speed set in JOG-02.

JOG-02	Key Jog Speed	Unit rpm	Display range -9999.9 ~ 9999.9	Manufactured default 100.0	Speed/Torque/ Position control
---------------	---------------	-------------	-----------------------------------	----------------------------------	-----------------------------------

This sets the operation speed of the key jog mode.

JOG-03	Auto Jog Mode	Unit -	Display range 0 ~ 2	Manufactured default 0	Speed/Torque/ Position control
---------------	---------------	-----------	------------------------	------------------------------	-----------------------------------

This sets auto jog mode operation. Auto jog mode supports 8-step repeated pattern operation and the patterns support the No. 1 Auto jog mode that sets the revolution speed [rpm] and revolution time [sec] and No. 2 Auto jog mode that supports the revolution speed [rpm] and revolution [rev].

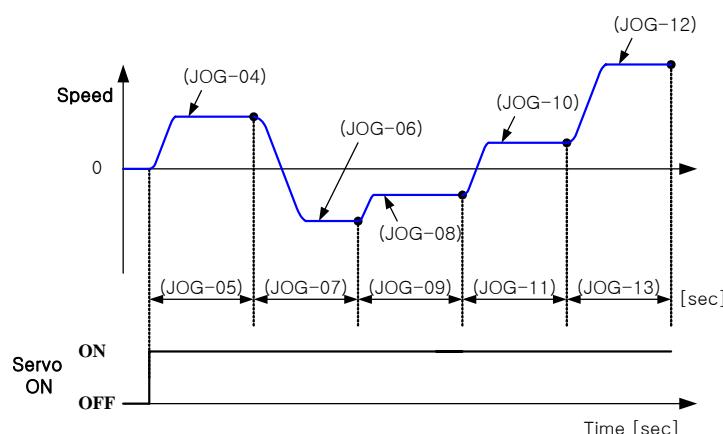

Set value	Operation explanation
0	Do not use auto jog mode
1	Revolution speed-Use revolution time auto jog mode
2	Revolution speed –Use revolution auto jog mode

JOG-04	Jog Speed 1	Unit rpm	Display range -9999.9 ~ 9999.9	Manufactured default 100.0	Speed/Torque/ Position control
JOG-05	Jog Time1/REV1	Unit [sec]/[rev]	Display range 0.00 ~ 5000.00	Manufactured default 1.00	Speed/Torque/ Position control
JOG-06	Jog Speed 2	Unit rpm	Display range -9999.9 ~ 9999.9	Manufactured default -100.0	Speed/Torque/ Position control

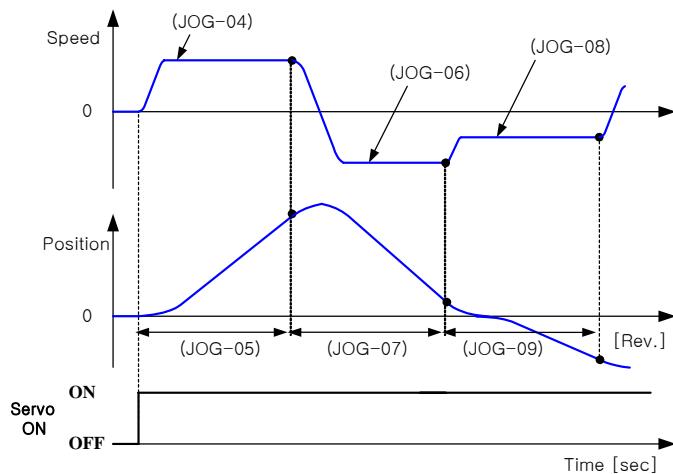

3. Parameter setting

JOG-09	Jog Time3/REV3	Unit [sec]/[rev]	Display range 0.00 ~ 5000.00	Manufactured default 1.00	Speed/Torque/ Position control
JOG-10	Jog Speed 4	Unit rpm	Display range -9999.9 ~ 9999.9	Manufactured default -200.0	Speed/Torque/ Position control
JOG-11	Jog Time4/REV4	Unit [sec]/[rev]	Display range 0.00 ~ 5000.00	Manufactured default 1.00	Speed/Torque/ Position control
JOG-12	Jog Speed 5	Unit rpm	Display range -9999.9 ~ 9999.9	Manufactured default 400.0	Speed/Torque/ Position control
JOG-13	Jog Time5/REV5	Unit [sec]/[rev]	Display range 0.00 ~ 5000.00	Manufactured default 1.00	Speed/Torque/ Position control
JOG-14	Jog Speed 6	Unit rpm	Display range -9999.9 ~ 9999.9	Manufactured default -400.0	Speed/Torque/ Position control
JOG-15	Jog Time6/REV6	Unit [sec]/[rev]	Display range 0.00 ~ 5000.00	Manufactured default 1.00	Speed/Torque/ Position control
JOG-16	Jog Speed 7	Unit rpm	Display range -9999.9 ~ 9999.9	Manufactured default 800.0	Speed/Torque/ Position control
JOG-17	Jog Time7/REV7	Unit [sec]/[rev]	Display range 0.00 ~ 5000.00	Manufactured default 1.00	Speed/Torque/ Position control
JOG-18	Jog Speed 8	Unit rpm	Display range -9999.9 ~ 9999.9	Manufactured default -800.0	Speed/Torque/ Position control
JOG-19	Jog Time8/REV8	Unit [sec]/[rev]	Display range 0.00 ~ 5000.00	Manufactured default 1.00	Speed/Torque/ Position control

[Auto jog mode 1(Speed - time)]

[Auto jog mode 2 (Speed - revolution)]

3.12 Alarm display setting

ALS-01	Current Alarm	Unit -	Display range -	Manufactured default nor	Speed/Torque/Position control
---------------	---------------	--------	-----------------	--------------------------	-------------------------------

This parameter indicates the current alarm. ALS-01 menu is not the user input parameter but the menu to notify the alarm condition of the servo drive.

Alarm number	Alarm acronym	Alarm content	A_CODE0	A_CODE1	A_CODE2	A_CODE3
-	Normal	Normal condition	0	0	0	0
00	EMER STOP	Emergency stop alarm	1	0	0	0
01	OVER CURNT	Servo over-current alarm	0	1	0	0
02	OVER VOLT	Servo over-voltage alarm	1	1	0	0
03	OVER LOAD	Overload alarm	0	0	1	0
04	POWER FAIL	Servo insufficient voltage alarm	1	0	1	0
05	LINE FAIL	Encoder missed operation alarm	0	1	1	0
06	OVER SPEED	Over-speed alarm	1	1	1	0
07	FOLLOW ERR	Location following error alarm	0	0	0	1
08	OUTPUT NC	Output NC alarm	1	0	0	1
09	PPR ERROR	Encoder pulse rate setting alarm	0	1	0	1
10	ABS DATA	Absolute encoder data error alarm	1	1	0	1
11	ABS BATT	Absolute encoder battery low alarm	0	0	1	1
12	ABS MDER	Absolute encoder multi turns data transmission error alarm	1	0	1	1
13	OUTPUT EC	Output mis-wiring alarm	0	1	1	1

3. Parameter setting

HIDEN^s

ALS-02	Alarm Reset	Unit -	Display range ON/OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	-------------	-----------	-------------------------	--------------------------------	-----------------------------------

It resets and initializes the occurred alarm. Check and remove the cause of the alarm before resetting the alarm and then reset.

This is the parameter that the occurred alarm history resets and initializes.

ALS-03 ~ ALS-12	Alarm History 1 ~ Alarm History 10	Unit -	Indicated range 0 ~ 32	Manufactured default 0	Speed/Torque/ Position control
-------------------------------------	--	-----------	---------------------------	------------------------------	-----------------------------------

This is the menu that stores and shows the alarm history. The user cannot set this arbitrarily.

ALS-13	History Reset	Unit -	Display range ON/OFF	Manufactured default OFF	Speed/Torque/ Position control
---------------	---------------	-----------	-------------------------	--------------------------------	-----------------------------------

It resets and initializes the occurred alarm history.

Chapter 4

Servo using method and Gain adjustment

Chapter 4 explains the servo using method and gain adjustment by each control mode.

4.1 Gain adjustment for speed mode	4-1
4.2 Gain adjustment for position mode	4-7
4.3 Gain adjustment for torque mode.....	4-14
4.4 Autotuning	4-17
4.5 Precaution for absolute encoder	4-20

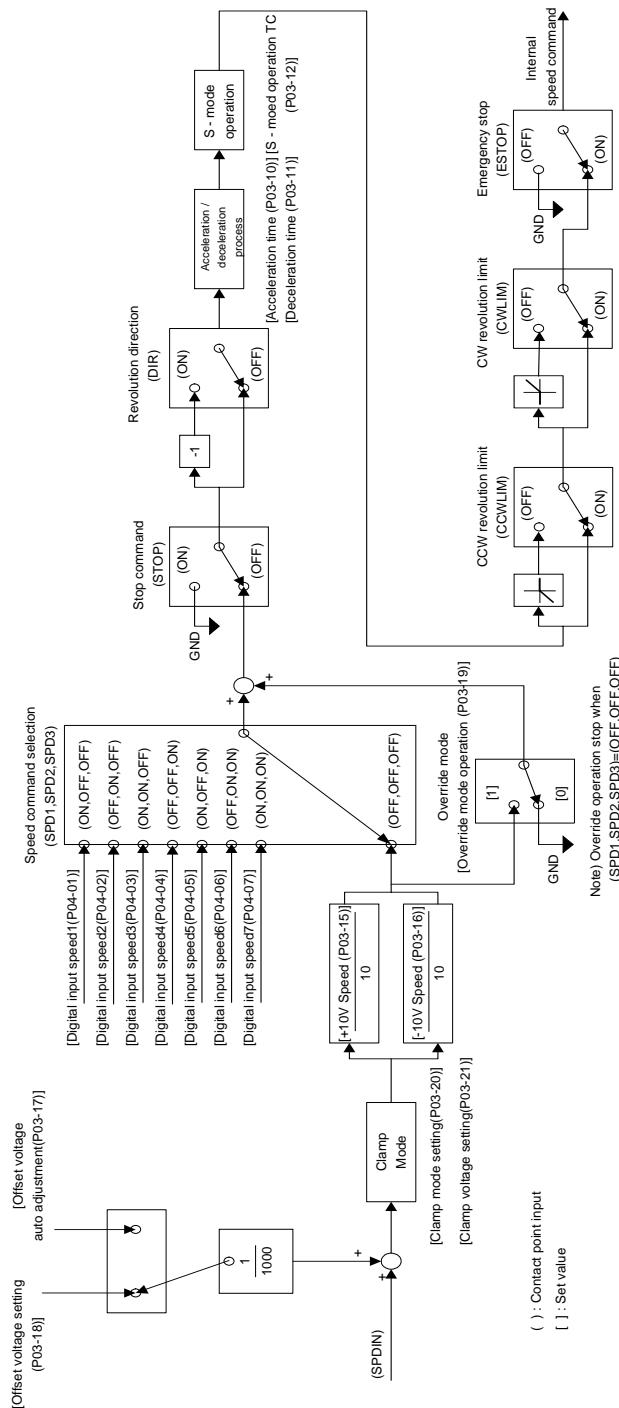

4. Servo using method and gain adjustment

HIDEN^s

4.1 Gain adjustment method for speed control mode

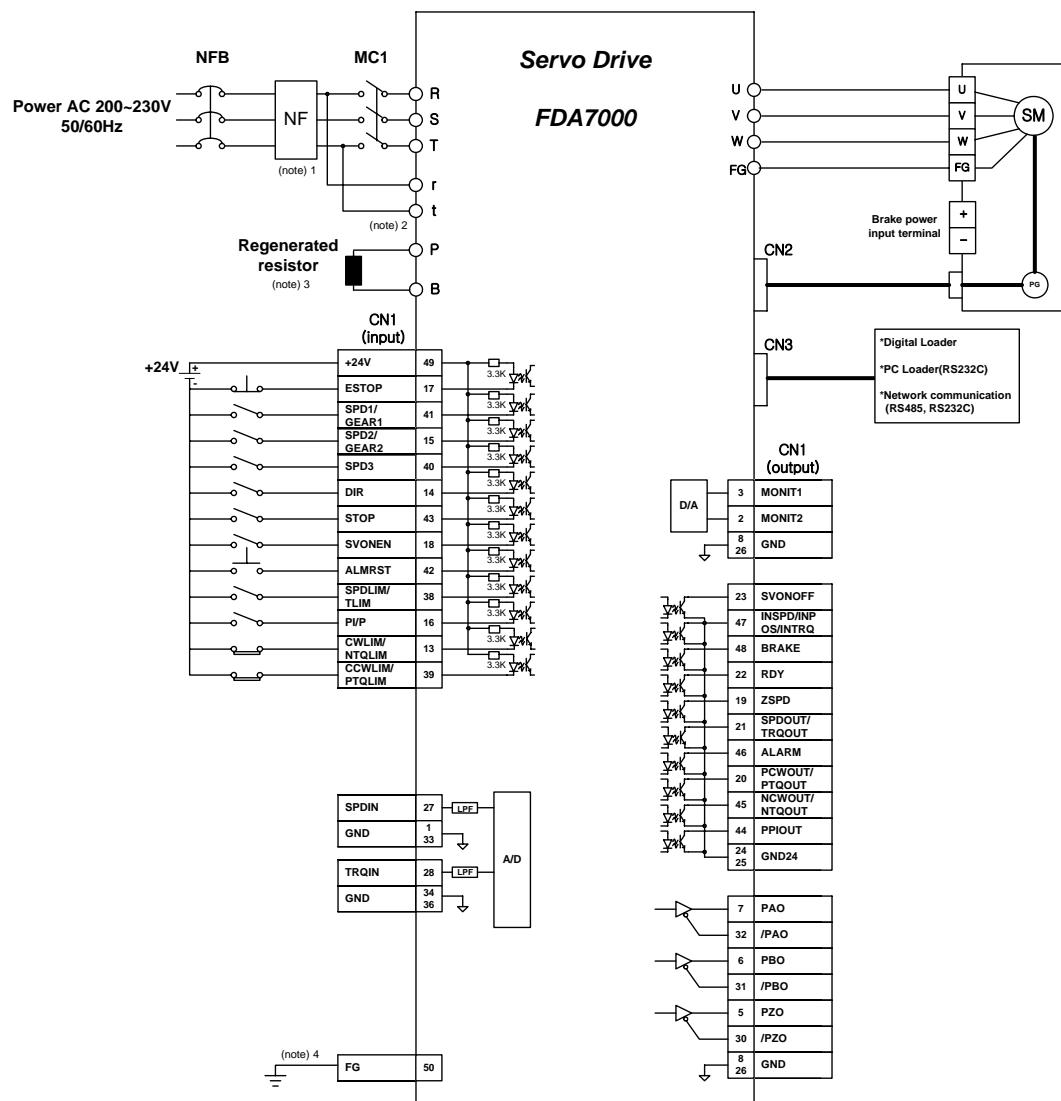

This explains the gain adjustment method when using speed servo. The following diagram shows the generation sequence of the speed command in speed control.

4. Servo using method and gain adjustment

HIDEN^s

4.1.1 CN1 wiring diagram for speed control servo

4. Servo using method and gain adjustment

HIDEN^s

4.1.2 Speed servo gain adjustment

- 1) This sets the speed control mode gain.

P03-01	Speed Gain Mode	Unit -	Setting range 1 ~ 5	Manufactured default 1	Speed control
---------------	-----------------	-----------	------------------------	---------------------------	---------------

When the servo drive set to speed control mode, this sets the speed control gain.

Set value	Operation explanation
1	Use speed controller gain 1 (P03-05, P03-06).
2	Use speed controller gain 2 (P03-07, P03-08).
3	Apply variable gain using gain 1 (P03-05, P03-06) and gain 2 (P03-07, P03-08) according to set speed (P02-20, P02-21) for the speed controller gain.
4	Apply variable gain using gain 1 (P03-05, P03-06) and gain 2 (P03-07, P03-08) according to set torque (P02-22, P02-23) for the speed controller gain.
5	Select gain 1 (P03-05, P03-06) or gain 2 (P03-07, P03-08) by the external contact point signal for the speed controller gain.

- 2) Set the SC loop gain 1 and 2 applied by the set value of P03-01.

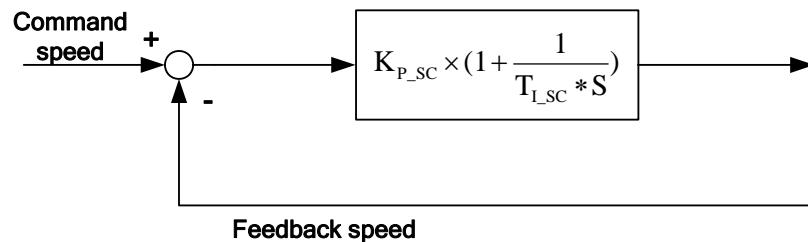

P03-05	SC Loop Gain1	Unit Hz	Display range 0.0 ~ 1000.0	Manufactured default By capacity	Speed/torque control
P03-07	SC Loop Gain2	Unit Hz	Display range 0.0 ~ 1000.0	Manufactured default By capacity	Speed/torque control

- 3) Set SC TC1 and 2 applied by the set value of P03-01.

P03-06	SC TC1	Unit ms	Display range 0.0 ~ 10000.0	Manufactured default By capacity	Speed/torque control
P03-08	SC TC2	Unit ms	Display range 0.0 ~ 10000.0	Manufactured default By capacity	Speed/torque control

4. Servo using method and gain adjustment

HIDEN^s

$$K_{P_SC} = \text{SC Loop Gain}$$

$$T_{I_SC} = \text{SC TC}$$

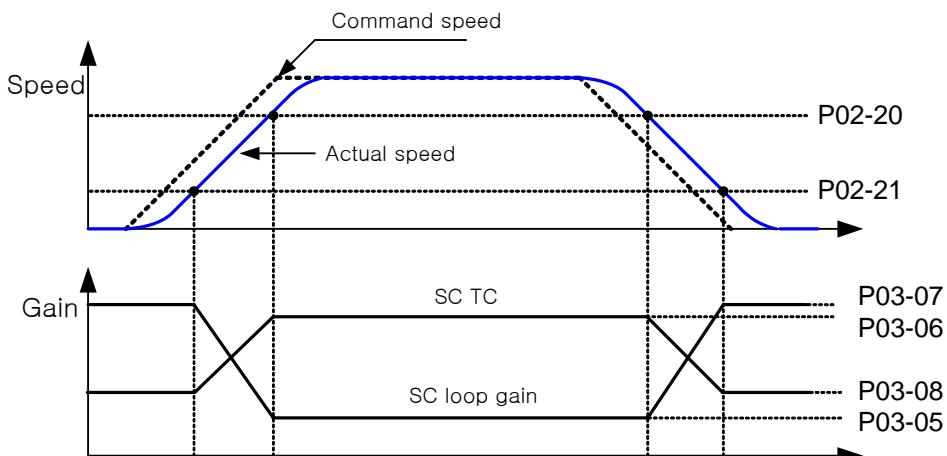

- 4) This sets the inertia ratio.

P02-19	Inertia Ratio	Unit -	Display range 1.0~50.0	Manufactured default 2.0	Speed/Torque/Position control
---------------	---------------	--------	------------------------	--------------------------	-------------------------------

$$\text{Load inertia} = \frac{\text{System inertia (Motor inertia + Load inertia)}}{\text{Motor inertia}}$$

- 5) When P03-01="3", the variable gain is applied based on the following gain adjustment speed 1 and 2.

P02-20	Gain ADJ Speed1	Unit rpm	Display range 100.0 ~ 5000.0	Manufactured default 800.0	Speed/Torque/Position control
P02-21	Gain ADJ Speed2	Unit rpm	Display range 10.0 ~ 500.0	Manufactured default 100.0	Speed/Torque/Position control

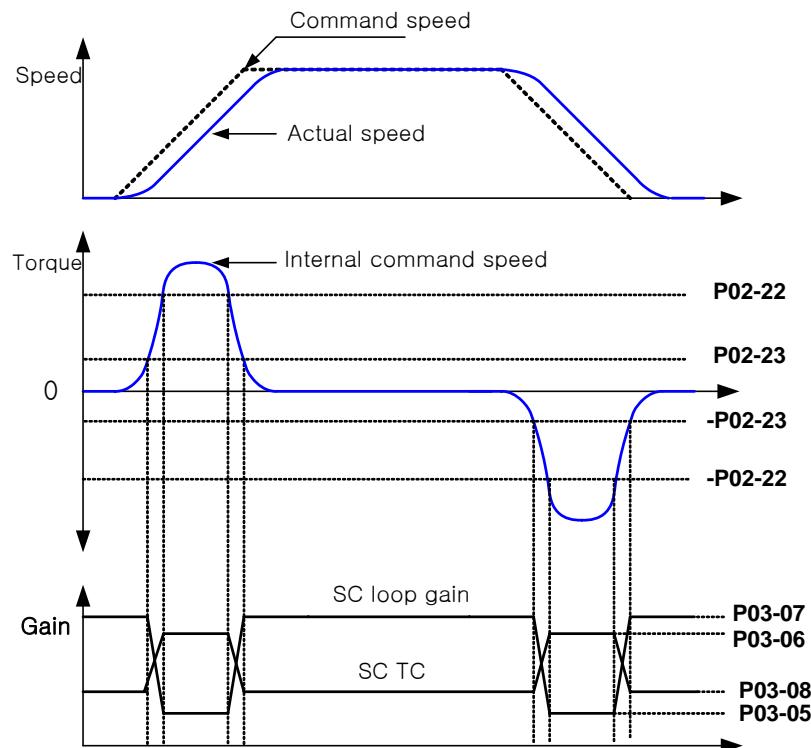

- 6) When P03-01="4", the variable gain is applied based on the following gain adjustment torque 1 and 2.

4. Servo using method and gain adjustment

HIDEN^s

P02-22	Gain ADJ TRQ1	Unit %	Display range 0.0 ~ 300.0	Manufactured default 150.0	Speed/Torque/Position control
P02-23	Gain ADJ TRQ1	Unit %	Display range 0.0 ~ 300.0	Manufactured default 50.0	Speed/Torque/Position control

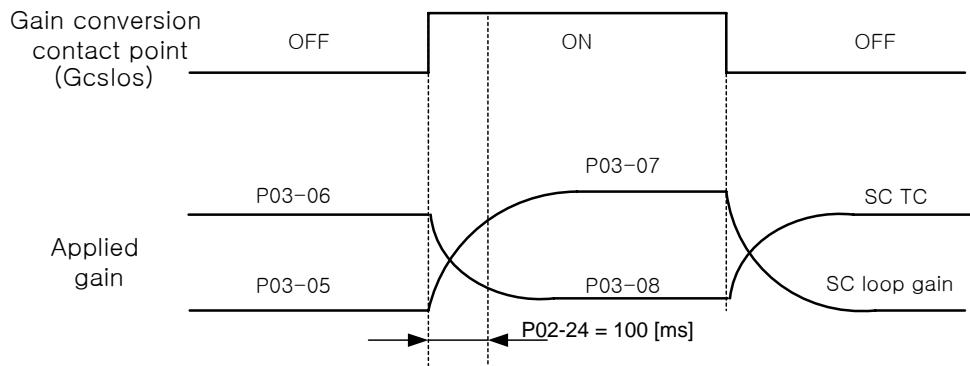

- 7) When P03-01="5", the variable gain is applied based on the ON/OFF status of external control gain conversion contact point. At this time, the conversion time of the control gain is decided.

P02-24	Contact Gain TC	Unit ms	Display range 0.0 ~ 10000.0	Manufactured default 100.0	Speed/Torque/Position control
---------------	-----------------	---------	-----------------------------	----------------------------	-------------------------------

Increasing the contact gain TC in P02-24 has an effect of smoothing conversion of control gain.

4. Servo using method and gain adjustment

HIDEN^s

8) This sets the mixture rate of the PI-IP controller.

P03-02	PI-IP Control %	Unit %	Display range 0.0 ~ 100.0	Manufactured default 100.0	Speed control
--------	-----------------	--------	------------------------------	-------------------------------	---------------

[Characteristics of individual controller]

a) **PI** speed controller

: It has excellent acceleration/deceleration and good responsiveness characteristics but can cause large overshoot.

b) **IP** speed controller

: It has lower acceleration/deceleration and responsiveness characteristics compared to the PI speed controller, but it can suppress the overshoot to reduce the vibration.

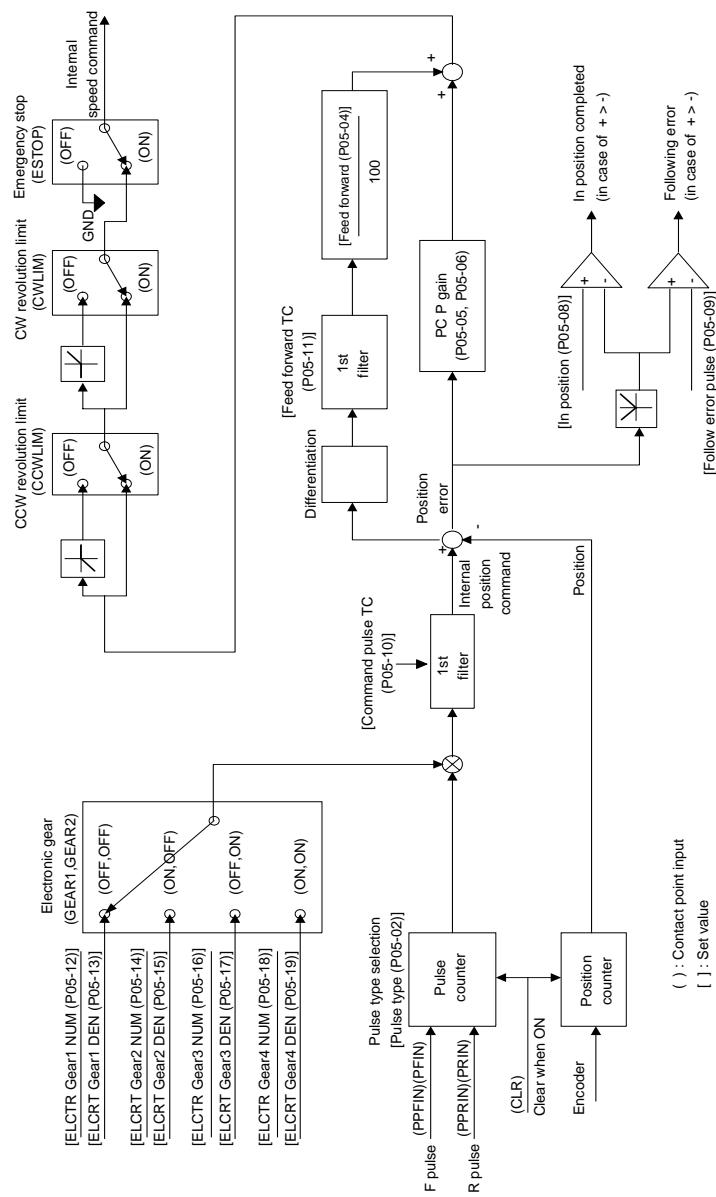

You can adjust the controller set ratio with the desired performance by considering the responsiveness and overshoot.

♥ P03-02 = 100 : Applied to **PI** speed controller

P03-02 = 0 : Applied to **IP** speed controller

4.2 Gain adjustment method for position control mode

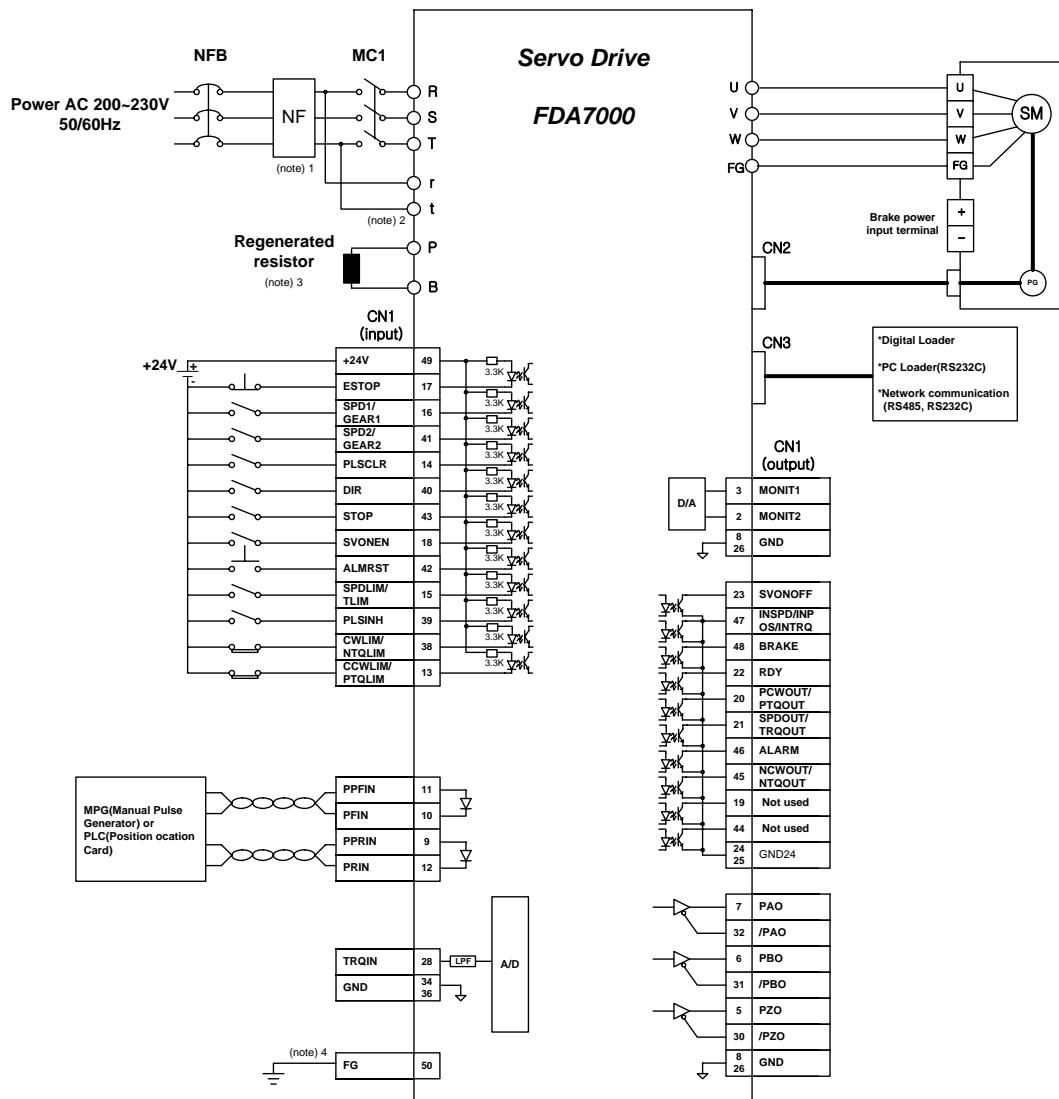

This explains the position servo control mode and gain adjustment method. The following diagram shows the generating sequence of the speed command for position control.

4. Servo using method and gain adjustment

HIDEN^s

4.2.1 CN1 wiring diagram for position control servo

♥ The above input and output contact points are shown when setting the position control mode contact point. (P07-01,P08-01=27).

(Note) 1 : NF stands for Noise Filter and it must be used to prevent the noise from intruding from the outside.

(Note) 2 : For the FDA7004/7004B~45 type, connect the single phase AC220V[V] to the r, t terminal, auxiliary power. FDA7001~02 type does not have the auxiliary power r, t terminal.

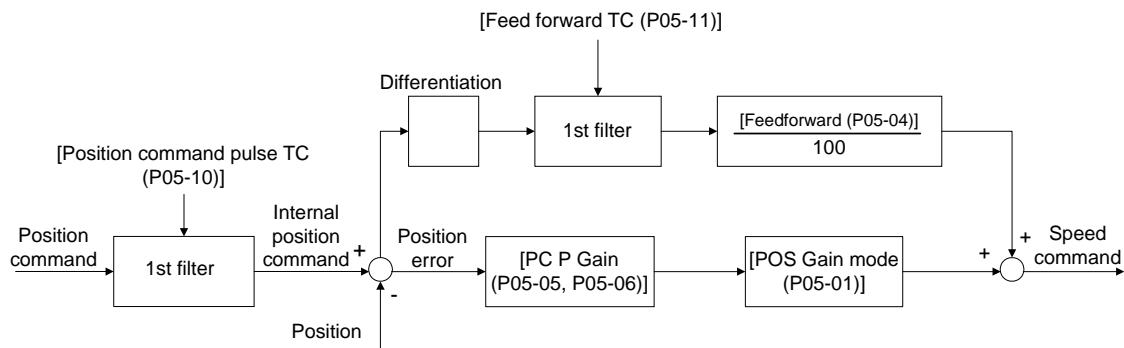

(Note) 3 : The recovery resistances of FDA7004-FDA7010 are installed inside the driver as an internal type. The recovery resistance of the FDA7001, 7002, 7004B, FDA7015 type or above is the separately installed type. Check the capacity and apply accordingly.

(Note) 4 : Connect the ground wire of CN1 cable to the FG (Frame Ground) terminal.

(Note) 5 : Separate GND24 (CN – 24, 25) and GND (CN1 – 1, 8, 26, 33, 34, 36).

When connect commonness, malfunction of servo drive and burnout can occur.

4.2.2 Position servo gain adjustment

(Note) In this control mode, Error pulse should be cleared according to the servo condition.

Before the stop function release, the error pulse is cleared by PLSCLR action.

- 1) This sets the position control gain mode.

P05-01	POS Gain Mode	Unit	Display range 1 ~ 5	Manufactured default 1	Position control
--------	---------------	------	------------------------	------------------------------	------------------

When the servo drive set to position control mode, this sets the position control gain mode.

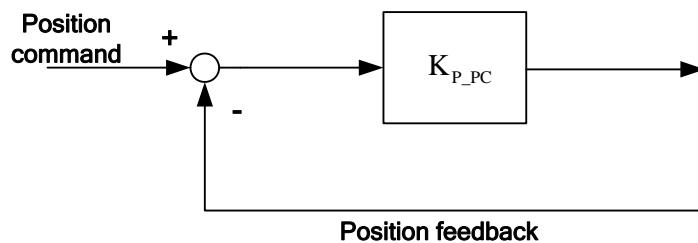

Set value	Operation explanation
1	Use PC P gain 1 (P05-05).
2	Use PC P gain 2 (P05-06).
3	Apply variable gain using gain 1 (P05-05) and gain 2 (P05-06) according to set speed (P02-20, P02-21) for the position controller gain.
4	Apply variable gain using gain 1 (P05-05) and gain 2 (P05-06) according to set torque (P02-22, P02-23) for the position controller gain.
5	Select gain 1 (P05-05) or gain 2 (P05-06) by the external contact point signal for the position controller gain.

- 2) This sets the PC P gain applied by the set value of P05-01

4. Servo using method and gain adjustment

HIDEN^s

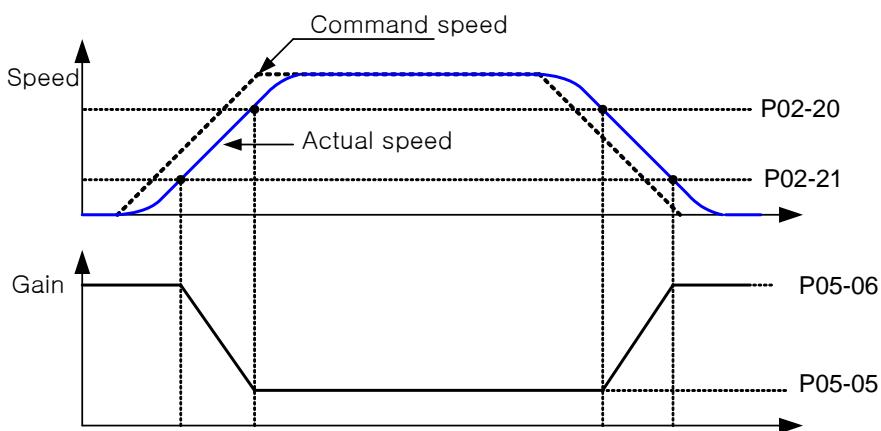

P05-05	PC P Gain1	Unit Hz	Display range 0.0 ~ 500.0	Manufactured default By capacity	Position control
P05-06	PC P Gain2	Unit Hz	Display range 0.0 ~ 500.0	Manufactured default By capacity	Position control

$$K_{P_PC} = \text{PC P Gain}$$

- 3) When P05-01="3", the variable gain is applied based on the following gain adjustment speed 1 and 2.

P02-20	Gain ADJ Speed1	Unit rpm	Display range 100.0 ~ 5000.0	Manufactured default 800.0	Speed/Torque/Position control
P02-21	Gain ADJ Speed2	Unit rpm	Display range 10.0 ~ 500.0	Manufactured default 100.0	Speed/Torque/Position control

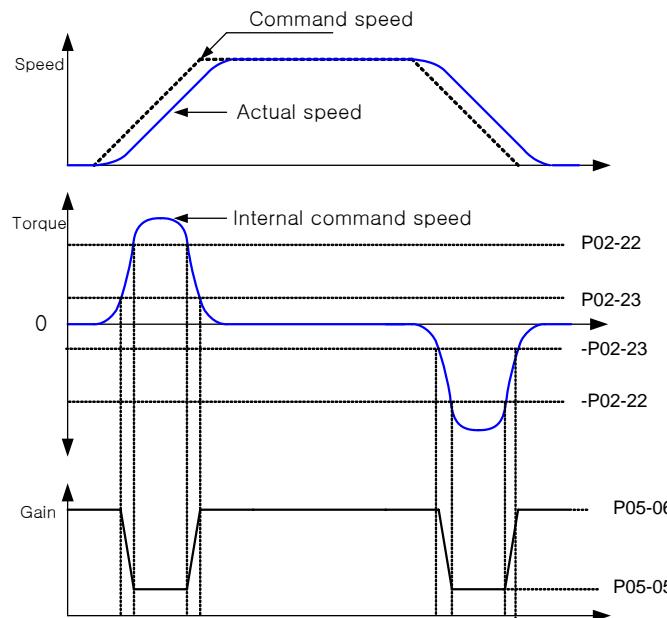

- 4) When P05-01="4", the variable gain is applied based on the following gain adjustment torque1 and 2.

4. Servo using method and gain adjustment

HIDEN^s

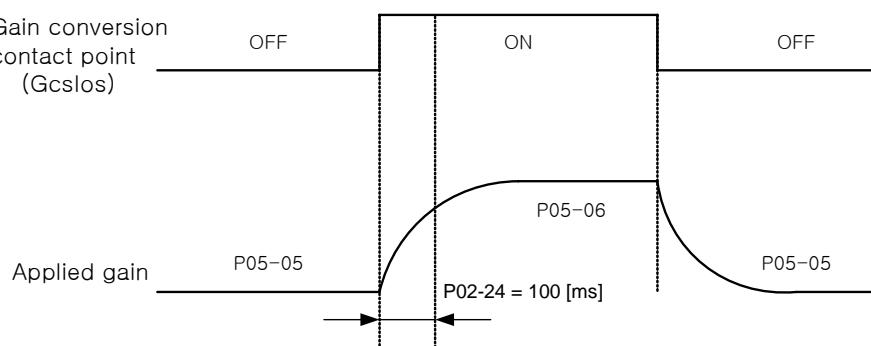

P02-22	Gain ADJ TRQ1	Unit %	Display range 0.0 ~ 300.0	Manufactured default 150.0	Speed/Torque/Position control
P02-23	Gain ADJ TRQ2	Unit %	Display range 0.0 ~ 300.0	Manufactured default 50.0	Speed/Torque/Position control

- 5) When P5-01="5", the variable gain is applied based on the ON/OFF status of the external control gain conversion contact point. At this time, the conversion time of the control gain is decided.

P02-24	Contact Gain TC	Unit ms	Display range 0.0 ~ 10000.0	Manufactured default 100.0	Speed/Torque/Position control
---------------	-----------------	---------	-----------------------------	----------------------------	-------------------------------

If you want to execute smooth gain conversion, set the Contact Gain TC to long. Enter the Contact Gain TC in (ms) unit.

4. Servo using method and gain adjustment

HIDEN^s

6) Feed forward ratio setting

P05-04	Feedforward	Unit %	Display range 0.0 ~ 100.0	Manufactured default 0.0	Position control
---------------	-------------	--------	------------------------------	-----------------------------	------------------

Enter the feedforward ratio for the position command speed in [%] unit. When this value increases it can reduce the position decision time but if set to high, it can cause an overshoot or vibration to the machine. If this value is set "0", the position controller becomes simple position loop control mode.

Refer to the Max_Value [Feedforward] according to the following R=[Speed loop gain]/[Position loop gain].

R = [Speed loop gain] / [Position loop gain]	Max_Value [Feedforward]
5	70 or below
7	80 or below
10	85 or below
20	90 or below

P05-11	FF TC	Unit ms	Setting range 0.0 ~ 2000.0	Manufactured default 0.0	Position control
---------------	-------	---------	-------------------------------	-----------------------------	------------------

Enter the 1st filter TC in [ms] unit of the feedforward input of the position command speed. The entered position command is divided and processed through the 1st filter before being used as the feedforward input, the TC of this filter can be adjusted. In the applied field where the position command changes abruptly, set this value high and in applied field where the position command changes smoothly, set this value low. If you do not want to use this filter, input "0".

[Recommended setting condition]

$$P05-11(\text{Feedforward TC}) \leq 1000 \times (\text{Max_Value[Feedforward]} - [\text{Feedforward}]) / 100 / [\text{PC P Gain}]$$

7) Position command pulse TC setting

P05-10	POS CMD TC	Unit ms	Display range 0.0 ~ 2000.0	Manufactured default 0.0	Position control
---------------	------------	---------	-------------------------------	-----------------------------	------------------

Set the filter TC on the position command pulse input for smoothing operation in the position

4. Servo using method and gain adjustment

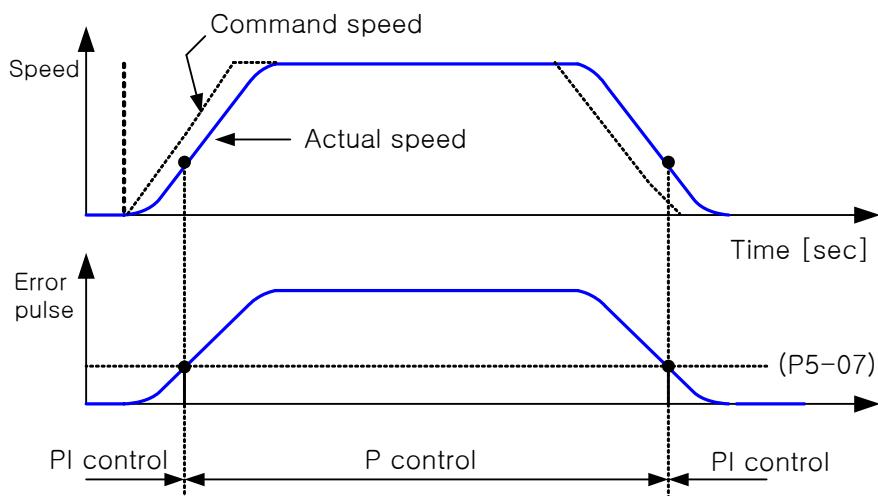

HIDEN^s

control mode. If you would like to execute smoothing operation without setting the position command filter TC, set the position decision mode setting of Position control speed mode (P05-03) to ON. It permits the acceleration/deceleration (P03-10, P03-11) and S mode operation (P03-12) set in user menu P03 of speed command. The smoothing operation is advantageous when reaching position decision in position control mode.

8) This sets the PI-P mode pulse error.

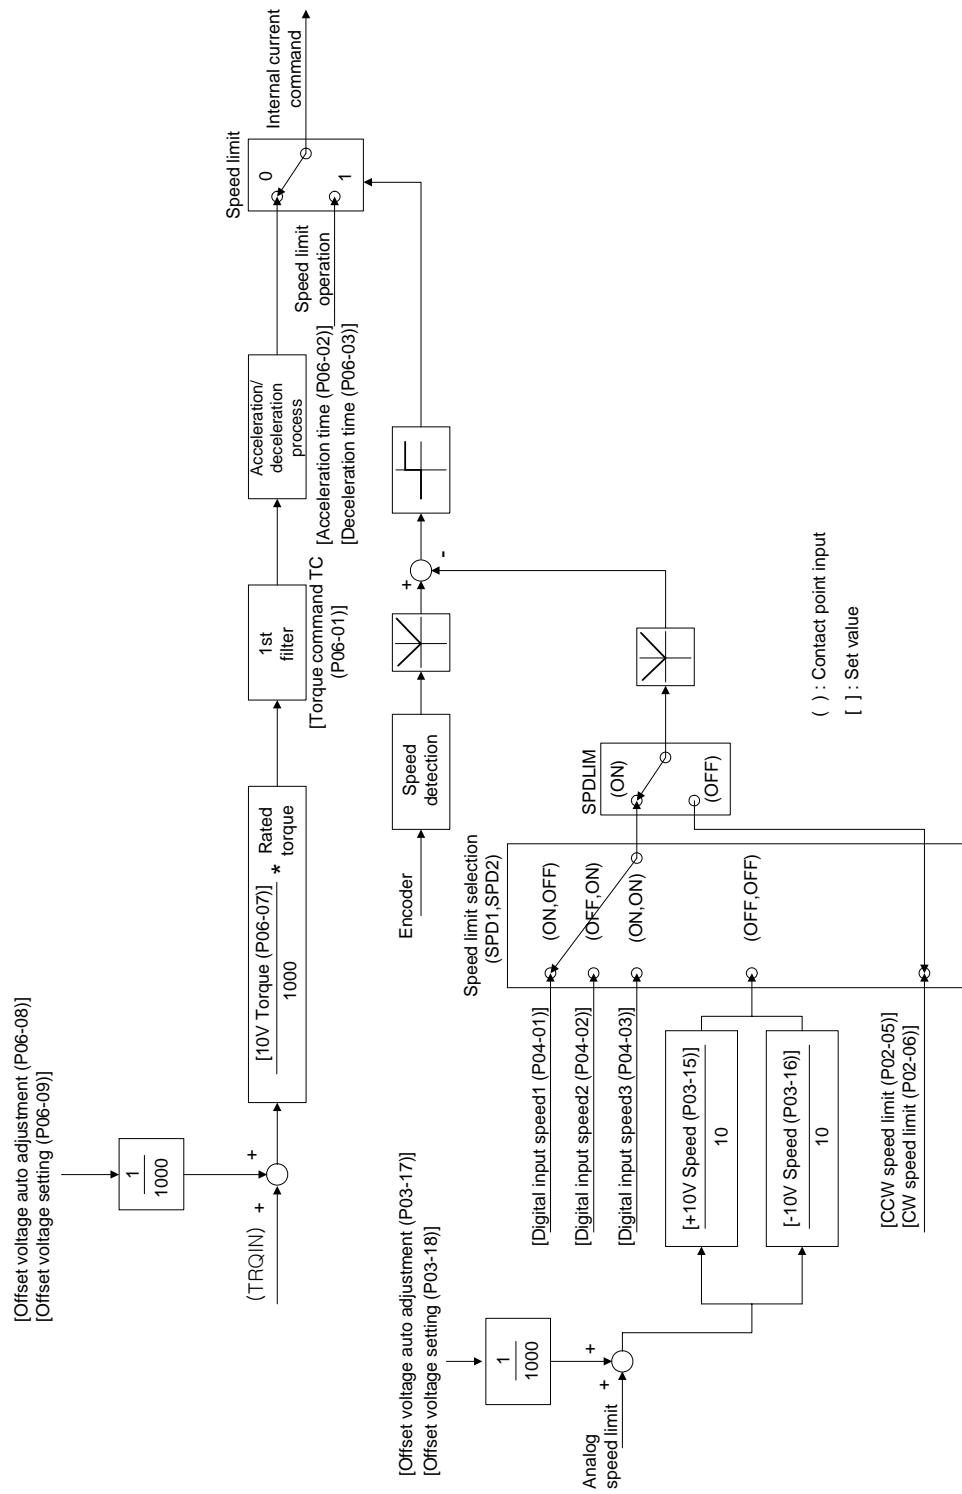

P05-07	PI-P Pulse ERR	Unit pulse	Display range 0 ~ 99999	Manufactured default 0	Position control
---------------	----------------	------------	----------------------------	---------------------------	------------------

If the error between command pulse and actual movement pulse exceeds the set value of P05-07, it switches to P control mode to suppress overshoot.

4.3 Gain adjustment method for torque control mode

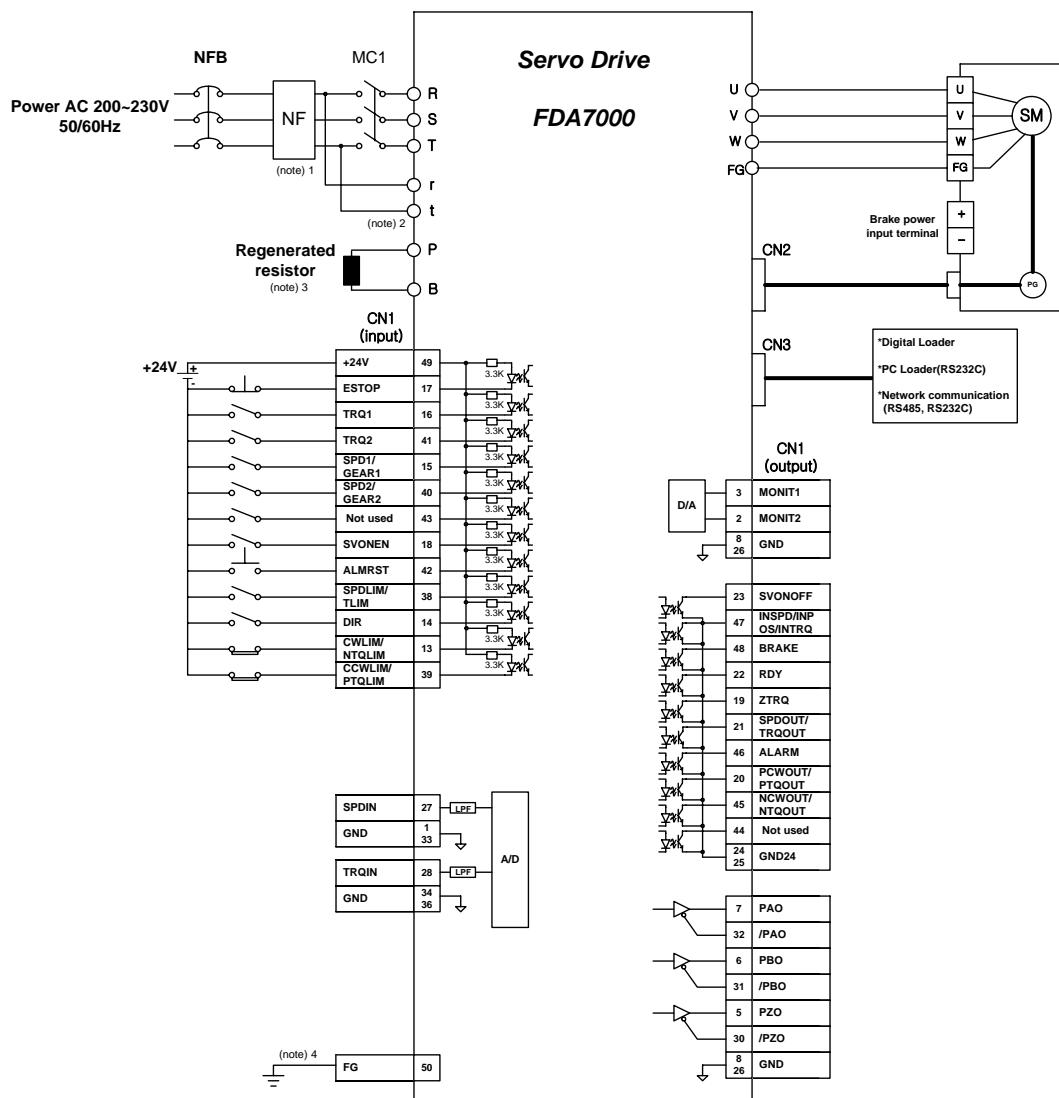

This explains the torque servo using method and gain adjustment method. The following diagram shows the generation sequence of the current command during torque control.

4. Servo using method and gain adjustment

HIDEN^s

4.3.1 CN1 wiring diagram for torque control servo

◆ The above input and output contact points are shown when setting the torque control mode contact point. (P07-01,P08-01=25).

(Note) 1 : NF stands for Noise Filter and it must be used to prevent the noise from intruding from the outside.

(Note) 2 : For the FDA7004/7004B~45 type, connect the single phase AC220V[V] to the r, t terminal, auxiliary power. FDA7001~02 type does not have the auxiliary power r, t terminal.

(Note) 3 : The recovery resistances of FDA7004-FDA7010 are installed inside the driver as an internal type. The recovery resistance of the FDA7001, 7002, 7004B, FDA7015 type or above is the separately installed type. Check the capacity and apply accordingly.

(Note) 4 : Connect the ground wire of CN1 cable to the FG (Frame Ground) terminal.

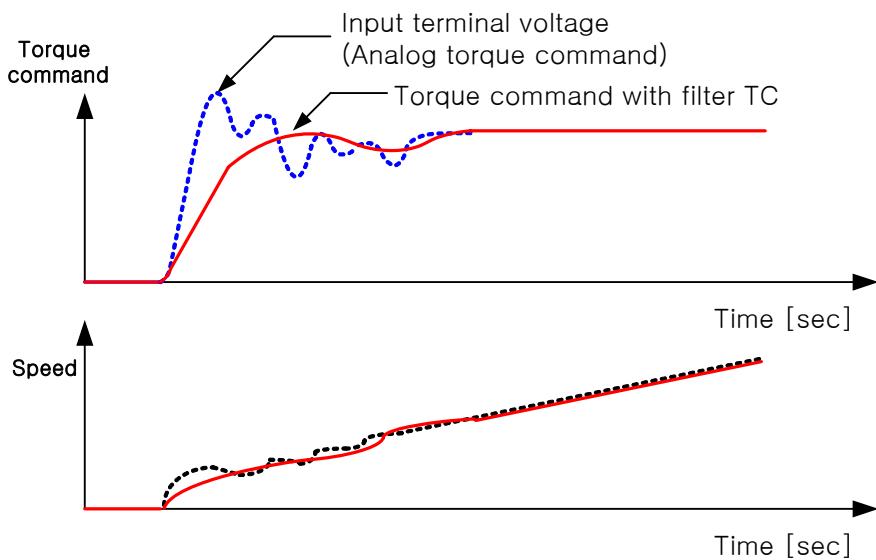

(Note) 5 : Separate GND24 (CN – 24, 25) and GND (CN1 – 1, 8, 26, 33, 34, 36).

When connect commonness, malfunction of servo drive and burnout can occur.

4.3.2 Gain adjustment of torque servo

P06-01*	Analog TRQ TC	Unit ms	Display range 0.0 ~ 2000.0	Manufactured default 0.0	Torque control
----------------	---------------	------------	-------------------------------	--------------------------------	----------------

If you suspect that machine vibration is being caused by the servo system, try to adjust the Analog TRQ TC. It can reduce the vibration. The lower the value, the better control response will be, but if set too high, it may reduce the responsiveness.

- ♥ For the speed limit of torque servo, 4 speed limit values are applied according to the contact point of SPD1 and SPD2 when the SPDLIM contact point is ON and the speed limit of P02-05 and P02-06 are applied when the SPDLIM contact point is OFF.

4.4 Autotuning

For the autotuning applied to FDA7000 series, the servo drive estimates the inertia of the load attached to the servo motor during operation and has the function of adjusting the speed control gain and position control gain.

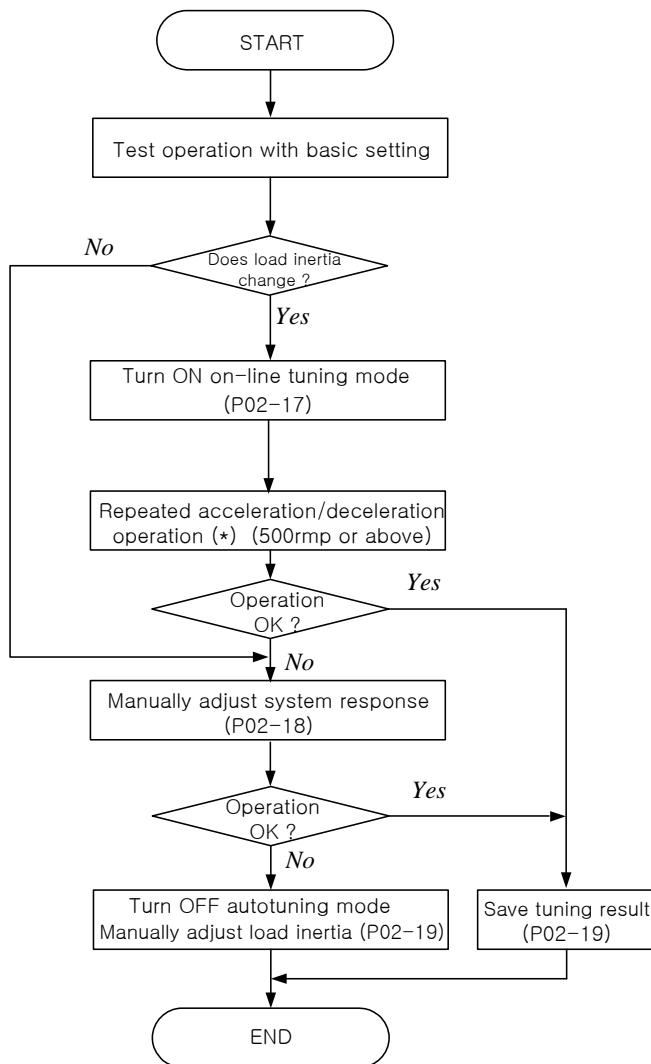

4.4.1 System response setting

The system response is set (P02-18) manually before using autotuning. The following P05-05, P05-06, P03-05, P03-06, P03-07, P03-08 and P02-16 automatically changes and when the autotuning function is set to “ON”, the tuning operation is executed with the target of manually set value.

P02-18 (System response setting)	P05-05 (Position loop gain 1)	P05-06 (Position loop gain 2)	P03-05 (Speed control loop gain 1)	P03-06 (SC TC 1)	P03-07 (Speed control loop gain 2)	P03-08 (SC TC 2)	P02-16 (Command torque filter TC)
1	2.0	5.0	2.0	200.0	5.0	120.0	4.5
2	5.0	10.0	5.0	120.0	10.0	80.0	3.5
3	10.0	15.0	10.0	80.0	15.0	60.0	3.0
4	15.0	20.0	15.0	60.0	20.0	45.0	2.5
5	20.0	25.0	20.0	45.0	25.0	40.0	2.0
6	25.0	30.0	25.0	40.0	30.0	30.0	1.5
7	30.0	35.0	30.0	30.0	35.0	25.0	1.3
8	35.0	45.0	35.0	25.0	45.0	18.0	1.2
9	45.0	55.0	45.0	18.0	55.0	17.0	0.9
10	55.0	70.0	55.0	17.0	70.0	13.0	0.8
11	70.0	85.0	70.0	13.0	85.0	11.0	0.6
12	85.0	105.0	85.0	11.0	105.0	10.0	0.5
13	105.0	130.0	105.0	10.0	130.0	8.0	0.4
14	130.0	160.0	130.0	8.0	160.0	6.0	0.25
15	160.0	200.0	160.0	6.0	200.0	5.4	0.2
16	200.0	240.0	200.0	5.4	240.0	5.0	0.15
17	240.0	300.0	240.0	5.0	300.0	3.5	0.1
18	300.0	350.0	300.0	3.5	350.0	3.2	0.0
19	350.0	360.0	350.0	3.2	360.0	3.1	0.0

- ◆ If you set the system response to high, it increases the servo system gain to increase the response. But if the set value is too high, it can cause noise and vibration in the motor. In this case, appropriately lower the set value.

4.4.2 Autotuning setting sequence

- ♥ Autotuning is set by system response setting (P02-18) manual part, by position loop gain, speed control loop gain, SC TC and torque command filter and the system inertia ratio (P02-19) is set by the autotuning mode (P02-17).

4.4.3 Precaution during autotuning

- 1) Operate at 500[rpm] or higher speed.
- 2) Manually set the acceleration/deceleration time setting of speed shortly [ms]. If the acceleration/deceleration time is set too long, the speed deviation during the algorithm processing time is too small to make estimation.
- 3) Avoid using autotuning when operating weak belt with lower mechanical strength.
- 4) Avoid using autotuning for system with load inertia abruptly changing.
- 5) When the P02-18 (System response setting) is too low, increase the value.
- 6) It does not apply when using the torque control mode.

4.5 Precaution for absolute encoder

In the host controller, when detecting the absolute position of the machine even when the power of the servo drive is turned off, you must use an absolute type servo motor and drive. If you connect the power to the absolute type servo system, you can make a machine system that can directly enable auto operation with additional position detection operation without the difference between the absolute type drive and standard type drive is whether there is a back-up battery.

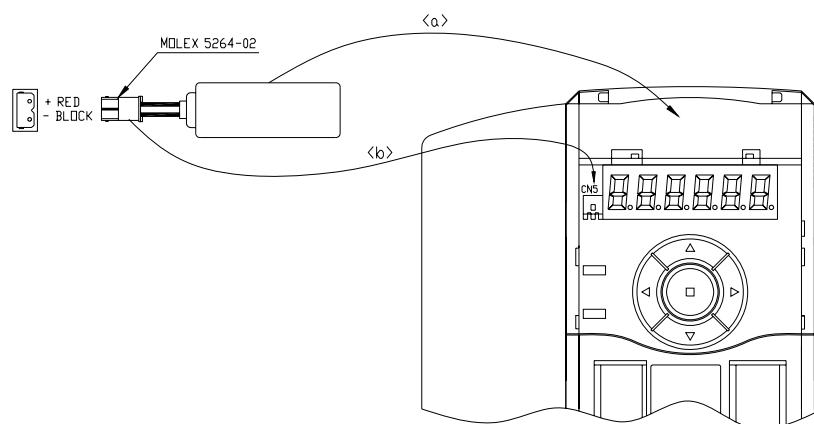

4.5.1 Battery handling

The battery supplies the back-up power to store the position information of the "Absolute encoder" even when the drive power is turned off.

1) Recommended battery specification

Connecting the battery to the host controller	Connecting the battery to the servo drive
Lithium battery Tekcell SB-AA0 type 3.6V 2400mAh	1. Connector attached type 2. Main unit: Lithium battery Tekcell SB-AA0 type 3.6V 2400mAh (Connect to CN5 of servo drive)

2) Battery connection

<a> : Open the cover and insert the battery unit in the arrow direction.

 : Connect the connector to CN5.

3) Battery replacement

The encoder battery alarm is generated when the battery voltage drops under 2.7 V. The alarm is generated by receiving the data from the absolute encoder when the power is connected to the servo drive. If the servo drive control power is ON and the battery voltage is dropped, the alarm will not be generated.

♥ Battery replacement method

- Replace the battery when the control power of the servo drive is ON. If you replace the battery when the servo drive control power is OFF, the absolute encoder must be initialized.
- After replacing the battery, turn the control power of the servo drive OFF.
- Check the condition after turning the control power of the servo drive ON.

**Caution**

- Wire the battery to the one of the servo drive side or the host controller side. It is dangerous when you connect to both sides because it can create a short circuit.

4.5.2 Absolute value encoder initialization

1) When the absolute value encoder requires initialization

- During first operation
- When the encoder cable is separate from the servo drive
- After replacing the battery
- When the absolute encoder related alarm is generated

2) Absolute value encoder initialization (reset) method

- 17bit serial absolute value encoder: When it sets the origin by itself, set the parameter (P01-20) to "ON" and it will change to "ON =>OFF" to initialize the current position. (Multi-Turn data reset). When the absolute value related alarm is generated, execute alarm reset by using alarm reset contact point (ALMRST).
- When it sets the origin by itself, set the parameter (P01-20) to "ON" and it will change to "ON =>OFF" to initialize the current position. Or connect the power to encoder terminal ERST (CN2-20) and Vcc terminal (CN2-19) for more than 4 seconds.

Chapter 5

Servo operating

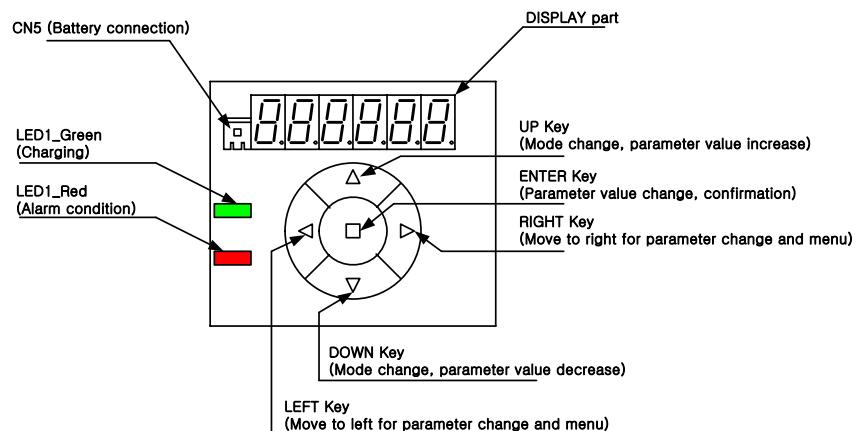

Chapter 5 explains the operation of the loader for servo operation to set the servo parameter and display the status.

5.1 Basic of loader	5-1
5.2 Operation of internal mount loader	5-2
5.3 Operation of digital loader.....	5-9

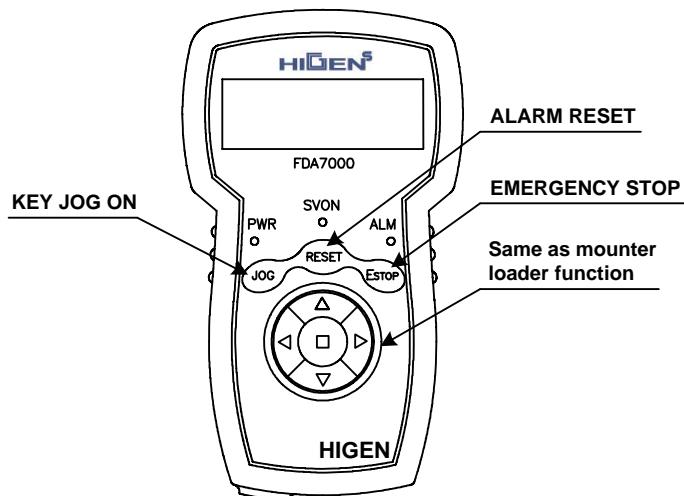

5.1 Basics of loader

You should install the servo motor and drive according to the installation condition. After connect the power supply circuit and motor wiring. You should check the motor parameter (P01--). Use the loader to check that motor parameter is set to normal running condition. This parameter show to you the basic information for the servo motor which is connected to the drive. Then you must monitor the group indicating the motor status (StE--) to check whether various commands and limits values are properly set. And if this is your first time operating the unit, you must verify the stability through autotuning or test operation of Jog and Auto Jog. Autotuning operation can be done online and you do not need to execute this operation when the gain of stable control system is ensured offline.

[Overview diagram of internal mounter loader]

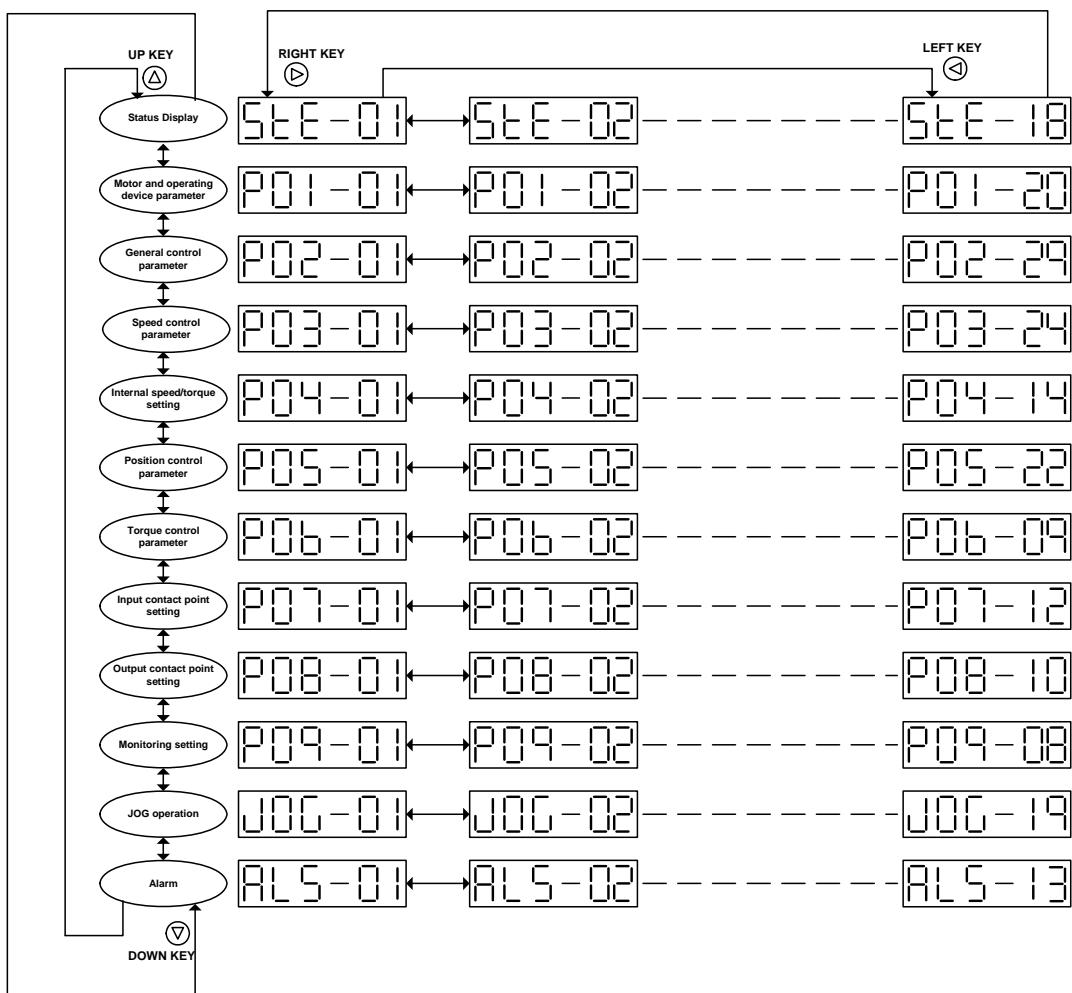

[Overview diagram of digital loader]

5.2 Operation of internal mount loader

5.2.1 Display flow

If the power is correctly supplied, the mount loader display on the front panel of the servo drive a message. The internal mount loader is composed of 7 segment LED and 6 digits. You can set the parameter, display the status, check the sequence and alarm record by the loader. The key function of the loader is composed of X-Y coordination system which have vertical axis (Up and Down button) and horizontal axis (Right and Left button). The following diagram shows an overview aspect for loader menu.

- ♥ When the power is initially connected, the displayed screen differs depending on the coordinate (StE-01) parameter. For example, if StE -01 = 1203, 12 refers to the StE menu and 03 to the StE -03.

[1st and 2nd digit value]

Name of higher menu	P01 mode	P02 mode	P03 mode	P04 mode	P05 mode	P06 mode	P07 mode	P08 mode	P09 mode	JOG mode	ALS mode	StE mode
1 st and 2 nd digit value	01	02	03	04	05	06	07	08	09	10	11	12

Refer to each parameter item for the menu number of 3rd and 4th digit.

5.2.2 Parameter change

1) Parameter change

UP : Positive direction mode change, increase in blinking value

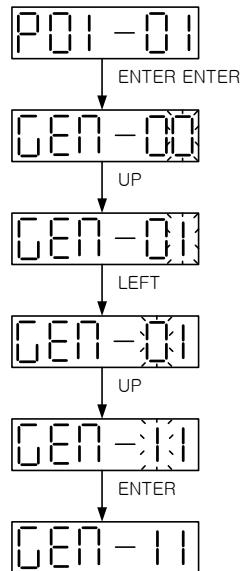

DOWN : Negative direction mode change, decrease in blinking value

LEFT : Move blinking value to left

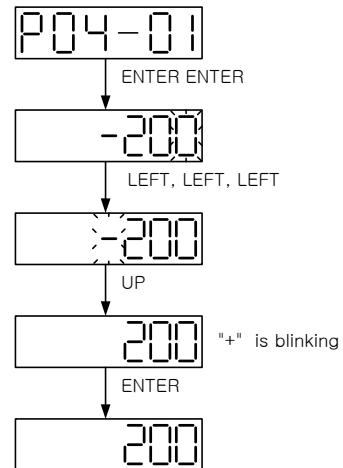

RIGHT : Move blinking value to right

ENTER : Display parameter value, start and end of parameter change

※ Enter motor ID (00 → 11)

※ Enter digital input speed 1 (-200 → +200)

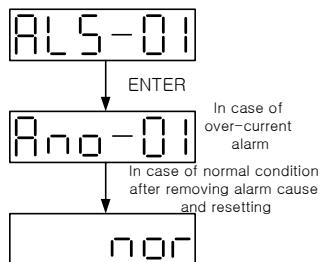

- ◆ When changing the parameter “-“ sign indicates the blinking value but “+“ sign does not indicate anything.

5.2.3 Alarm related processing part

1) Currently generated alarm display menu

ENTER : Indicated generated alarm value

Currently generated alarm display menu shows the currently generated alarms. Even though it is free to move to the next menu, the alarm cannot be reset and the motor cannot be operated.

2) Alarm reset menu

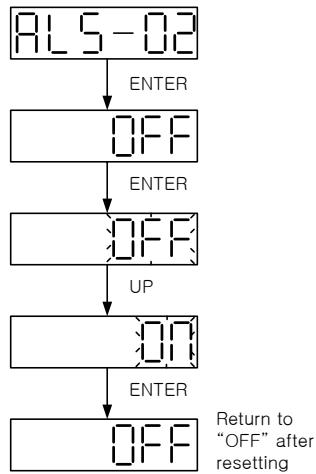

UP : ON/OFF change

DOWN : ON/OFF change

LEFT : Move menu

RIGHT : Move menu

ENTER : Start and end of parameter change (Current alarm cancel function operation)

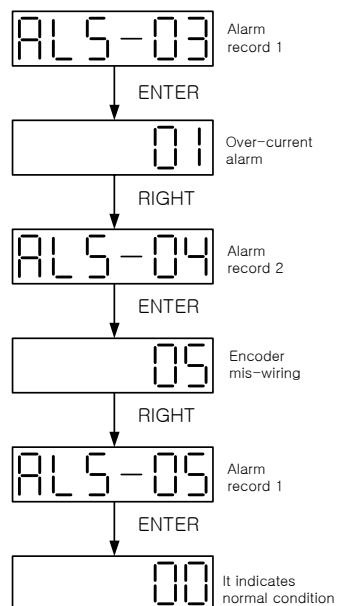

As the function to reset the alarm generated in the current system, the alarm reset menu is the same function as external input reset.

3) Alarm record display menu

Alarm record display menu saves the latest 10 alarms in each menu in the sequence of ALS-03 ~ ALS-12. The following diagram is the case assuming that the over-current (01) alarm is generated after the encoder mis-wiring (05) alarm is generated during servo operation.

Emergency stop alarm (emc_stop) is not saved in the alarm record and each alarm record menu value is “00” for normal operation.

5.2.4 Jog operation

1) Key jog mode setting (JOG-01)

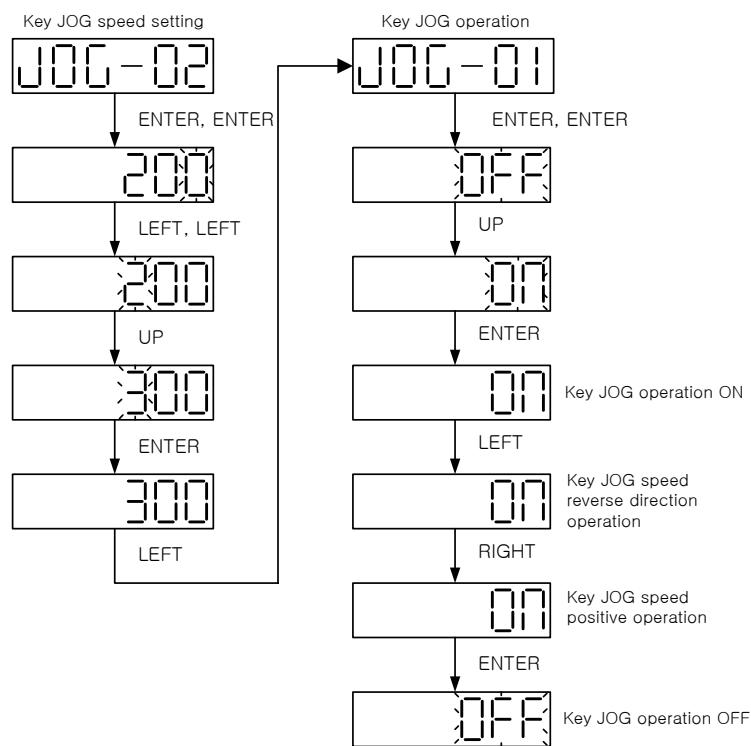

UP : Positive direction mode change, increase blinking value

DOWN : Negative direction mode change, decrease in blinking value

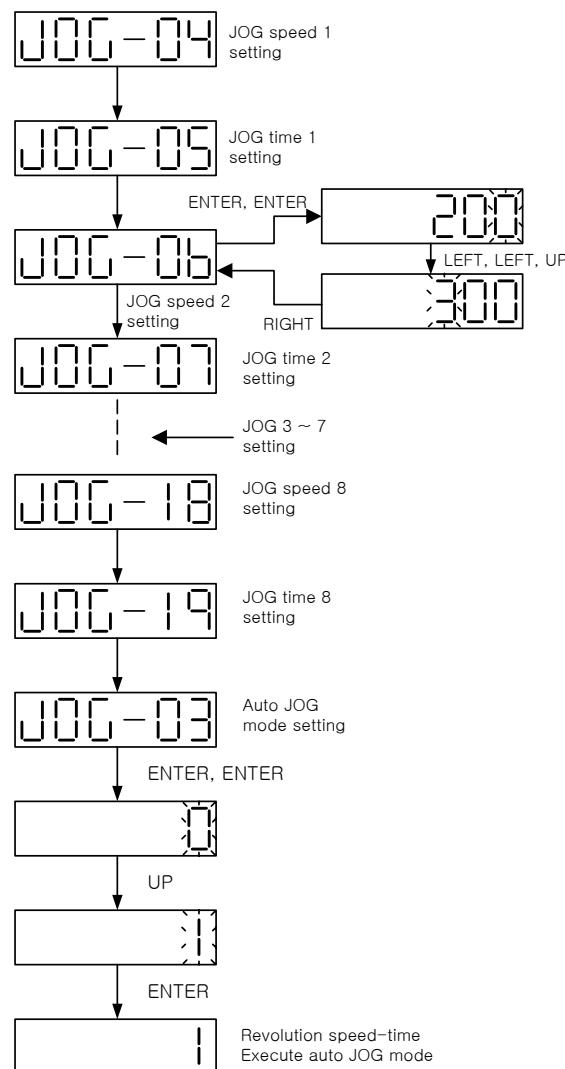

LEFT : Command reverse direction revolution, move blink to left when entering key jog speed (JOG-02)

RIGHT : Command positive direction revolution, move blink to left when entering key jog speed (JOG-02)

ENTER : Indicates parameter value, start and end of parameter change

2) Auto jog mode setting

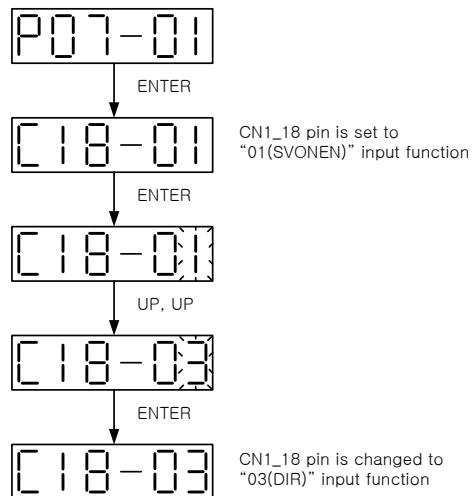

Auto jog mode supports 8-steps repeated pattern operations, and the 1st auto jog mode that sets the revolution speed [rpm] and revolution time [sec] and 2nd auto jog mode that sets the revolution time [rpm] and revolutions [rev] are supported.

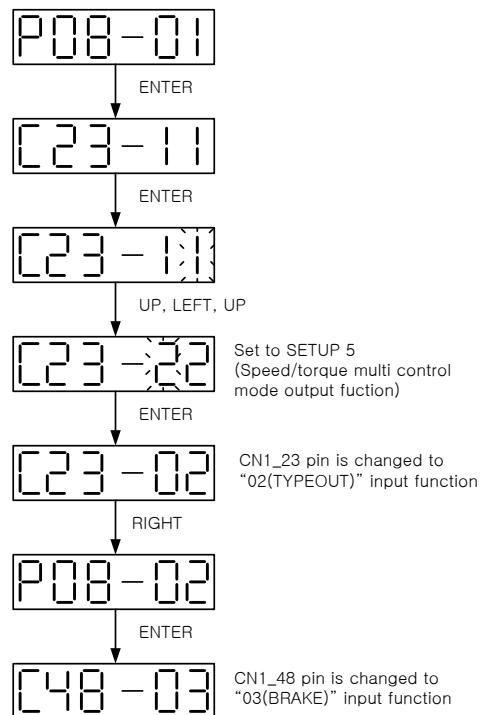

JOG-03 Set value	Operation explanation
0	Do not use auto jog mode
1	Use auto jog mode for revolution speed – revolution time
2	Use auto jog mode for revolution speed – revolutions

5.2.5 I/O contact point function parameter setting

1) Input contact point function setting (P07 mode)

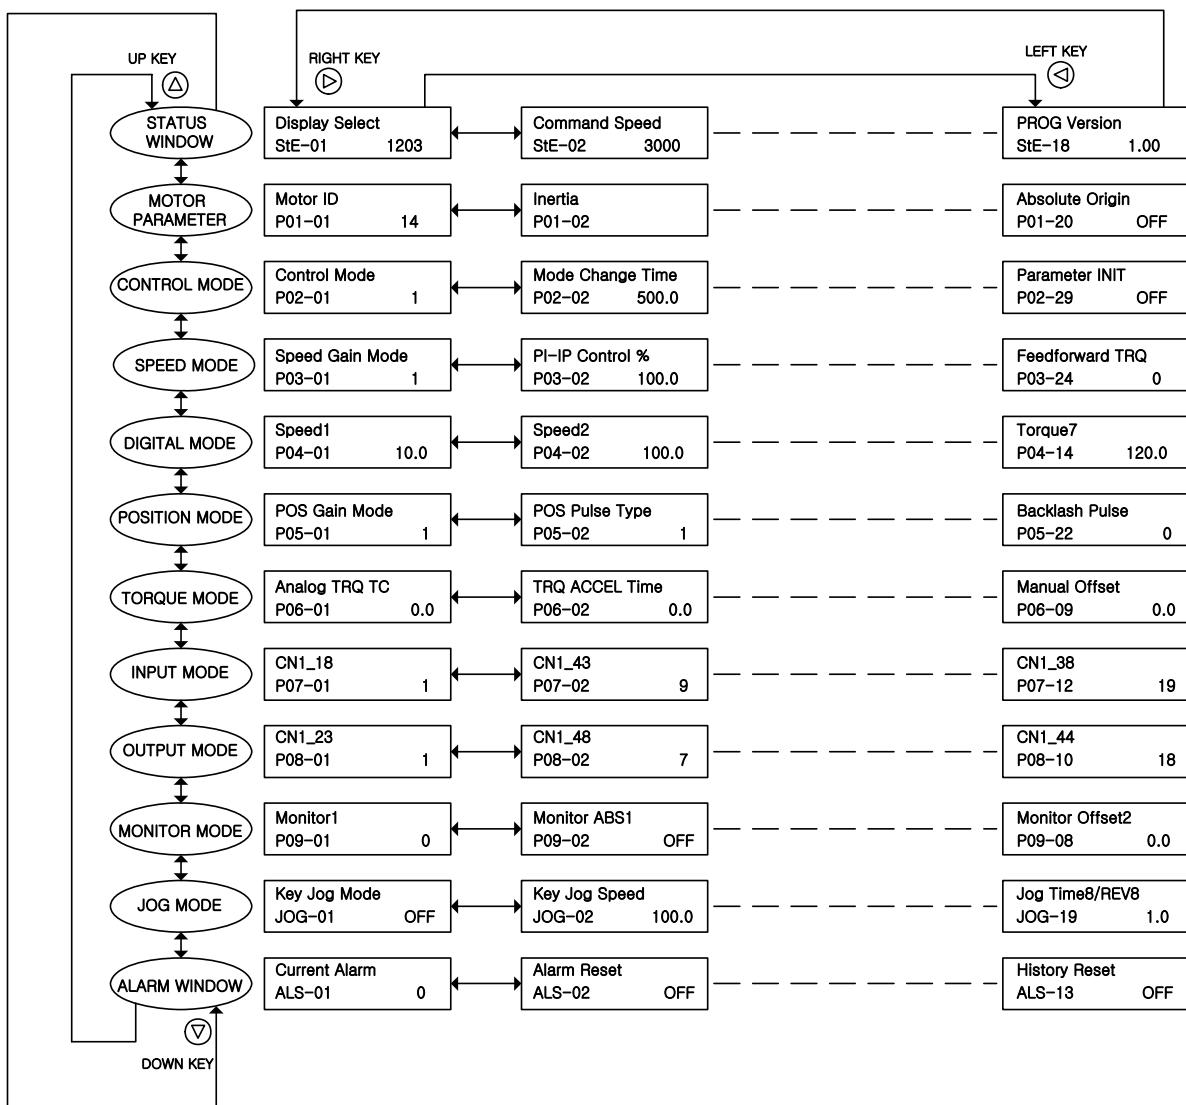

2) Output contact point function setting (P08 mode)

5.3 Operation of digital loader

5.3.1 Display flow

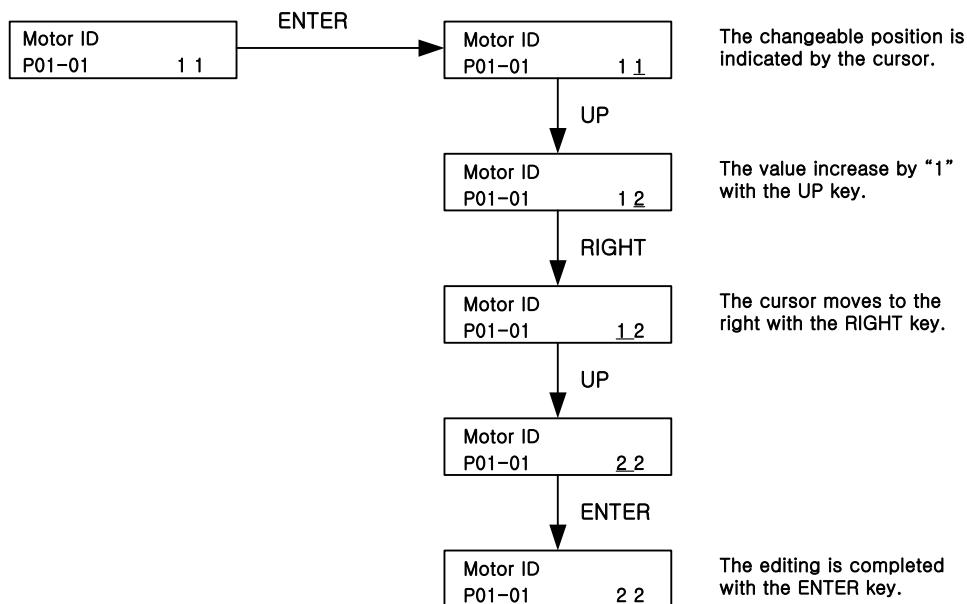

If the power is supplied and connected to digital loader correctly, LCD window of the digital loader display a message. The digital loader has LCD window and function key on front panel. You can set the parameter, display the status, check the sequence and alarm record by the loader. The following diagram shows an overview aspect for digital loader menu.

5.3.2 Parameter change

Even though the changeable range differs by the menu, the operating method is the same, and the case of P01-01[Motor ID] is used as a representative example.

- JOG Key : Key Jog ON
- RESET Key : Alarm reset
- ESTOP Key : Emergency stop
- UP Key : Mode change (increase), increase parameter value
- DOWN Key : Mode change (decrease), decrease parameter value
- RIGHT Key : Move right when changing menu and parameter
- LEFT Key : Move left when changing menu and parameter
- ENTER Key : Change parameter, confirm parameter

Chapter 6

Troubleshooting and check

Chapter 6 explains the method of action and check for the issues that can occur during servo operation.

6.1 Troubleshooting	6-1
6.2 Check.....	6-4

6. Troubleshooting and check

HIDEN^s

6.1 Troubleshooting

6.1.1 Servo motor

Symptom	Cause	Inspection	Corrective Actions
Motor does not start.	Parameter mis-setting	Check the parameter of motor, encoder, encoder type, control mode etc.	Reset parameter. (Refer to Chapter 3)
	Overload	Check the revolution condition of the machine.	Readjust the machine device.
	Motor defect	Measure the motor lead terminal with a tester.	For normal voltage, replace the motor.
	Loose screw	Check the connection part with drive.	Tighten loose parts.
	External mis-wiring Cable disconnection	Check motor and encoder wiring.	Rework on the wiring. Replace the cable.
	Encoder defect	Check the output wave shape.	Replace the encoder. (Request for repair)
Motor revolution is unstable	Wiring connection defectiveness	Check the connection of the motor lead terminal.	Correct the wiring.
	Low input voltage	Check the drive input voltage.	Correct the power.
	Overload	Check the machine condition.	Remove any particle on the revolution part and supply lubricant (or grease)
Motor is over-heated.	High ambient temperature	Check the surrounding temperature of the motor installation part. (40°C or below)	Reduce ambient temperature to 40 °C max.
	Contamination on motor surface	Check whether there are any alien particles on the motor surface.	Clean dust and oil dirt.
	Overload	Check the load rate of the drive. Check the acceleration/deceleration frequency.	Reduce load. Increase acceleration/deceleration time.
	Low magnetic power of magnet	Check the comparator voltage and voltage wave shape.	Replace the motor.
Abnormal noise is generated.	Coupling defect	Check the screw condition of the coupling and copper core of the connection part etc.	Readjust the coupling.
	Bearing problem	Check the bearing vibration and abnormal noise.	Contact our company.
	Parameter mis-setting(Motor/encoder ID, inertia ratio, gain, TC)	Check the control parameter.	Refer to parameter setting method in chapter 3.

6. Troubleshooting and check

HIDEN^s

6.1.2 Servo drive

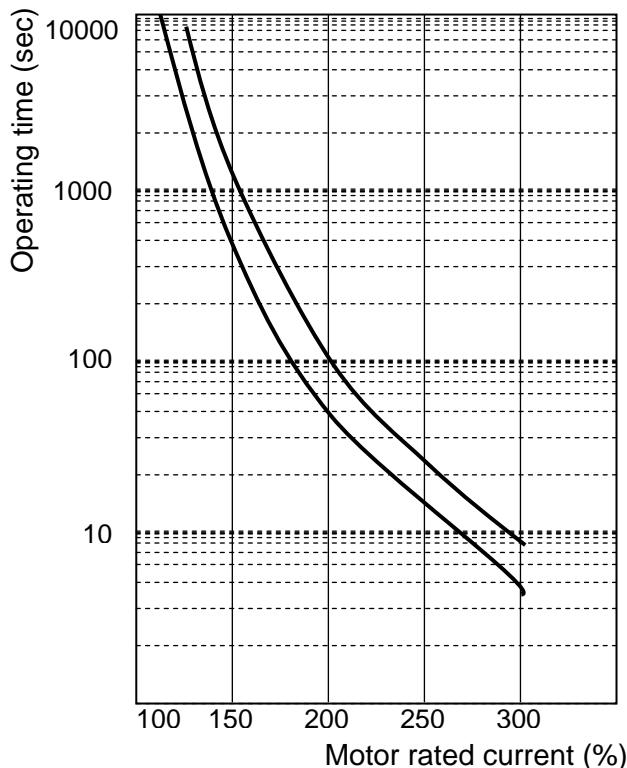

When an alarm occurs in servo drive and error signal output contact point (ALARM) goes OFF and the motor is stopped by dynamic brake.

Display	Content	Cause	Corrective Actions
nor	Normal condition		
Ano-00 EMER STOP	Emergency stop	Turn external ESTOP contact point input OFF.	Check external DC 24V power. Check ESTOP contact point ON status
Ano-01 OVER CURNT	Over-current	Servo drive output terminal (U, V, W) short circuit, output over-current	Check output terminal wiring, re-operate after resetting, replace drive when O.C continues
Ano-02 OVER VOLT	AC link over-voltage	Input over-voltage (280V or above) Regenerated resistance burnt, Overload GD ²	Use input voltage of 230V or below Replace brake resistance, increase acceleration/deceleration time, replace servo drive
Ano-03 OVER LOAD	Overload	Mechanical overload Motor mis-wiring	Check load condition, check motor and encoder wiring
Ano-04 POWER FAIL	Main power issue	Main power blocked when SERVO is ON	Check 3 phase main power (R, S, T) input condition
Ano-05 LINE FAIL	Mis-wiring of motor and encoder	Motor and encoder related set value error, motor and encoder mis-wiring, encoder defect, mechanical overload	Check motor, encoder, wiring and set value, remove overload
Ano-06 OVER SPEED	Over-speed	Over-gain, parameter set value error, over gravity load	Adjust gain Check parameter (P03-15, P03-16) Remove over gravity load
Ano-07 FOLLOW ERR	Over-error of position tracking	Abrupt acceleration/deceleration, gain set value error, command pulse over-frequency (300kpps or above), mis-wring, mechanical overload	Adjust position gain, increase menu (P05-09) set value, adjust command pulse frequency, check motor and encoder wiring.
Ano-08 Output NC	Output(U,V,W) missing	Output (U, V, W) missing	Check motor wiring, replace servo drive
Ano-09 PPR ERROR	Encoder pulse rate setting error	Encoder ID setting error	Accurately set the encoder ID (P01-12)
Ano-10 ABS DATA	Absolute value encoder data transmission error	Absolute value encoder data transmission error	Re-transmit the absolute value encoder data after resetting.
Ano-11 ABS BATT	Battery Alarm	Battery voltage is 2.8V or below	Replace battery (3.6V)
Ano-12 ABS MDER	ABS encoder multi turn data transmission error	ABS encoder multi turn data transmission error	Re-transmit the absolute value encoder data after resetting.

6. Troubleshooting and check

HIDEN^s

Ano-13 Output EC	Output U,V,W Mis-wiring	Output U, V, W mis-wiring (Error Connection)	Check motor wiring, replace servo drive
Err - 01	Set value input error	Trial of entry of parameter that cannot be changed when servo is ON, change in parameter locking condition	Change the set value after servo is OFF, cancel parameter lock setting menu (P01-19)
Err - 02	Set value error	Parameter setting error	Input value within set range.

Rated current (%)	Overload operation time		
	Min.	Max.	Set value
100	∞	∞	
120	∞	∞	
150	300	1500	760
200	60	150	107
250	20	40	30
300	6	15	7

[Servo drive overload characteristics curve]

(note) If Ano-03 (OVER LOAD) happens often, refer servo drive overload characteristic-curve and re-establish suitable load of servo motor.

6.2 Check

Caution

- When checking the unit, always turn off the power and wait for more than 10 minutes to pass before checking the unit because charged voltage can remain in DC Link capacitor to cause an accident.

- Check any pieces of wire, dust, particles accumulated inside and clean appropriately.
- Check whether the screw of the terminal is loose and check whether they are tightened.
- Check if there are problems of parts (discoloration, damage, disconnection).
For the connection test of the control circuit, use the high resistance range on the tester, and do not use a megger or buzzer.
- Check whether the cooling fan is operating normally.
- Check if there are any abnormal sounds (motor bearing, brake part).
- Check whether there are any damages or cracks to the cables (Especially detector cable).
Especially during operation, execute periodical checks according to the using condition during operation.
- Check and correct any misalignment of center of load connecting axis.

Chapter 7

Connection with host controller

Chapter 7 shows the example of connection with representative host controller.

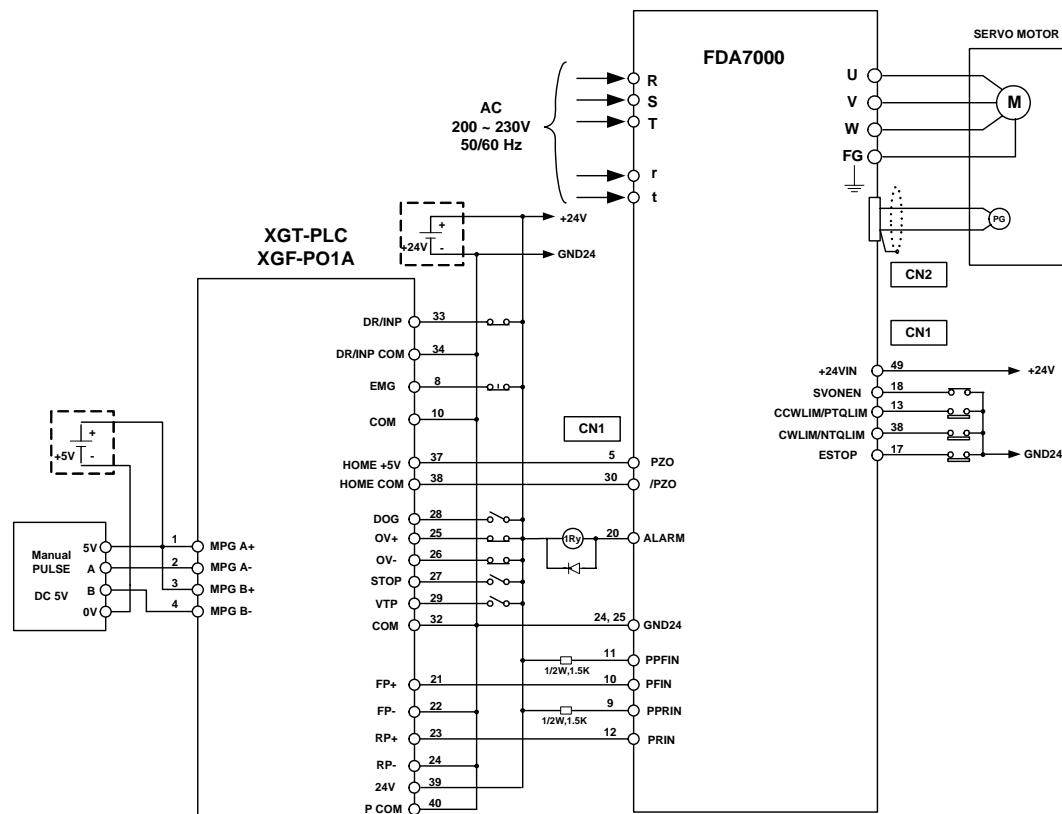

7.1 Example of connection with host controller 7-1

7.1 Example of connection with host controller

Connect with LS Industrial System XGT-Series position decision unit XGF-PO1A

→ This is an example of position control mode servo system operation.

(Note) After connecting the power, it takes about 1-2 seconds until the alarm signal leads to normal operation. Consider this when designing the power connection sequence. Also the alarm signal operates alarm detection relay 1Ry to turn on the main circuit power of servo drive.

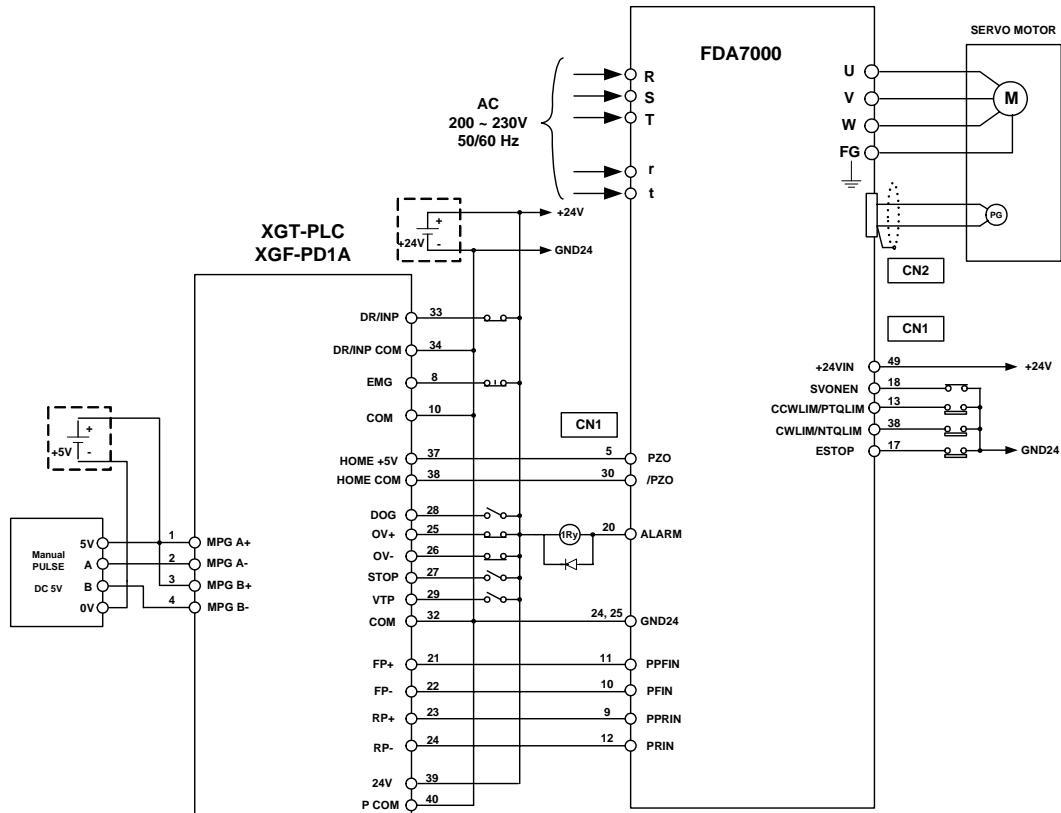

It only has the signals related to LS Industrial Systems XGF-PO1A and FDA7000 Series
(Note) The above connection is only shown in case of P07-01=27(Position control mode)

7. Connection with host controller

HIDEN^s

Connect with LS Industrial System XGT-Series position decision unit XGF-PD1A

→ This is an example of position control mode servo system operation.

(Note) After connecting the power, it takes about 1-2 seconds until the alarm signal leads to normal operation. Consider this when designing the power connection sequence. Also the alarm signal operates alarm detection relay 1Ry to turn on the main circuit power of servo drive.

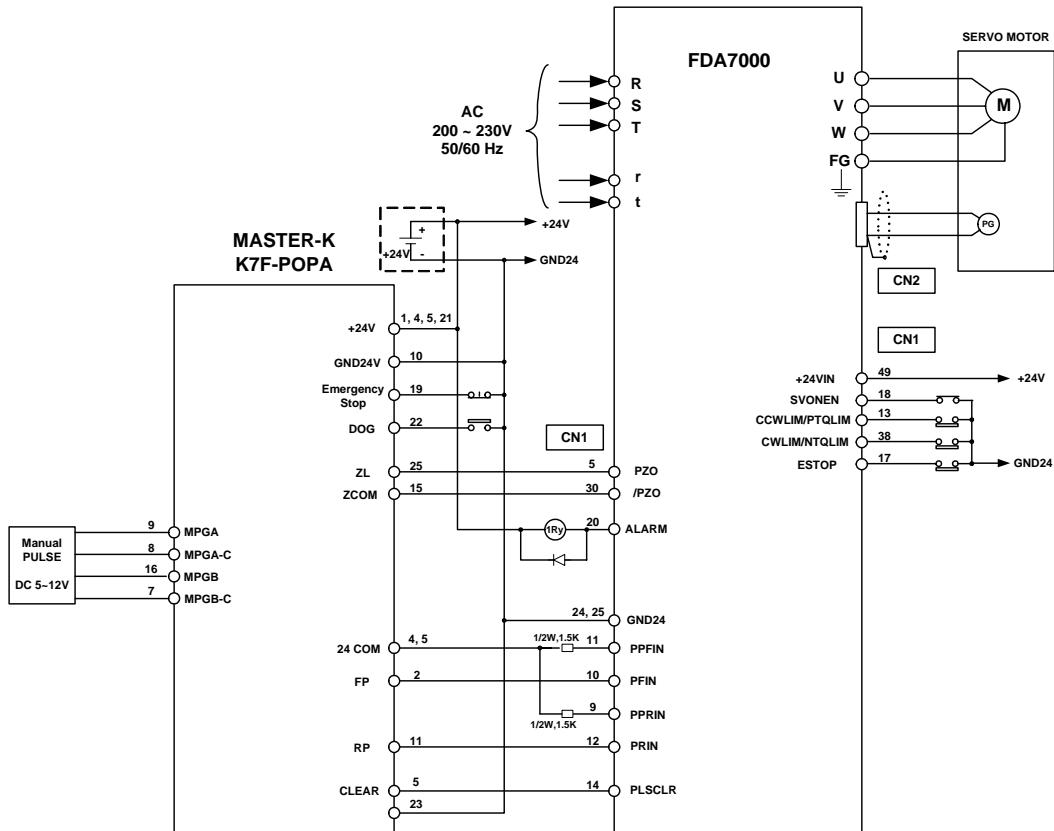

It only has the signals related to LS Industrial Systems XGF-PD1A and FDA7000 Series
(Note) The above connection is only shown in case of P07-01=27(Position control mode)

7. Connection with host controller

HIDEN^s

Connect with LS Industrial System MASTER-K position decision unit K7F-POPA

→ This is an example of position control mode servo system operation.

(Note) After connecting the power, it takes about 1-2 seconds until the alarm signal leads to normal operation. Consider this when designing the power connection sequence. Also the alarm signal operates alarm detection relay 1Ry to turn on the main circuit power of servo drive.

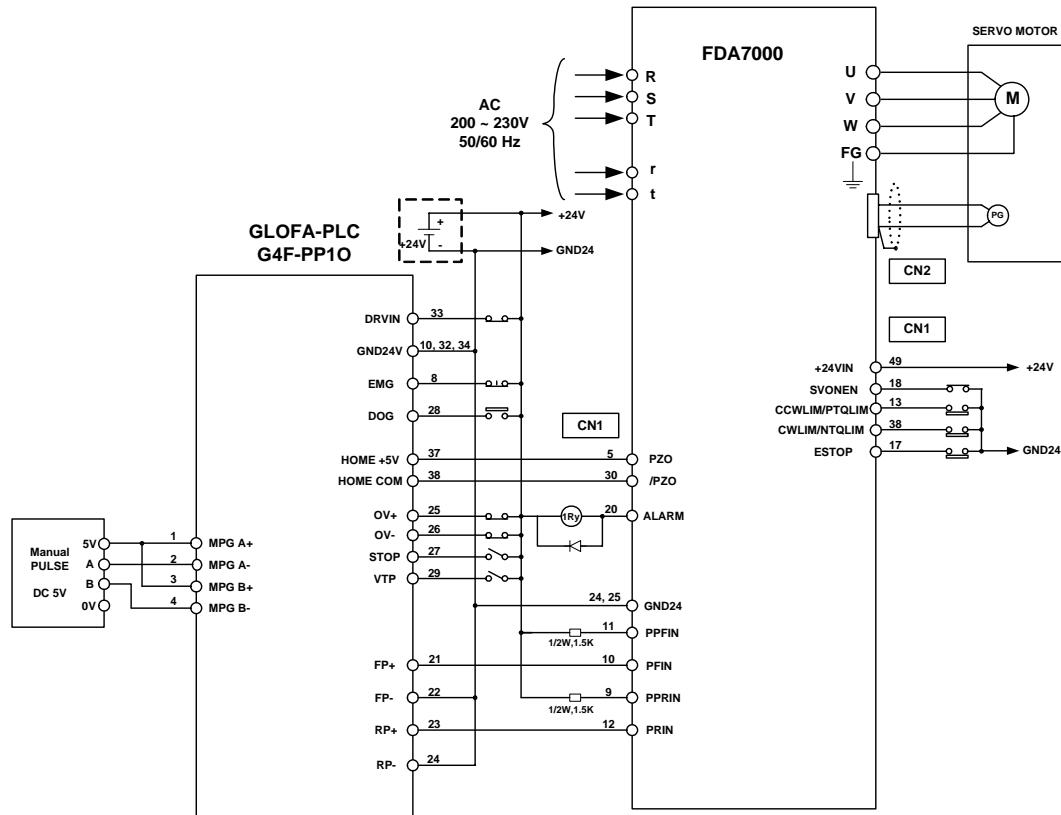

It only has the signals related to LS Industrial Systems K7F-POPA and FDA7000 Series
(Note) The above connection is only shown in case of P07-01=27(Position control mode)

7. Connection with host controller

HIDEN^s

Connection with LS Industrial Systems GLOFA-PLC position decision unit G4F-PP1O

→ This is an example of position control mode servo system operation.

(Note) After connecting the power, it takes about 1-2 seconds until the alarm signal leads to normal operation. Consider this when designing the power connection sequence. Also the alarm signal operates alarm detection relay 1Ry to turn on the main circuit power of servo drive.

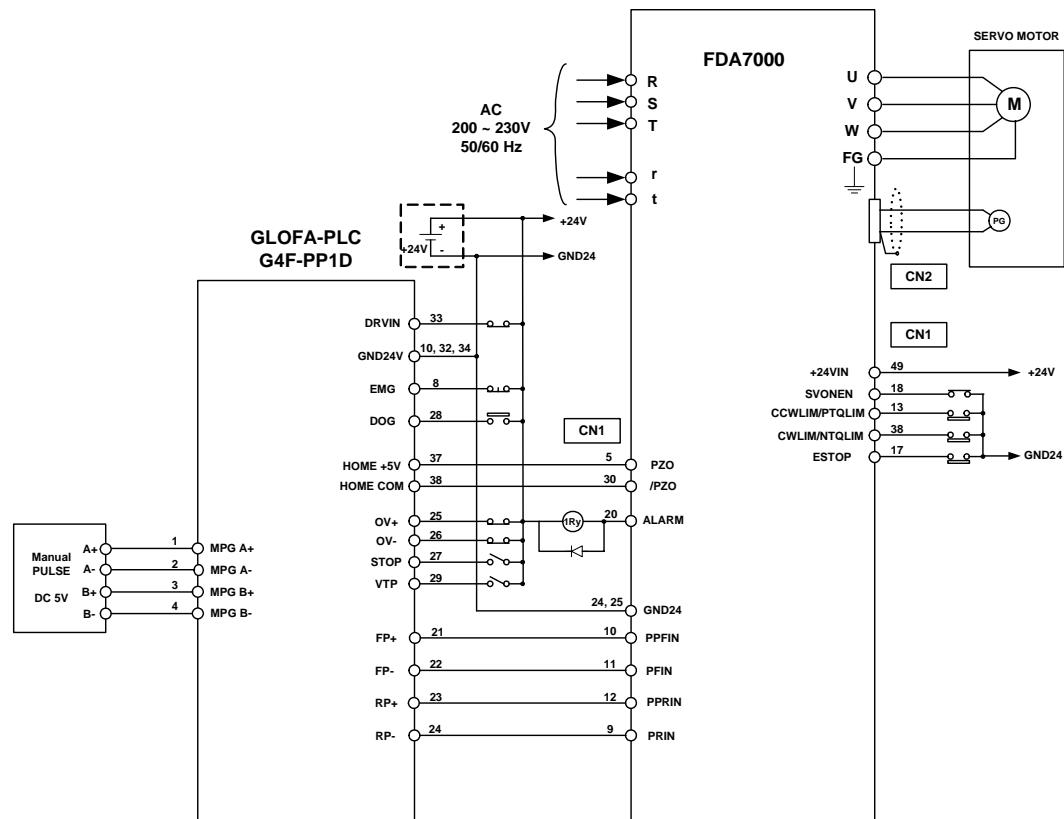

It only has the signals related to LS Industrial Systems G4F-PP1O and FDA7000 Series
(Note) The above connection is only shown in case of P07-01=27 (Position control mode).

7. Connection with host controller

HIDEN^s

Connection with LS Industrial Systems GLOFA-PLC position decision unit G4F-PP1D.

→ This is an example of position control mode servo system operation.

(Note) After connecting the power, it takes about 1-2 seconds until the alarm signal leads to normal operation. Consider this when designing the power connection sequence. Also the alarm signal operates alarm detection relay 1Ry to turn on the main circuit power of servo drive.

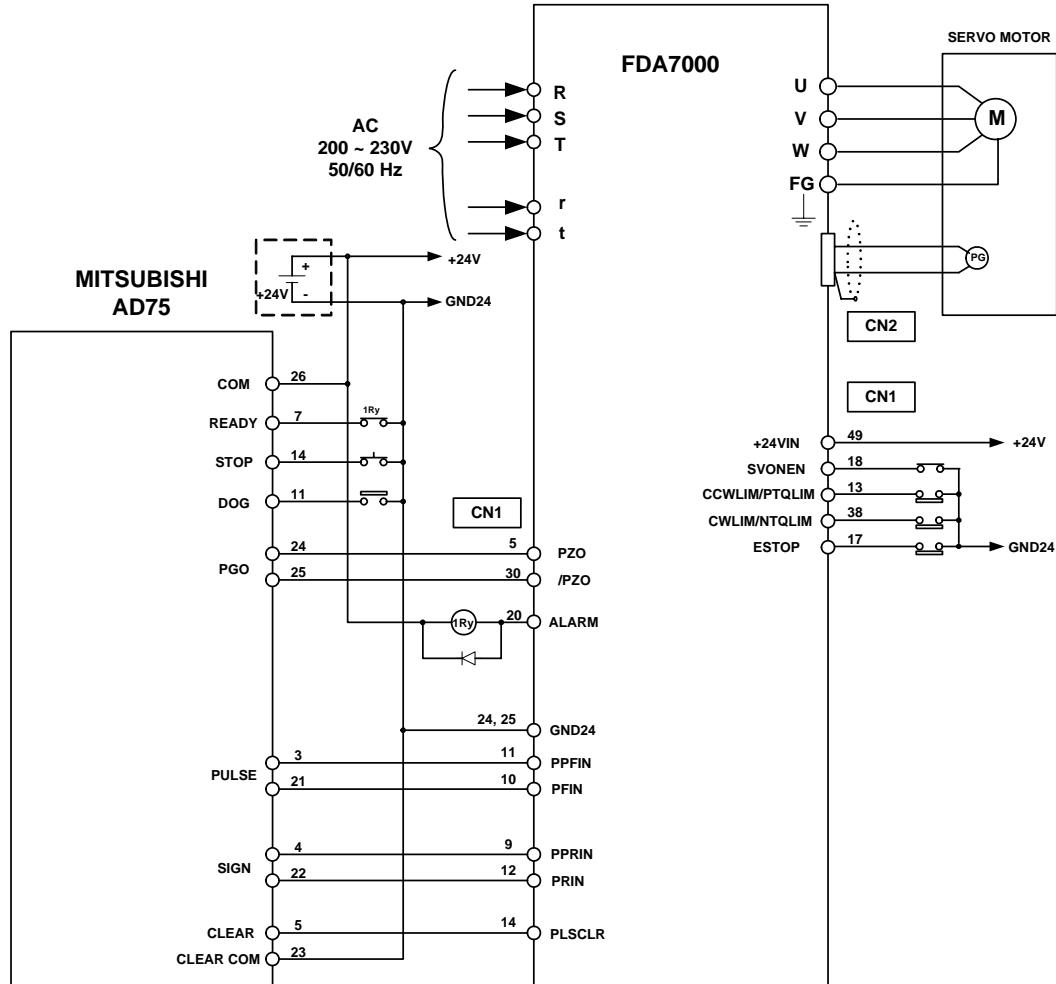

It only has the signals related to LS Industrial Systems G4F-PP1D and FDA7000 Series
(Note) The above connection is only shown in case of P07-01=27 (Position control mode).

7. Connection with host controller

HIDEN^s

Connection with Mitsubishi Electric position decision unit AD75

→ This is an example of position control mode servo system operation.

(Note) After connecting the power, it takes about 1-2 seconds until the alarm signal leads to normal operation. Consider this when designing the power connection sequence. Also the alarm signal operates alarm detection relay 1Ry to turn on the main circuit power of servo drive.

It only has the signals related to Mitsubishi AD75 and FDA7000 Series

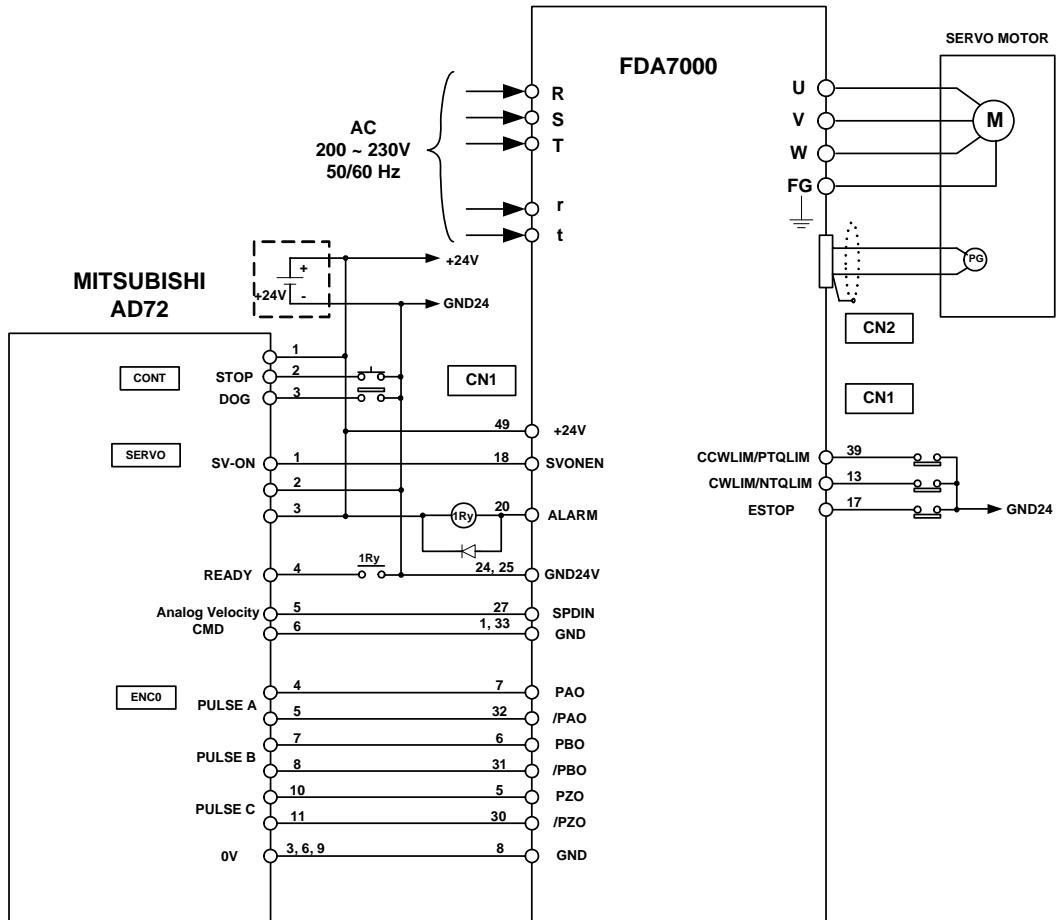

(Note) The above connection is only shown in case of P07-01=27 (Position control mode).

7. Connection with host controller

HIDEN^s

Connection with Electric position decision unit AD72

→ This is an example of speed control mode servo system operation.

(Note) After connecting the power, it takes about 1-2 seconds until the alarm signal leads to normal operation. Consider this when designing the power connection sequence. Also the alarm signal operates alarm detection relay 1Ry to turn on the main circuit power of servo drive.

It only has the signals related to Mitsubishi AD72 and FDA7000 Series

(Note) The above connection is only shown in case of P07-01=26 (Speed control mode).

Appendix I

Servo system application

Appendix I explains the application cases that can be utilized when applying the servo system.

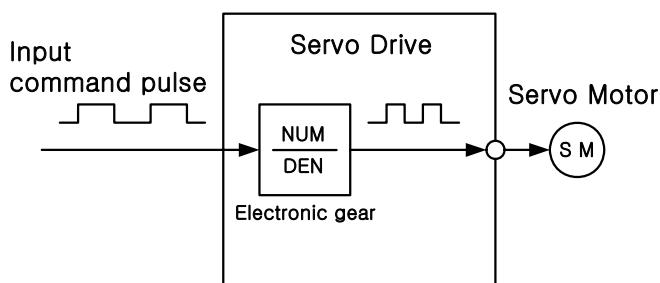

I .1 Position control application	I -1
I .2 Examples of other applications	I -3

I .1 Position control application

The electronic gear enable the workpiece movement distance per input reference command pulse from the host controller to be set to any value. One reference command pulse form the host controller, that is the minimum position data unit, is called a command unit.

[Electronic gear ratio setting]

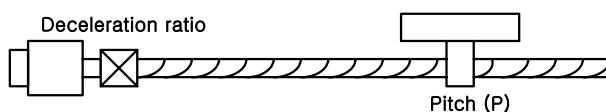

$$\text{Electronic gear ratio} \left(\frac{\text{NUM}}{\text{DEN}} \right) = \frac{\text{Number of motor encoder pulse} \times 4}{\text{Command unit}} \times \text{Reduction ratio}$$

- ♥ Reduction ratio is load shaft revolution over motor shaft revolution
- ♥ The command unit shows the minimum command unit of the position data to move the load.
- ♥ Encoder pulse rate

Encoder type	Number of motor encoder pulse (ppr)
Incremental encoder	2000 ~ 6000
Absolute 11bit	2048
Serial 17bit	32768

* Setting method of electronic gear

- ① Check the mechanical specification including reduction ratio, ball screw pitch etc.

- ② Determine the minimum unit(command unit) of the position data while feeds load per pulse.
: When moving the table by 0.001[mm] for 1[Pulse], the command unit is 0.001[mm].

- ③ Obtain the load feed rate per load axis rotation in the unit of command.

: Command unit = 0.001[mm], ball screw pitch = 5[mm],

Load feed per load axis revolution [Command unit] = $5/0.001 = 5000$ [Command unit]

- ④ Get electronic gear ration in case of reduction ratio $\left(\frac{b}{a}\right)$

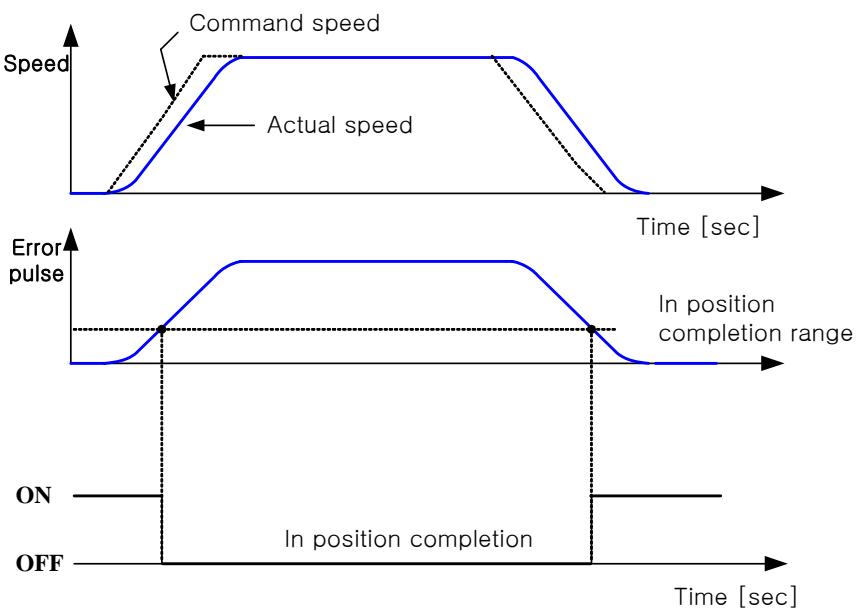

$$\text{Electronic gear ratio} \left(\frac{\text{NUM}}{\text{DEN}} \right) = \frac{\text{Number of motor encoder pulse} \times 4}{\text{Command unit}} \times \text{Reduction ratio}$$

- ⑤ The result of calculating the electronic gear ratio must be between 0.05~20.

- ⑥ Set the applicable parameter.

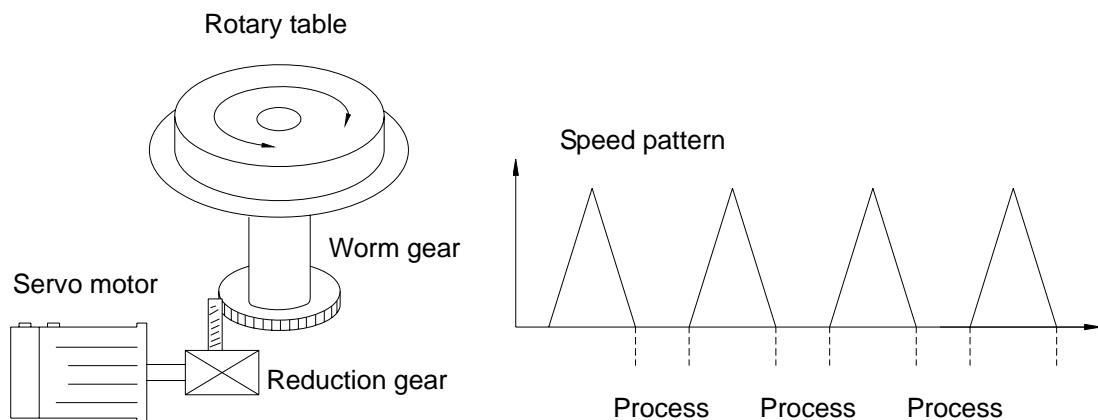

[Position completion range setting]

In position control mode, the positioning completed signal in output when the difference between the number of command pulse output by the host controller and the movement distance of the servo motor in less than value set in user menu P08.

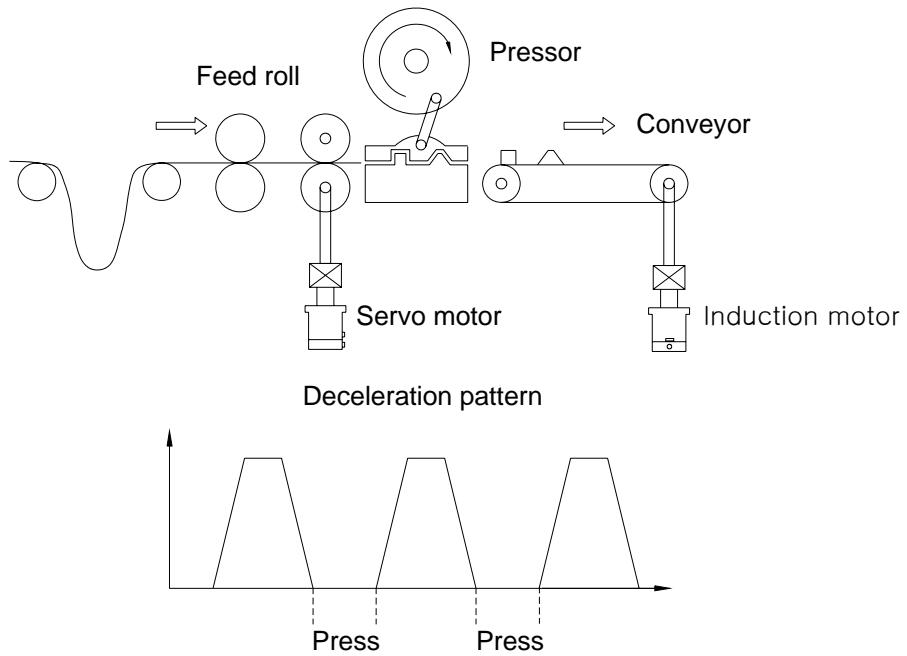

I .2 Example of other application

A. Rotary table

- Prepare the motion program in the host controller.
- Enter the operating signal and operate the angle.
- After angle operation, position decision completion signal(INPOS) is sent out externally.

B. Roll feeder

- Set the feed to the work.
 - Operate the position according to the feed start signal input from the press.
 - By using the position decision completion signal, execute the press work.
- (The position decision completion signal and feed start signal can be interlocked on the sequence.)

Appendix II

Noise control

Appendix II explains the noise control.

II .1 Wiring Precautions.....	II -1
II .2 Wiring for noise control	II -1

II .1 Wiring Precautions

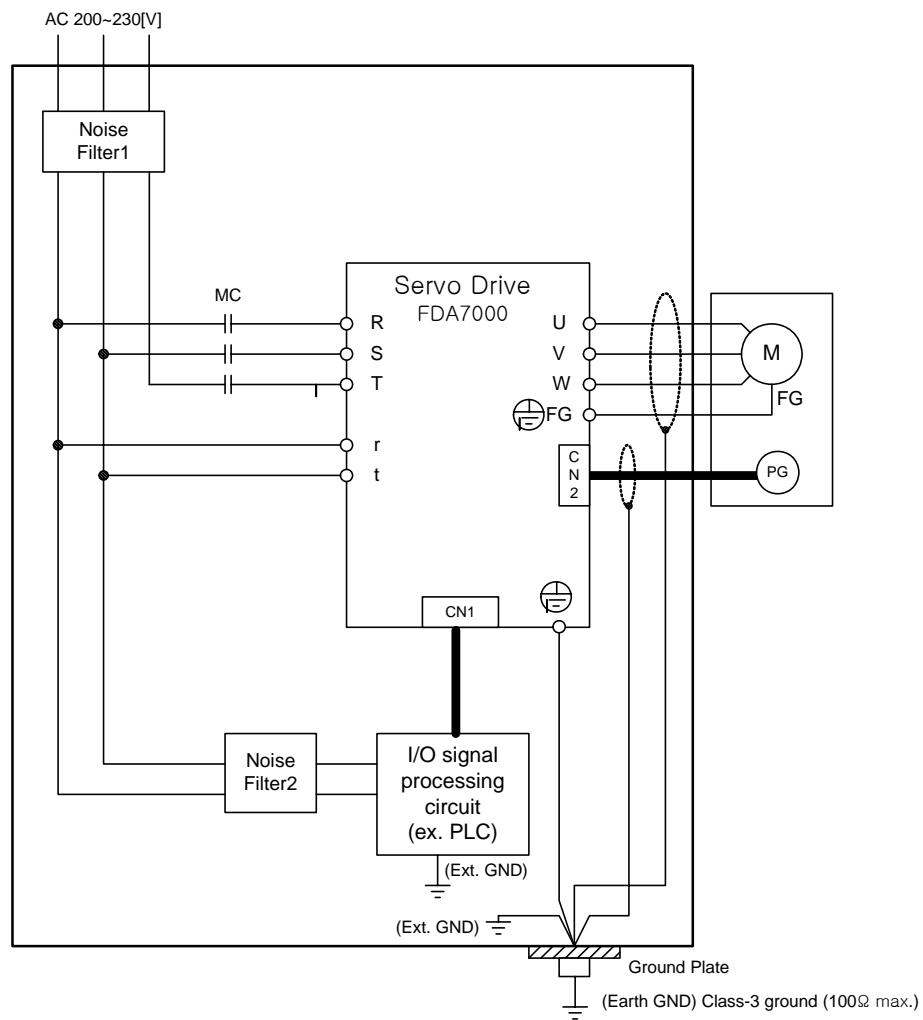

The FDA7000 servo drive uses high-speed switching in the main circuit. It may receive switching noise from these high-speed switching elements if wiring or grounding around the servo drive is not correct. To protect the servo drive system from the external noise install the noise filter in appropriate place as much as possible. To ensure safe and suitable operation, keep the following precautions.

- ① For wiring for reference inputs and encoders, use the specified cables.
 - Use the cables as short as possible.
- ② For ground wire, as thick a cable as possible.
 - At least class - 3 ground (100Ω max.) is recommended.
 - Ground to one point common only.
- ③ Do not bend or apply tension to cables.
- ④ Use a noise filter to prevent noise interference. FDA7000 is designed as an industrial device, it provides no mechanism to prevent noise interference.
- ⑤ To prevent malfunction due to the noise, take the following actions.
 - Location the input reference device and noise filter as close to the servo drive as possible.
 - Install a surge protector in the relay, solenoid and electromagnetic contactor coils.
 - The distance between a power line and a signal line must be at least 30 cm.
 - Do not put the power line and signal line in the same duct or bundle together.
 - Do not share the power supply with an electric welding machine or electrical discharge machine. When the servo drive is placed near a high frequency generator, install a noise filter and isolation transformer on the input side of the power supply line.

II .2 Wiring for noise control

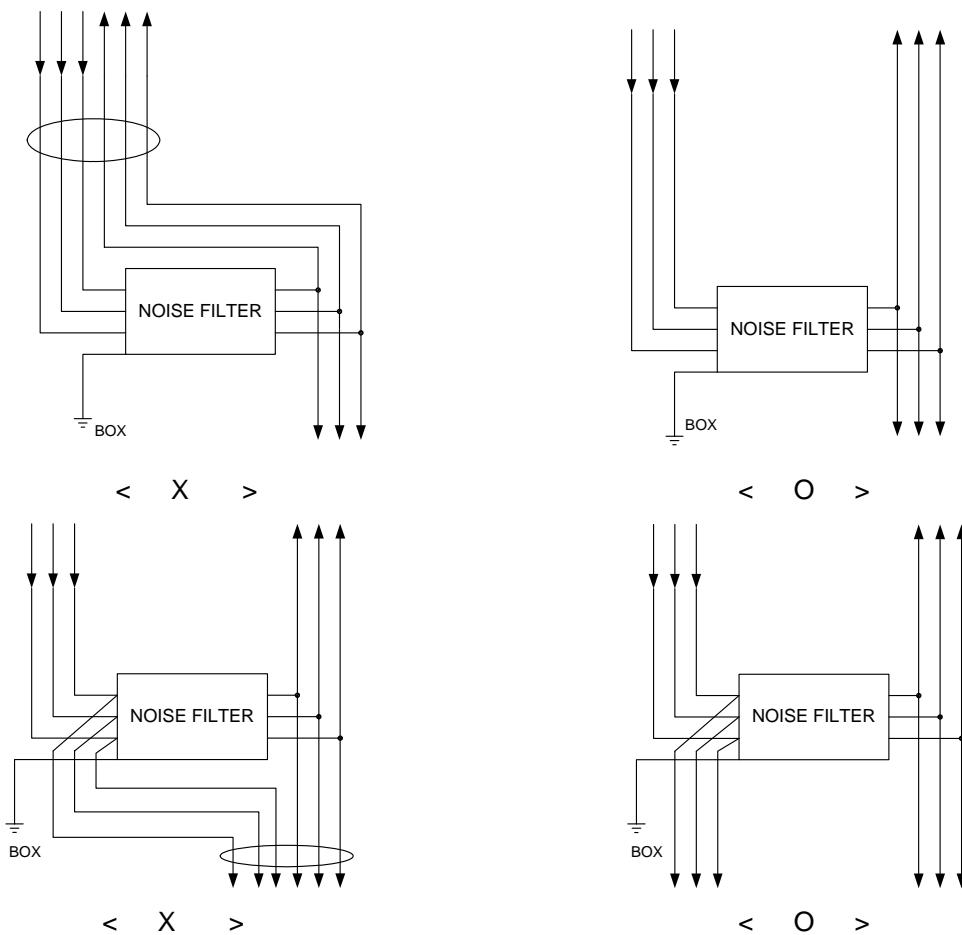

Always connect servo motor FG terminal to the drive frame ground terminal. If the servo motor is grounded via the machine, a switching noise current from the drive power unit through servo motor stray capacitance. The above grounding is required to prevent the adverse effects of the switching noise.

※ Example of wiring connected with ground connection

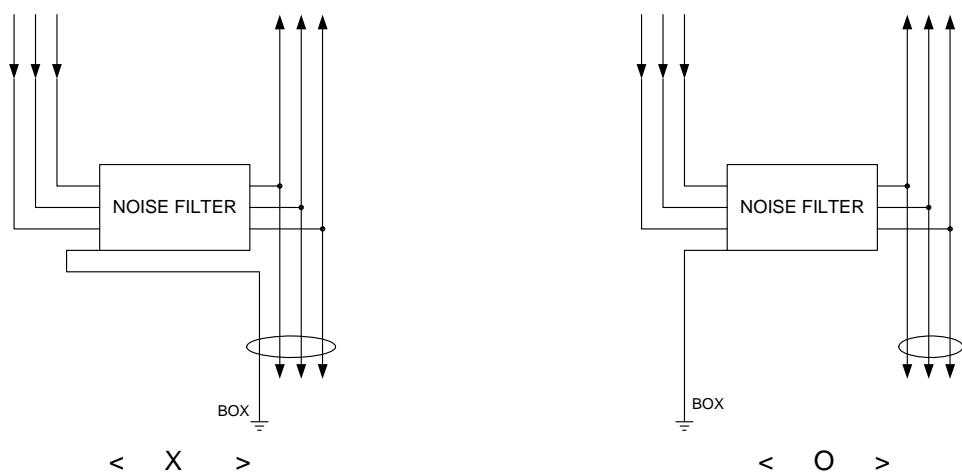

- Use the thick wire with a thickness at least 3.5[mm²] for ground to the casing.

* Example of noise filter wiring

[Do not put the input and output line in the same duct or bundle them together.]

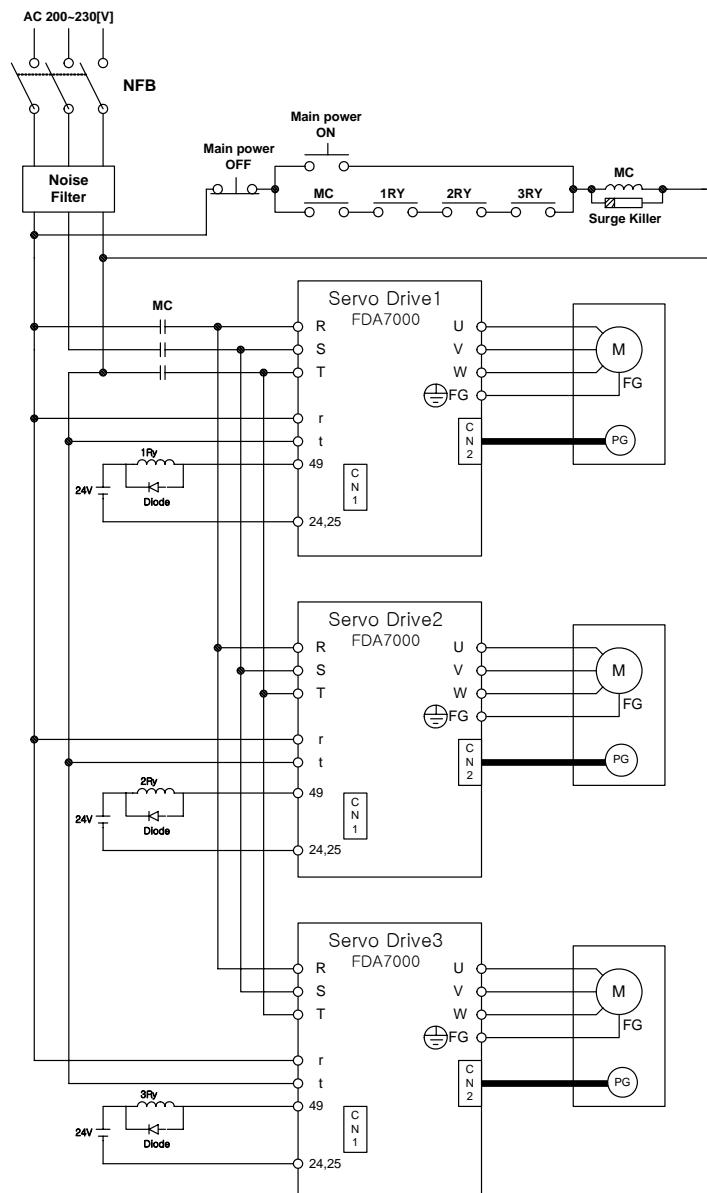

[Do not accommodate the noise filter ground line, output lines and other signal lines in the same duct or bundle them together.]

Appendix II Noise control

HIDEN^s

※ Example of wiring when using multiple units of servo drives.

Multiple servos can share a single circuit breaker or noise filter. Always select a NFB or noise filter that has enough capacity for the total power capacity of that system.

※ Recommended noise filter

Servo drive	FDA7001 ~ FDA7030/30B	FDA7045
NOISE FILTER	NFZ-4030SG (30A)	NFZ-4040SG (40A)

♥ Recommended manufacturer: Samil Components (www.samilemc.com)

Appendix III

Parameter table

Appendix III shows the full table of parameters mentioned in the manual.

III.1 Parameter table	III-1
-----------------------------	-------

III.1 Parameter table

Parameter No.	Menu explanation	Unit	Setting range	Default set value	Control type
StE-01	Display select	-	100 ~ 1330	1203	Speed/Torque/Position
StE-02	Command Speed	rpm	-9999.9 ~ 9999.9	-	Speed/Position
